Introduction

The present bilingual variable documentation is a supplement to the English Variable Report published for the national dataset.

The English Variable Report not only includes an extensive description of the data on study and variable level, but also contains frequency counts for almost all variables. It can be accessed through the GESIS Data Catalogue (<http://gesis.org/data-catalogue/>) and ZACAT-Online Study Catalogue (<http://zacat.gesis.org/>).

Bilingual Variable Documentation eases the work process by offering a direct comparison of questions as in English Master Questionnaire on one side, and language versions in field questionnaire on the other. What is more, for comparative analyses users can easily access this type of documentation provided for all participating countries. By this, exploration of communalities and differences in question wording across countries/cultural contexts is supported.

An overview of available documentation accessible for all countries can be found on the EVS website: <http://www.europeanvaluesstudy.eu/evs/surveys/survey-1999-2000/participatingcountries/>

The graphic below shows countries sharing one or more languages in the blue boxes. Languages marked red show shared languages.

Languages fielded in EVS 1999

Integrated Dataset English Master Questionnaire						
Austria German	Belarus Russian	Belgium Flemish/Dutch French	Bulgaria Bulgarian	Croatia Croatian	Czech Republic Czech	Denmark Danish
Estonia Estonian Russian	Finland Finnish	France French	Germany German	Great Britain English	Greece Greek	Hungary Hungarian
Iceland Icelandic	Ireland English	Italy Italian	Latvia Latvian Russian	Lithuania Lithuanian	Luxembourg Luxembourgish French Portuguese	Malta Maltese
Netherlands Dutch	Northern Ireland English	Poland Polish	Portugal Portuguese	Romania Romanian		Russian Russian
Slovenia Slovenian	Spain Spanish	Sweden Swedish	Slovak Republic Slovak	Turkey Turkish	Ukraine Ukrainian Russian	

Comparisons between countries and language versions can be extended to the EVS 2008 for which bilingual documentation of national datasets is also available through the Data Catalogue and ZACAT.

Additionally, the [Online Variable Overview](#), which also allows for identification of trend variables across EVS waves (1981, 1990, 1999, and 2008), is provided by the GESIS Data Archive.

Explanation of Bilingual Variable Documentation

In the following pages, the English/original language documentation is provided.

The left part of the page depicts the variable documentation according to the English Master Questionnaire. It displays question number and text, response categories and missing values, additional notes referring to data, as well as applied standards, information on coding and harmonized variables.

On the right hand side, variables are documented in the original language fielded in given country. Question number and text, as well as response categories and missing values are displayed in original (fielded) language(s). Notes on this side refer to deviations between master and field questionnaire, translation problems, typing errors, and references to original country-specific variables. Besides, a standard note is added concerning the recoding and documentation of missing values in the national datasets.

For some countries missing values have been adopted and translated directly from data, for others they were documented according to the respective field questionnaires.
The Master Questionnaire contains two additional items: 'I don't know' (v28/v46) and 'No answer' (v29/v47) . They were first recoded into -1 and -2 for each item of the question battery. For reasons of comparability they have been recoded in a second step into 0 (not belonging to a voluntary organisation/'not doing voluntary work for those organisations') .	
In the Swedish questionnaire 'No answer' was not included.

Note:	Note:
Multiple response questions are split into a set of dichotomized variables (1 mentioned, 0 not mentioned) which represent each of the original categories and are identified by the respective original category code as question number suffix.	Question structure in Sweden slightly differs from master questionnaire. Answer categories 1, 4 correspond to 13-27 __A: 1 "yes, member"; 4 "No, not member". Answer categories 2, 3 correspond to 13-27 __B: 2 "Unpaid work: yes"; 3 "Unpaid work: no"
The Master Questionnaire contains two additional items: 'I don't know' (v28/v46) and 'No answer' (v29/v47). They were first recoded into -1 and -2 for each item of the question battery. For reasons of comparability they have been recoded in a second step into 0 (not belonging to a voluntary organisation/'not doing voluntary work for those organisations').	Missing values from field questionnaire were recoded into -1 to -5 in the datasets. Since the original language documentation was developed in cooperation between the participating countries, CEPS/Instead Luxembourg, and GESIS Data Archive, Cologne, the documentation of the missing values may differ from country to country. For some countries missing values have been adopted and translated directly from data, for others they were documented according to the respective field questionnaires.
In the Swedish questionnaire 'No answer' was not included.

