*TO BE READ TO THE RESPONDENT*

**F**irstly, I would like to say something about the interview method we are using. The questions I am going to pose are printed in this questionnaire. The questionnaire consists of two parts. The first part contains questions concerning the entire household and its members. The second part consists of questions concerning your individual health, labour activity and personal opinions.

The same procedure will be followed for all households drawn out to participate in the survey. It is, however, difficult to construct questions equally suitable to everyone. But I would be grateful if you answer to the best of your ability, even if the questions seem not very well suited to your situation.

All the information received in this interview will be kept strictly confidential, and none of this information will be presented in a way making it traceable back to you. All data will be used only by the State Committee of Statistics (*give appropriate*) for creating anonymous, statistical material on the living conditions of the population of (*name country/region*). All persons who take part in the survey have been sworn to secrecy, and are under threat of criminal prosecution if they divulge personal information collected in the survey to other persons or institutions.
