## Acknowledgements

---

Standard & Special Eurobarometer surveys are conducted on behalf of the European Commission, under the responsibility of the Directorate-General Communication and on occasion requested by other departments according to the policy they deal with. From the outset the European Commission is generously granting access to Eurobarometer primary data for re-use in social science research and training.

The integrated original datasets and related materials are delivered by the respective survey research institute in charge of survey implementation and fieldwork co-ordination.

Preparation and documentation of Eurobarometer primary data for long term preservation and usability happen in a cooperative arrangement between the teams at Inter-University Consortium for Political and Social Research (ICPSR) and GESIS Data Archive for the Social Sciences.

## Introduction and preliminary remarks

---

The variable reports of the Standard & Special Eurobarometer survey series offer a comprehensive description of the data on study and variable level. For each Eurobarometer individual variable reports are provided. The reports are structured into five sections: Section one provides the description of the respective Eurobarometer Study, including bibliographic information, abstract, methodological specifications, remarks on weighting and general notes on data preparation. Section two gives an historical overview of the Eurobarometer Survey Series, including the institutional background and the development of geographical and topical coverage. A third section provides general information about the structure of Eurobarometer datasets, documentation standards and variable coding frames. Section four explains the details of the 'Variable Documentation' part in the following section five, which is the documentation of the variables with the complete question texts and answer categories of the master questionnaire and the corresponding archival remarks on data preparation or inconsistencies, if applicable. In addition, this variable report contains frequency counts, by country (sample), for almost all variables. These frequencies are based on weighted data using the adequate post-stratification weight, if applicable and as indicated in each table.

### Data access

Primary data for statistical analysis and related documentation (basic bilingual questionnaires, national field questionnaire versions and variable reports) are made available online by GESIS (<http://zacat.gesis.org>), by the Inter-university Consortium for Political and Social Research through the ICPSR membership network, and through all Social Science Data Archives members of the Council of European Social Science Data Archives (CESSDA).

### Usage requirement

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about related research activities, users of the data are requested to send to ICPSR or GESIS respectively bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data (surveys and respective variables) were used.

### Disclaimer

The original collector of the data, ICPSR, GESIS, and the relevant funding agencies bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

## 1.2 Content

### 1.2.1 Abstract

This round of Eurobarometer surveys diverged from the standard Eurobarometer measures and queried respondents on (1) foreign languages, (2) biotechnology, (3) organized crime and corruption, (4) health consciousness, (5) smoking, (6) AIDS prevention, (7) medical errors, and (8) consumer rights. For the first topic, foreign languages, respondents were asked to identify their native language, and first, second, and third foreign languages spoken, including proficiency and frequency of use. In addition, respondents were asked to identify the main reasons to learn a new language, methods used in learning, and barriers preventing learning. Respondents' opinions were sought regarding the best age to start learning a first and second new language, language support, and whether there should be a common language used throughout the European Union (EU). For the second topic, respondents were asked about their understanding of biotechnology, including gene therapy, pharmacogenetics, genetically modified foods and plants, nanotechnology, stem cell research, and its application in industry. Respondents' opinions were sought regarding the use of these techniques, governing safety and regulatory processes, new technology development, and integration of biotechnology into society. Respondents were also queried about their knowledge of science and politics and discussion of these matters with others, their opinions regarding entity involvement, including the EU, in utilizing or advancing biotechnology, and their personal political involvement in this area. For the third topic, organized crime and corruption, respondents were asked to identify the degree of national corruption, sources where corruption exists, a regulatory force in reducing it, and any personal involvement with corruption, in addition to providing an opinion about whether information sharing or policy development may reduce corruption. For the fourth topic, health consciousness, respondents were asked about their current state of health, breastfeeding, dieting, views on eating, foods consumed, changes in eating or drinking patterns and associated reasons for these changes, ease of and barriers to eating healthily, and exercise. Respondents were asked about their knowledge of sports and physical activity, and their opinion about obesity among adults and children. For the fifth topic, smoking, respondents were asked about their smoking habits and use with other substances, sensitivity to smoke, knowledge about second-hand smoke, exposure to tobacco cessation campaigns, and the likelihood of quitting. In addition, respondents were asked to provide an opinion about smoking bans in public places and the consumption of alcohol and tobacco among pregnant women. For the sixth topic, AIDS prevention, respondents were asked about their knowledge of AIDS transmission, changes in personal behaviors influenced by AIDS, and their opinions regarding current national measures in managing the AIDS pandemic and the potential coordination with the EU. For the seventh topic, medical errors, respondents were asked about their awareness of incidents of medical errors in their country, the significance of those errors, personal experience of a medical error, the likelihood of avoiding an error, and their degree of concern about suffering a medical error. For the eighth and final topic covered by this survey, consumer rights, those respondents living in Poland were asked about where and how often they saw or heard information about consumer rights, how frequently the media talked about consumer rights, and who in the media was the source of this information. Respondents were also asked whether they had heard a particular message and to define the meaning of that message, to evaluate Poland's consumer rights in comparison to other EU countries, and to assess the effectiveness of the justice system in protecting consumer rights. In addition, respondents were queried about their knowledge of consumer rights in certain situations, which organizations they would trust to provide correct advice and information about consumer rights, and whether they would refer others to a specific organization that deals with consumer rights, Federacja Konsumentow. Demographic and other background information includes respondent's age, gender, height, and weight, nationality, origin of birth (personal and parental), religious affiliation and involvement, marital status, left-to-right political self-placement, occupation, age when stopped full-time education, household composition, use of a fixed or a mobile telephone, size of locality, region of residence, and language of interview.

