V280	CEEB6  V280 This variable contains weights that adjust the weighted samples to make them representative for the countries from which they were drawn (according to highest level of education completed within age and to the regional distribution of the country's adult population if possible). Please use it with caution!  Note: The results for each country were post-weighted by a matrix of highest level of education completed within age, and also according to the regional distribution and sex of the country's adult population. This was the Case for Armenia, Belarus, Bulgaria, Czech Republic, Slovakia, Hungary, Lithuania, Romania, Russia, Ukraine, Georgia. Slovenia and Kazakhstan were also weighted in this way, but as the distribution of age did not fully correspond to the requirements; age was used on top of the matrix to guarantee the distribution. For the countries Albania, Croatia, Estonia, Latvia, FYROM and Poland, no statistical data were available for this matrix. In these cases the weighting according to age and education was carried out separately. The data for each country's population by sex, age, education and region was prepared by the participating institutes.	Weighting factor - country
