| V280 | CEEB3 Q130:V280/1992 Country- specific weighting factor | Weighting factor - country |

This variable contains weights that adjust the weighted samples to make them representative for the countries from which they were drawn (according to highest level of education completed within age and to the regional distribution of the country's adult population if possible).

Note:

Where possible, the results for each country were post-weighted by a matrix of highest level of education completed within age, and also according to the regional distribution and sex of the country's adult population. Where information was not available for education within age, the results were weighted by each factor separately, and also by region. Weighting by an interlocking matrix of age and education was possible in Belarus, Czech Republic, Estonia, Georgia, Hungary, Lithuania, Poland, European Russia, Slovakia, Slovenia and Ukraine.

ATTENTION: The variable Country- specific weighting factor (V280) is not available for all countries and for some it excludes a large number of respondents from calculation (weighting factor = 0). The user is recommended not to weight CEEB 3 data or respectively to compare analysis results for weighted and

CEEB3 1992 - ZA2321

| | Question Text | |
| | unweighted data. The results as published in the official CEEB 3 report < http://www.za.uni-koeln.de/data/en/eurobarometer/ec_reports/ceeb3_report.pdf > are based on weighted data; for selected variables the reproduction of these tables when using COUNTRY WEIGHT (V280) has been proofed. It can not be located if the weighting factor as received by ZA was damaged at an earlier processing stage (e.g. by erroneous variable format definitions). Please notice that weighted results at least for active variables (e.g. EDUC) considerably differ from unweighted results. | |