## 1.3 Universe

In all, Eurobarometer 64.3 interviewed 29.193 citizens of the 25 countries in the European Union after the 2004 enlargement, in the remaining Accession Countries (AC) Bulgaria and Romania and Candidate Countries (CC)

Croatia and Turkey, and among the Turkish Cypriote Community (TCC). All respondents were residents in the respective country, nationals and non-nationals but EU-citizens, and aged 15 and over. They were supposed to have sufficient command of one of the respective national language(s) to answer the questionnaire. Separate samples were drawn for Northern Ireland and East Germany.

## 1.4 Sampling procedure

A multi-stage, random (probability) sampling design was used for this Eurobarometer. In the first stage, primary sampling units (PSU) were selected from each of the administrative regional units in every country (Statistical Office of the European Community, EUROSTAT NUTS 2 or equivalent). PSU selection was systematic with probability proportional to population size, from sampling frames stratified by the degree of urbanization. In the next stage, a cluster of starting addresses was selected from each sampled PSU, at random. Further addresses were chosen systematically using standard random route procedures as every Nth address from the initial address. In each household, a respondent was drawn, at random, following the closest birthday rule. No more than one interview was conducted in each household.

The regular sample size (in the sense of completed interviews) is 1000 respondents per country, except the United Kingdom with separate samples for Great Britain (1000) and Northern Ireland (300), Germany with separate samples for the Eastern (500) and the Western part (1000), and Luxembourg, Cyprus (Republic), Malta, and Cyprus (TCC) with 500 interviews each. The effective number of realized interviews in this round is indicated in table 1.

## 1.5 Fieldwork

From November 05 to December 07, 2005, the TNS Opinion & Social, a consortium created between Taylor Nelson Sofres and EOS Gallup Europe, carried out the fieldwork for this Eurobarometer, at the request of the European Commission, Directorate General Press and Communication, Opinion Polls. TNS Opinion & Social is based at Avenue Herrmann Debroux, 40, 1160 Brussels, Belgium. TNS Opinion & Social coordinates the fieldwork carried out through its network of national institutes.

## 1.6 Mode of data collection

In all countries, fieldwork was conducted on the basis of detailed and uniform instructions prepared by TNS Opinion Social. Interviews were conducted face-to-face in people's home in the appropriate national language. As far as the data capture is concerned, CAPI (Computer Assisted Personal Interview) was used in those countries where this technique was available.

Equivalent French and English basic questionnaires were developed for this Eurobarometer. These questionnaires were translated into other languages by the firms responsible for interviewing in each country. Backtranslation procedures were applied for controlling semantic equivalence.

## 1.7 Weighting

In general the Standard and Special Eurobarometer data sets provide for two types of weighting, a post-stratification sample weighting and a population size weighting.

For each sample, i.e. participating country or lower level region, a comparison between the sample composition and a proper universe description is carried out for internal weighting purposes. The universe description is made available by the National Survey Research Institutes and/or by EUROSTAT. On this basis a national weighting procedure, using marginal and intercellular weighting, is applied. As such in all countries, minimum sex, age, region NUTS II (basic regions as defined by the EUROSTAT nomenclature of territorial units for statistics), and size of locality are introduced in the iteration procedure. This **post-stratification weighting** is also referred to as redressment or non-response weighting. A design weight which would adjust for unequal selection probabilities (depending on the household size) is not made available.

For the descriptive analysis of individual samples or their comparison, up to six weighting variables are provided in each data set and documented as such in the variable description. Until Eurobarometer 31 the corresponding weight variable is labelled NATION WEIGHT II. Weighting factors were then not included continuously for all samples and weighting procedure might have differed from the foregoing description. While weighting usually reproduces the real number of cases for each sample, between Eurobarometer 33 and 54.1 samples can also be adjusted to their predefined standard size of exactly 1000 or 500 cases. This option was applied for the official Eurobarometer reports of the period.

The **population size weighting** factor corrects for the fact that most samples are of almost identical size, no matter how large or small the populations are from which they were drawn. These weights ensure that each country as well as each lower level sample (Great Britain and Northern Ireland, East and West Germany) are represented in proportion to its population size within different groupings, or according to the historical states of European unification (e.g. founder members, new members, Euro zone) in the case of the EUROPEAN WEIGHTS, or for the United Kingdom (WEIGHT SPECIAL UNITED KINGDOM, NATION WEIGHT I until Eurobarometer 31) and

for Germany as a whole (WEIGHT SPECIAL GERMANY).

The population size weights all include the post-stratification weighting factors. The EUROPEAN WEIGHTs adjust each sample in proportion to its share in the total population of the European Union (formerly European Community), aged 15 and over. These adjustments are based on population figures published by EUROSTAT in the Regional Statistics Yearbook. In some cases more than 20 European weights are provided for use in analyses of the European Union population as a whole or in accordance with its historical compositions. Between Eurobarometer 33 and 54.1 adjustments to the predefined standard sample size is taken into account. In general all samples which do not belong to the respective group of samples under consideration are excluded from calculation.