Note:	Note:
Multiple response questions are split into a set of dichotomized variables (1 mentioned, 0 not mentioned) which represent each of the original categories and are identified by the respective original category code as question number suffix.	Question structure in Sweden slightly differs from master questionnaire. Answer categories 1, 4 correspond to 13-27 __A: 1" yes, member"; 4 "No, not member". Answer categories 2, 3 correspond to 13-27 __B: 2 "Unpaid work: yes"; 3 "Unpaid work: no"
The Master Questionnaire contains two additional items: 'I don't know' (v28/v46) and 'No answer' (v29/v47) . They were first recoded into -1 and -2 for each item of the question battery. For reasons of comparability they have been recoded in a second step into 0 (not belonging to a voluntary organisation/'not doing voluntary work for those organisations') .	Missing values from field questionnaire were recoded into -1 to -5 in the datasets. Since the original language documentation was developed in cooperation between the participating countries, CEPS/Instead Luxembourg, and GESIS Data Archive, Cologne, the documentation of the missing values may differ from country to country. For some countries missing values have been adopted and translated directly from data, for others they were documented according to the respective field questionnaires.
In the Swedish questionnaire 'No answer' was not included.

V96 - fair/unfair: quicker secretary is paid more (Q18)	fair/unfair: quicker secretary is paid more (Q18)
Q.18	49
Imagine two secretaries, of the same age, doing practically the same job. One finds out that the other earns £ 30 (Countries other than UK: Please use own currency) a week more than she does. The better paid secretary, however, is quicker, more efficient and more reliable at her job. In your opinion is it fair or not fair that one secretary is paid more than the other?	Vad anser du om följande? Två sekreterare har samma ålder och arbetar med ungefär samma saker. Den ena sekreteraren, A, får veta att den andra tjänar ungefär 1000 kr mer i månaden. Den andra sekreteraren, B, är emellertid snabbare, effektivare och mer pålitlig i sitt arbete. Tycker Du att det är rättvist eller orättvist att sekreterare B får mer betalt än den förste?

Now I'd like you to look at this card. I'm going to read out some different forms of political action that people can take, and I'd like you to tell me, for each one, whether you have actually done any of these things, whether you might do it or would never, under any circumstances, do it.	Nu skall vi fråga om hur Du ser på några aktuella samhällsföreteelser. Jag börjar med att läsa upp några olika saker som människor kan göra. Vill Du tala om för mig om Du har gjort något av detta, om Du skulle kunna tänka dig att göra det eller om Du aldrig någonsin, dvs under inga omständigheter skulle göra något av detta.

WVS question - Sweden (1999) :	167-171
Q.167	En del människor anser att FN är bättre på att ta hand om vissa problem än vad de enskilda länderna är, t ex när det gäller att bevara internationell fred, att skydda miljön, osv. Andra anser att sådana problem helt och hållet borde skötas av de berörda länderna själva, medan några säger att problemen borde skötas genom att FN samordnar insatser från de berörda länderna. Jag skall nämna några sådana problem. Anser Du att problemen borde skötas av de enskilda länderna själva, av FN eller genom att FN samordnar insatser från de berörda länderna?
Some people believe that certain kinds of problems could be better handled by the United Nations than by the various national governments. Others think that these problems should be left entirely to the respective national governments; while others think they would be handled best by the national governments working together with co-ordination by the United Nations. Different question and filter structure: retired/pensioned are filtered to v315 instead of v312.	
Variables v307 to v311 and v314 have not been implemented in the Swedish field questionnaire.	

Missing values from field questionnaire were recoded into -1 to -5 in the datasets. Since the original language documentation was developed in cooperation between the participating countries, CEPS/Instead Luxembourg, and GESIS Data Archive, Cologne, the documentation of the missing values may differ from country to country. For some countries missing values have been adopted and translated directly from data, for others they were documented according to the respective field

questionnaires.