The application of post-stratification weights is recommended for descriptive (univariate) analysis. Meaningful descriptive results for groups of countries or for countries with separate samples (United Kingdom and Germany) require population size weighting. Official Eurobarometer reports are always based on weighted data.

Starting with Eurobarometer 66.2 a new additional weight (WEIGHT EXTRA) is provided which extrapolates the actual universe (population aged 15 or more) for each country or sample. This weight variable integrates all other available weights, but does not reproduce the number of cases in the data set, but the respective actual population size.

As needed, OVERSAMPLES (see chapter 2.4, table 4) are weighted separately as documented in the respective study and weight variable description. In some surveys special weights are made available for application with selected variables on a specific topic, e.g. for the descriptive analysis of variables regarding e-communication equipment on HOUSEHOLD level.

**Eurobarometer 64.3** provides three (post-stratification) NATION WEIGHTS: W1 (WEIGHT RESULT FROM TARGET) for separate analysis or comparison of individual samples (countries or regions on sub-national level), W4 (WEIGHT SPECIAL UNITED KINGDOM) which in addition adjusts the British and the Northern Irish samples to their respective proportions in the United Kingdom for descriptive analysis of the United Kingdom as a whole, and W3 (WEIGHT SPECIAL GERMANY), which adds the adjustment of the East and West German samples to their respective proportions in the United Germany, to be used for descriptive analysis of the United Germany as a whole. W3 and W4 exclude all other countries from calculation, but include the post-stratification factors for the United Kingdom and Germany respectively.

The EUROPEAN WEIGHTS provide adjustments for each (national) sample in proportion to its share in the total population aged 15 and over, of the European Union, within groups of member countries, of accession or candidate countries, and of Euro zone countries, representing different historical states of European integration (e.g. EU6 = six founder members) . All post-stratification factors are included.

Table 2: Overview of population size weights

European Weights in Eurobarometer 64.3	Function
W5 to W9, W11, W14	grouping EU member countries
W10, W13	grouping new member countries
W15, W18, W19	grouping candidate/accession countries
W16	grouping member + candidate/accession countries
W12	grouping (non-)Eurozone countries

For more detailed information on the individual weights please see the corresponding variable description.

## 1.8 Data preparation

The data received by GESIS from TNS Opinion & Social were checked for completeness, missing and duplicate records, for illegal (wild) codes and for (formal) consistency of response patterns and question routing. Errors discovered by these procedures are documented or corrected, as a general rule after consulting the data provider. Indices and other derived summary variables were also checked and corrected as necessary. Complete machine-readable DDI-XML compliant documentation was created for this dataset by GESIS.

GESIS added "Inappropriate" (Inap.) codes to indicate intentionally skipped questions when it could be determined that the appropriate skip instruction in the original questionnaire was adhered to for (almost) every respondent.

Users should note that answers to multiple-response questions are (originally) represented by a series of binary "dummy" variables (i.e. variables which take on values of one and zero only), creating separate "dummy" variables to explicitly represent "Don't know", "No answer" or other residual responses, such as "None of the above". GESIS has recoded these residual responses in the case of inconsistencies with respect to the series of substantial answers.

GESIS has recoded the missing answers (NA) represented in the original data set by blanks (system missing) to standard values. Their practically complete absence suggests that eventual cases of not explicitly coded item non-response, might be collapsed with the DK (don't know) category.

Question text and contingency text appearing in the variable description is taken from English language version of the basic (bilingual) questionnaire. Coding schemes and other documentation are based on the English language version of the basic (bilingual) questionnaire or on the respective SPSS data definition statements as provided by TNS Opinion & Social. In case of any discrepancy between questionnaires, SPSS definitions and data regarding the coding scheme of a variable, GESIS as a general rule carried out any correction in agreement with the data provider.

If the documentation for country-specific questions or answer categories is provided in another languages than English, GESIS documents the original language wording and supplies the English translation in brackets. Specific information on data preparation or inconsistencies is noted on variable level.

## 1.9 Further remarks

The topical module FOREIGN LANGUAGES (QA1 to QASD5b) was not surveyed in Northern Cyprus (TCC).

The topical modules SCIENCE&TECHNOLOGY: BIOTECHNOLOGY (QB1 to QB24) and FIGHT AGAINST CRIME: ORGANIZED CRIME AND CORRUPTION (QC1 to QC8) were not surveyed in Romania, Bulgaria, Turkey, Croatia, and Northern Cyprus (TCC).

The HEALTH modules on SMOKING HABITS (QE1 to QE14), AIDS PREVENTION (QF1 to QF4), and MEDICAL ERRORS (QG1 to QG8) were only asked in Romania, Bulgaria, Turkey, Croatia, and Northern Cyprus (TCC). In the EU member countries these questions were surveyed in the framework of Eurobarometer 64.1 (ZA4413).

The topical module on CONSUMER RIGHTS (QH1-QH21) was also surveyed the framework of Eurobarometer 63.5 (ZA4412), in both studies only in Poland.

Standard trend questions are not included in this round

## 2 Eurobarometer Series Description

---

### 2.1 Series name

The Standard and Special Eurobarometer (a.k.a. Euro-Barometer) Survey Series

### 2.2 Series information

The Standard and Special Eurobarometer surveys are the products of a unique program of cross-national and cross-temporal survey research. The effort began in early 1970, when the Commission of the European Communities sponsored simultaneous surveys of the publics of the European Community. In general they are carried out in spring and fall of each year. Three pilot studies were conducted in 1970, 1971 and 1973 under the header of European Communities Studies; "Attitudes towards Europe" (GESIS id ZA0078), the very first comparative survey across European Communities founder members in 1962, can be seen as an early forerunner. The primary data of the first explicit Eurobarometer, conducted in spring 1974, have not been preserved.

### 2.3 Principal investigators and institutional background

The Eurobarometer program was initially launched and managed until 1986 by Jacques-René Rabier, head of the Commission's press and information directorate and afterwards special advisor to the Commission of the European Communities. He counted with the political support of the European Parliament and the close co-operation of Ronald Inglehart. The political scientist at the University of Michigan was then developing his theory of value change in modern societies and his materialist/post-materialist items would become integral part of the Eurobarometer until the mid nineties. Between 1987 and 1996 the program was continued and considerably enlarged under the direction of Karlheinz Reif, since 1993 together with Anna Melich.

Anna Melich took over the Eurobarometer direction from 1997 to 1999, by then still within the organizational framework of the former Directorate-General X, Public Opinion Surveys and Research Unit. In 2000/2002 Eurobarometer were intermittently conducted in the framework of the DG Education and Culture, Citizens' Centre - Analysis of Public Opinion under the direction of Harald Hartung, and starting with Eurobarometer 54 under DG Press and Communication, initially directed by Thomas Christensen. Since 1999 the organisation and supervision of the surveys were consecutively executed by Rubén Mohedano-Brèthes (until 2002) and Renaud Soufflot de Magny (until 2006), with Antonis Papcostas as head of unit between 2003 and 2010.

The main survey results are regularly published on the European Commission's Public Opinion website in official standard and special topic reports.

### 2.4 Development of geographical and population coverage

In all European Union (formerly "European Communities") member countries Standard Eurobarometer samples were initially drawn among the national population, aged 15 and over. Starting with Eurobarometer 41.1 the target population is the population of any nationality of an European Union member country, aged 15 years and over, resident in any of the Member States. For test purposes Eurobarometer 41.0 included a non-national European Union citizens oversample.

Eurobarometer regularly include all member countries, starting with the six founder members and in accordance with the subsequent enlargement process. Norway has been in-officially included in selected waves between 1989 (EB34) and 1996 (EB46), Finland started before the actual enlargement in 1993 (EB39.0), and a few Swiss Eurobarometer were run in parallel to selected waves or topics starting in 1999 (EB51.1) in Switzerland. Candidate Countries (CC) and Accession Countries (AC) for the Eastern enlargement process were first surveyed in the Candidate Countries Eurobarometer series (2001-2004) and then all included in the standard series, even before accession as in the cases of Turkey or Macedonia.

Additional samples are drawn for Great Britain and Northern Ireland almost from the start, in Germany (East and West) after the re-unification in 1989, and in Cyprus for the Turkish Cypriote Community (Northern Cyprus) since 2004 for selected standard and topical waves.

The regular standard sample size (in the sense of completed interviews) in Eurobarometer surveys is 1000 respondents per country, except small countries like Luxembourg or Malta. The 44.2bis MEGA-survey increased the standard sample up to 6000 respondents (for the largest countries) in order to achieve more confidence for analysis on sub-national level.

Oversamples have been drawn intermittently if required by the topic, i.e. to ensure that there are enough members of the relevant population subgroup to report sufficiently reliable estimates. Intentionally more people are selected from the respective group than would typically be done if everyone in the sample had an equal chance of being selected.

## 2.5 Standard question program and special topics

Standard Eurobarometer surveys were designed to provide a regular monitoring of the social and political attitudes among the European publics, to obtain regular readings of support for European integration, public awareness of and attitudes toward European unification, the institutions of the European Community / European Union, and its policies in complementary fashion. Attitudes toward the organization and role of the European Parliament and electoral behavior became a major topic in pre- and post- European Elections times. The standard program was complemented by measures of general socio-political orientations, of subjective satisfaction and the perceived quality of life, or of cultural, national and European identities.

Intermittently Standard Eurobarometer have investigated SPECIAL TOPICS, such as agriculture, biotechnology, energy, environment, family planning, gender roles, health related issues, immigration, poverty and social exclusion, regional identity, science and technology, information society, working conditions, urban traffic, knowledge of languages etc. In the case of some supplementary studies, special youth and elderly samples have been drawn (see table 4).

Starting with Eurobarometer 34 (1990) additional supplementary surveys on special issues have been conducted under each main wave number, identified by dot-separated sub-numbers for each individual survey. Usually only one survey per main wave includes the standard and trend module with focus on European integration issues. The following list (table 5) identifies the surveys containing the standard module and with results reported in the corresponding official standard report, or which at least include a subset of standard indicators, or with focus on European integration in a special topic context (e.g. "The future of Europe" in Eurobarometer 65.1).

## 3 Dataset structure and standards

---

Standard and Special Eurobarometer are processed and documented by the Inter-university Consortium for Political and Social Research (ICPSR) and by the GESIS Data Archive department in accordance with agreed standards, which may in some details diverge from the usual ICPSR or GESIS archive standards. In addition and as long as reasonable it was adhered to standards once established for the Eurobarometer series in the course of the years.

### 3.1 Dataset structure

In general the variable structure of the analysis dataset is aligned to the basic bilingual questionnaire, preceded by a set of technical variables. These comprise the archive identification variables (archive study and version id), the survey identification variables (wave and unique respondent id), and several standard NATION variables identifying the different samples (countries or regions) and relevant groups of samples in the dataset with the corresponding WEIGHT variables provided by the fieldwork institutes (see 1.7). A special alphanumeric NATION variable is provided based on the ISO 3166 country code standard for the purpose of breaking down variables by sample in terms of clearly summarized cross-tabulations.

The questionnaire variables usually consist of three types, the substantial questions (Q), the Eurobarometer standard demographics (D) and the interview protocol variables (P). The dataset is concluded by constructed index variables (C), usually as provided by the fieldwork institute, by a questionnaire SPLIT variable if applicable, and by further original identification variables.

Variable names consist of the standard prefix 'V' and the consecutive variable number, except ISOCNTRY and VERSION variables if subsequently added to older datasets. Variable labels are standardized in the sense that they provide keywords based on the question text and that these keywords are applied consistently if questions or question items are repeated over time (trend variables). Variable label may include abbreviations if required, e.g. limitations regarding the length of variable labels in older versions of statistical analysis software. Starting with Eurobarometer 33 the variable labels include the respective question number as a reference to the basic bilingual questionnaire.

### 3.2 Coding frames

By general rule, the variables adopt the coding frame as specified in the basic bilingual questionnaire, except multiple response questions (see 1.8), questions with country specific answer categories and missing values.

#### 3.2.1 Country specific answer categories

Eurobarometer include some questions (variables) with country specific answer categories like INCOME, SIZE OF COMMUNITY, REGION or variables related to VOTING BEHAVIOUR with reference to POLITICAL PARTIES. Until Eurobarometer 48 only one integrated variable is supplied with each category representing country specific meanings (e.g. geographic regions) which are not documented within the analysis dataset by means of value labels, but only in the extended variable description in the variable report. Starting with Eurobarometer 49 the integrated variables are retained but complemented by completely labeled country specific variables. The country specific coding schemes and categories are maintained as a standard over time as long as the category schemes

provided in the questionnaire are remain comparable.

Special attention is given to the coding of POLITICAL PARTIES in voting behavior variables such as VOTE INTENTION or LAST VOTE based on a standard coding scheme, originally developed for the Eurobarometer by Ronald Inglehart.

Starting with Euro-Barometer 2 the coding of this variable has been standardized following an approximate ordering of each country's political parties along a "left" to "right" continuum in the first digit of the codes. Parties coded 01-39 are generally considered on the "left", those coded 40-49 in the "centre", and those coded 60-89 on the "right" of the political spectrum. Parties coded 50-59 cannot be readily located in the traditional meaning of "left" and "right". The second digit of the codes is not significant to the "left-right" ordering. Codes 90-99 contain the response "other party" and various missing data responses. Major "party families" like the Social Democrats or Conservatives have been assigned identical values across countries, if possible.

From Eurobarometer 69.2 onwards, the "party family" harmonization approach has been sharpened following and updating the coding scheme developed by ZEUS for the Mannheim Eurobarometer Trend File. This ZEUS Code of Party Families is country specific, i.e. the categories have different meanings for different countries. It has three digits: The first represents the party family, the second and third identify an individual party in this family. Individual parties are coded consistently over time. The assignment of parties to families is done according to their overall ideological orientations.

Table 6: ZEUS Party Family Code (slightly modified)

Category		Party Family
0	(001-099)	not affiliated / electoral alliances across "families"
1	(100-199)	Communists
2	(200-299)	Socialists
3	(300-399)	Liberals
4	(400-499)	Christian Democrats
5	(500-599)	Conservatives
6	(600-699)	Extreme Rights / Nationalists
7	(700-799)	Regionalists / Ethnic
8	(800-899)	Environmental parties
9	(900-949)	Agricultural parties
9	(950-989)	other special issue parties (e.g. Eurosceptics) and independents
	990	other (spontaneous)
	994	not voting age
	995	empty ballot (blank) or invalid vote
	996	not voted / would not vote
	997	Refused
	998	DK / DK+NA if NA not coded separately
	999	INAP (inappropriate)

If available, the former standard category used up to Eurobarometer 61 is always referenced in the variable description. Due to general changes in party systems and to the ideological development of individual political

parties, the assignment of parties to party families cannot claim general validity. Users may modify these codings or part of these codings in order to suit their specific needs.

### 3.2.2 Missing values

In general missing value codes are defined in accordance with the standard once established for the Eurobarometer series, in particular the default use of whatever value supplied by the basic questionnaire for DK ("don't know") responses, unless a standard coding scheme is applied for demographic or protocol variables. The value 0 is applied for NA (i.e. "not ascertained" resp. "no answer") and the value 9 (99, 999, ...) for INAP (i.e. "inappropriate" resp. "not applicable"). If one of these values falls into the valid range of codes, the missing values are shifted to the next available missing value code or "level", e.g. if 0 is used in a dichotomous variable (NOT MENTIONED), value 9 is used for NA, respectively value 8 if value 9 is already used for INAP. If necessary the corresponding two- or more digit codes are used (99, 999, 98, 998 ...). Recently separate missing values are coded for INAP depending on whether the respondent was not asked a question due to questionnaire routing (filter non-response) or whether the question was not provided for in the country's field questionnaire. Other missing values (e.g. REFUSAL) are coded with the in each case next available code (e.g. 7, 97, 997, ...). In the analysis data set these codes are by default declared and treated as USER MISSING, but may be modified by the user to suit specific needs.

### 3.3 International documentation standard

The variable documentation is set up in accordance with the international metadata specifications for the social and behavioural sciences, established by the Data Documentation Initiative <DDI>. The variable reports are based on the XML representation of DDI version 2. The documentation combines the exact wording and sequence of question components (question text, interviewer instruction, response categories, etc.) from the basic bilingual (master) questionnaire with the variable description (variable name, values, and labels) of the analysis dataset. General remarks and comments referring to a certain variable are defined as variable notes. Notes can be references to trend (comparability) information, standards applied for coding frames, problems in questionnaire translation, but also references to data problems or other specific characteristics.

## 4 Explanation of the variable documentation

---

The variable documentation part describes each variable in the analysis data file in terms of relevant metadata and frequency distributions. The variable documentation is set up by means of the GESIS Dataset Documentation Manager (DSDM) and in accordance with international metadata standards (DDI-Codebook/XML).

In general, the following abbreviations are used to indicate countries or (sub-national) areas. As far as applicable, the ISO 3166-1 alpha-2 country codes have been applied and coded accordingly in the alphanumeric sample identification variable (NATION – ALL SAMPLES ISO 3166).

AT	Austria	HR	Croatia
BE	Belgium	HU	Hungary
BG	Bulgaria	IE	Ireland
CY	Cyprus	IT	Italy
CY-TCC	Turkish Cypriote Community	LT	Lithuania
CZ	Czech Republic	LU	Luxembourg
DE	Germany (–1989)	LV	Latvia
DE-W	Germany West (1990 ff.)	MK	Macedonia (FYROM)
DE-E	Germany East (1990 ff.)	MT	Malta
EE	Estonia	NL	The Netherlands
ES	Spain	PL	Poland
FI	Finland	PT	Portugal
FR	France	RO	Romania
GB	United Kingdom	SE	Sweden
GB-GBN	Great Britain	SI	Slovenia
GB-NIR	Northern Ireland	SK	Slovakia
GR	Greece	TR	Turkey

The example explained below reproduces the information appearing in the variable documentation part for a typical substantive variable. Results are usually broken down by country (sample) or represented by frequency counts in the case of country specific variables. In the case of variables with long lists of coded “real” values (e.g. age), results are only presented for the corresponding categorized variable, if available. The content and construction of technical, administrative or other generated variables is described as appropriate.

The frequencies for substantive variables are calculated on the base of weighted data, as indicated with each table and in accordance with the European Commission’s official Eurobarometer reports. Typically the sample specific post-stratification (redressment) weight is applied (WEIGHT RESULT FROM TARGET or NATION WEIGHT II). Due to rounding, users may find slightly different figures if using other statistical packages, especially if the number of cases is very low.

The complete question and answer texts are taken from the English language part of the respective basic bilingual questionnaire (master questionnaire) as provided by the coordinating fieldwork institute.

	Sum		29193	100.0	100.0
	Valid Cases		29193		

v3 - EDITION NUMBER

ZA / ICPSR Edition Number

The number identifying the release edition of this data set.

1 1st GESIS-ZA edition as of September 5, 2008

Note:

Please see variable VERSION ("GESIS ARCHIVE VERSION") for further information on the version number of this data set and the corresponding release date.

v3

#### version - GESIS ARCHIVE VERSION

##### VERSION AND RELEASE DATE OF THE ARCHIVE DATA SET

This variable identifies the GESIS archive version number of this data set and the corresponding release date, recorded as an alphanumeric string. The version number is composed of a sequence of three numbers. The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases), the minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels), and the third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

On occasion of the implementation of this versioning scheme (2010-04-13), the default version number 1.0.0 has been created automatically for this Eurobarometer.

Version 1.0.1 adds the VERSION variable to the otherwise unchanged data set.

Former version or edition identification variables are maintained unchanged as a reference to former releases.

v7 - NATION - ALL SAMPLES ISO 3166

NATION - ALL SAMPLES ISO 3166

All surveyed countries and regions, i.e. including separate samples for East- / West-Germany, Great Britain / Northern Ireland, and the Turkish Cypriot Community (TCC), are coded in accordance with the ISO 3166-1-alpha-2 country code, if available. ISO 3166-2 is applied for the United Kingdom subdivisions. ISO standard codes are not available for the "historical" East / West subdivision of Germany (DE-E / DE-W) and for the Turkish Cypriot Community in northern Cyprus (CY-TCC), the internationally not recognized "Turkish Republic of Northern Cyprus".

v661 - QB6D GENET MOD FOOD - EVER HEARD (B)

Q.B6D

ASK Q.B and Q.C ONLY IN EU25 / SPLIT B (Q.B6D to Q.B6F & Q.B7D to Q.B7F)

Have you ever heard of genetically modified foods? Genetically modified foods are made from plants or micro-organisms that have had one or more characteristics changed by altering their genes. For example, a plant might have its genes modified to make it resistant to a particular plant disease, to improve its food quality, or to help it grow faster.

(SHOW CARD WITH THE DEFINITION: "Genetically modified foods are made from plants or micro-organisms that have had one or more characteristics changed by altering their genes. v668 - QB7D NANOTECHNOLOGY - EVER HEARD (B)

Q.B7D

ASK Q.B and Q.C ONLY IN EU25 / SPLIT B (Q.B6D to Q.B6F & Q.B7D to Q.B7F)

Have you ever heard of nanotechnology? Nanotechnology involves the construction of tiny structures and devices by manipulating individual molecules and atoms. Some applications of nanotechnology include: turning sea water into drinking water, implantable surgical devices to measure things like blood pressure, molecules to make wrinkle resistant clothes, and cosmetics that are absorbed by the skin.

(SHOW CARD WITH THE DEFINITION: "Nanotechnology involves the construction of tiny structures and devices by manipulating individual molecules and atoms. Q.B8A

ASK Q.B and Q.C ONLY IN EU25 / SPLIT A (Q.B8A TO Q.B12B)

Stem cell research involves taking human cells either from human embryos that are less than 2 weeks old that will never be transplanted into a women body or from the blood in umbilical cords. These stems cells can be used to grow new cells to treat certain diseases in any part of the body. Would you say that you are very, fairly, not very or not at all familiar with stem cell research?

v677 - QB10A STEM CELL RESRCH - APPROVAL UMBILIC (A)

Q.B10A

ASK Q.B and Q.C ONLY IN EU25 / SPLIT A (Q.B8A TO Q.B12B)

Now, I would like to ask you the same question under a different scenario. Suppose scientists were able to get all the stem cells they need for research from umbilical cords and no longer had to get them from embryos. Which of the following would best capture your view?

(SHOW CARD - READ OUT - ONE ANSWER ONLY)

- 1 I approve the use of stem cell research, as long as the usual levels of government regulation are in place
- 2 I approve of stem cell research if it is more tightly regulated
- 3 I do not approve of stem cell research except under special circumstances
- 4 I do not approve of stem cell research under any circumstances

v696 - QB8B BIOFUEL: PAY MORE FOR THE VEHICLE (B)

Q.B8B

ASK Q.B and Q.C ONLY IN EU25 / SPLIT B (Q.B8B TO Q.B11B)

Research is in progress on a number of industrial applications of modern biotechnology. One is the development of special crops that can be turned into ethanol as a substitute or additive for petrol and for biodiesel.

v700 - QB10B GENET MOD PLANTS - APPROVAL (B)

Q.B10B

ASK Q.B and Q.C ONLY IN EU25 / SPLIT B (Q.B8B TO Q.B11B)

Another application is the use of genetically modified plants in the production of medicines and pharmaceutical products. These genetically modified plants will be grown in enclosed green-houses and the expectation is that this could be a cheaper and more efficient way of manufacturing medicines. Which of the following best describes your views?

(SHOW CARD - READ OUT - ONE ANSWER ONLY)

- 1 I approve the use of genetically modified plants to make medicines, as long as the usual levels of government regulation are in place
- 2 I approve of genetically modified plants to make medicines if it is very tightly regulated
- 3 I do not approve of genetically modified plants to make medicines except under special circumstances
- 4 I do not approve of genetically modified plants to make medicines under any circumstances

v866 - QD15 VIG PHYS ACTIVITIES - LAST 7 DAYS

Q.D15

ASK ALL

In the last 7 days, on how many days did you do vigorous physical activities like lifting heavy things, digging, aerobics or fast cycling?

(CODE IN DAYS - IF "NONE" CODE '0' - IF "DK" CODE '9')

- 0 None
- 1 1 day
- 2 2 days
- 3 3 days
- 4 4 days
- 5 5 days
- 6 6 days
- 7 7 days
- 9 DK

Note:

Please notice that several respondents (in total 251 cases) indicate days "doing vigorous physical activities" (coded '1' to '7' in V866) while subsequently (V867/V868/V869) stating that they "never do vigorous physical activities" (code '0' in V867/V868/V869). This especially applies to Romania (58 cases), the Czech Republic (38 cases), Portugal (32 cases) and Croatia (26 cases).

v867 - QD16 VIG PHYS ACTIVITIES - DURATION

Q.D16

On days when you do vigorous physical activities, how much time do you usually spend at it?

(CODE IN HOURS AND/OR MINUTES ONLY - IF "NEVER DO VIGOROUS PHYSICAL ACTIVITIES" CODE '00' - IF "DK" CODE '99')

0 Never

1 1 minute

2030 20 hours 30 minutes

9999 DK

Note:

Please notice that several respondents (in total 251 cases) indicate days "doing vigorous physical activities" (coded '1' to '7' in V866) while subsequently (V867/V868/V869) stating that they "never do vigorous physical activities" (code '0' in V867/V868/V869). This especially applies to Romania (58 cases), the Czech Republic (38 cases), Portugal (32 cases) and Croatia (26 cases).

Variable V867 contains two measuring units (hours and minutes) and is therefore not suitable for calculations. Please refer to variable V869 (completely converted to minutes).

Actual number is coded.

Last trend: EB58.2, Q.51

v868 - QD16 VIG PHYS ACTIVITIES - DURATION (HOURS)

Q.D16 Vigorous physical activities duration in hours - RECODED

- 0 Never
- 1 Less than 1 hour
- 2 1 hour - 1 hour 59 minutes

- 5 4 hours 4 hours 59 minutes
- 6 5 hours - 5 hours 59 minutes
- 7 6 hours and more
- 9 DK

Derivation:

This variable collapses answers to V867.

Note:

Please notice that several respondents (in total 251 cases) indicate days "doing vigorous physical activities" (coded '1' to '7' in V866) while subsequently (V867/V868/V869) stating that they "never do vigorous physical activities" (code '0' in V867/V868/V869). This especially applies to Romania (58 cases), the Czech Republic (38 cases), Portugal (32 cases) and Croatia (26 cases).

See V867 for complete question text.

v869 - QD16 VIG PHYS ACTIVITIES - DURATION (MIN)

Q.D16 Vigorous physical activities duration in minutes - RECODED

0 Never

1 1 minute

1230 1230 minutes

9999 DK

Derivation:

This variable displays V867 in minutes.

Note:

Generated by the archive.

Please notice that several respondents (in total 251 cases) indicate days "doing vigorous physical activities" (coded '1' to '7' in V866) while subsequently (V867/V868/V869) stating that they "never do vigorous physical activities" (code '0' in V867/V868/V869). This especially applies to Romania (58 cases), the Czech Republic (38 cases), Portugal (32 cases) and Croatia (26 cases).

Actual number is coded.

See V867 for complete question text.

v871 - QD18 MOD PHYS ACTIVITIES - DURATION

Q.D18

On days when you do moderate physical activities, how much time do you usually spend at it?

(CODE IN HOURS AND/OR MINUTES ONLY - IF "NEVER DO MODERATE PHYSICAL ACTIVITIES" CODE '00' - IF "DK" CODE '99')

0 Never

1 1 minute

2100 21 hours 0 minute

9999 DK

Note:

Original code "99" recoded to "9999"

Please notice that several respondents (in total 412 cases) indicate days "doing moderate physical activities" (code '1' to '7' in V870) while subsequently (V871/V872/V873) stating that they "never do moderate physical activities" (code '0' in V871/V872/V873). This especially applies to Romania (85 cases), Czech Republic (75 cases), Croatia (72 cases) and Portugal (52 cases).

Variable V871 contains two measuring units (hours and minutes) and is therefore not suitable for calculations. Please refer to variable V873 (completely converted to minutes).

Actual number is coded.

v873 - QD18 MOD PHYS ACTIVITIES - DURATION (MIN)

Q.D18 Moderate physical activities duration in minutes - RECODED

0 Never

1 1 minute

1260 1260 minutes

9999 DK

Derivation:

This variable displays V871 in minutes.

Note:

Generated by the archive.

Please notice that several respondents (in total 412 cases) indicate days "doing moderate physical activities" (code '1' to '7' in V870) while subsequently (V871/V872/V873) stating that they "never do moderate physical activities" (code '0' in V871/V872/V873). This especially applies to Romania (85 cases), Czech Republic (75 cases), Croatia (72 cases) and Portugal (52 cases).

Actual number is coded.

See V871 for complete question text.

v875 - QD20 PHYS ACT WALKING - DURATION

Q.D20

On days when you walk for at least 10 minutes at a time, how much time do you usually spend walking?

(CODE IN HOURS AND/OR MINUTES ONLY - IF "NEVER WALK FOR AT LEAST 10 MINUTES AT A TIME" CODE '00' - IF "DK" CODE '99')

0 Never

1 1 minute

2100 21 hours 0 minute

9999 DK

Note:

Original code "99" recoded to "9999"

Please notice a high number of respondents (in total 1475 cases) indicating days "walking at least 10 minutes at a time" (coded '1' to '7' in V874) while subsequently (V875/V876/V877) stating that they "never walk at least 10 minutes at a time" (code '0' in V875/V876/V877). This especially applies to Croatia (377 cases), the Czech Republic (360 cases), Romania (331 cases), Slovakia (112 cases) and Portugal (108 cases).

Variable V875 contains two measuring units (hours and minutes) and is therefore not suitable for calculations. Please refer to variable V877 (completely converted to minutes).

Actual number is coded.

- 2 Yes, to some extent
- 3 No, not really
- 4 No, not at all
- 5 DK
- 9 Inap. (not coded any 1 in V903-V907; not coded 1 in V930)
- 99 Inap., EU countries (coded 1 to 28 in V6)

Note:

Multiple response questions are split into a set of dichotomized dummy variables (0 NOT MENTIONED / 1 MENTIONED) which represent each of the original categories and which are identified by the respective original category code as question number suffix. As a result the references to specific categories in the question text or in interviewer instructions should now be read as referring to the respective dummy variable if selected (code 1).

P.13\_LU Language of questionnaire: Luxembourg

- 1 Luxembourgish
- 2 French
- 3 German
- 9 Inap. (not coded 6 in V6)

Note:

Starting with Eurobarometer 62 and with the change of fieldwork responsibility to TNS, the relation between average frequencies for language categories "French" and "Luxembourgish" appears to be inversed. The majority of respondents in Luxembourg are now coded as being interviewed in French and not in Luxembourgish as former Eurobarometer surveys indicate. It could not be ascertained if TNS (intermittently) changed the fieldwork strategy regarding languages. Starting with Eurobarometer 69 the former proportion is recovered, again representing the actual proportion between Luxembourgish and French as mother languages in Luxembourg. This is probably also true for Eurobarometer 68.1 and 68.2 where the labelling in the data set (value label) is shifted compared to the field questionnaire.
