Introduction and preliminary remarks

The GESIS Variable Report Series on the International Social Survey Programme Studies offers a comprehensive description of data on study and variable level. For each annual module as well as for the cumulated data sets individual Variable Reports are provided.

The reports are structured into six chapters:

Chapter one gives a brief overview of the worldwide ISSP project as a whole.

Chapter two provides the description of the respective ISSP study including bibliographic information, abstract and methodological specifications.

Chapter three contains information on study related survey materials which are absolutely essential to understand the data properly, followed by general information about the structure of ISSP data sets, documentation standards and variable coding frames in **chapter four**.

Chapter five provides a short explanation of the variable documentation itself.

Chapter six contains the core variable documentation: the documentation of each variable including complete question texts with all answer categories of the Basic Questionnaire enriched with archival remarks. In addition, this Variable Report presents cross tabulations over countries for all substantial and most of the demographic variables. Archive, protocol and country specific variables are usually shown by descriptive statistics or frequency distributions. All cross tabulations, descriptive statistics and frequency distributions are based on unweighted data.

The appendix usually contains two sorts of survey materials: the Study Descriptions and, if available, the Characteristics of National Population, basic statistics for all the participating countries of the corresponding module. The data for the annual ISSP modules are collected by independent institutions in each country. The country data is integrated into one international data file, which is documented, distributed and long-term archived by the ISSP Archive, institutionally, the GESIS Data Archive for the Social Sciences (Leibniz Institute for the Social Sciences) in Cologne, Germany (<http://www.gesis.org>). In every second year from 1997 on, data and documentation have predominantly been prepared by our partners at JDS/ ASEP in Spain (<http://www.jdsurvey.com>).

Data access

Data for statistical analysis and related documentation are made available by the Data Catalogue (<https://dbk.gesis.org/dbksearch/>) or by ZACAT (<http://zacat.gesis.org>), the Data Online Platform of GESIS. Whereas the Data Catalogue also provides information such as version history and errata for data sets, ZACAT additionally enables users to analyse data online. Access to the Data Catalogue and ZACAT is free of charge, download of data sets requires registration.

Anonymised data

According to data regulations in participating countries, only anonymised data are made available. Each national team is responsible for carefully checking the data in this respect before the deposit.

Usage requirements

To provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about related research activities, all users of ISSP data are requested to send bibliographic citations for each completed manuscript or thesis abstracts to isspservice@gesis.org or if possible, please directly send a copy of the publication to GESIS (GESIS-Leibniz-Institute for the Social Sciences, Dept. Data Archive – ISSP, Unter Sachsenhausen 6-8, D-50667 Cologne, Germany). Please also observe the general notes on the usage regulations of GESIS Data Archive resources (<http://www.gesis.org/en/services/data-analysis/data-archive-service/usage-regulations/>).

Disclaimer

Neither the original collector of the data, nor GESIS or JDS/ ASEP bears any responsibility for the use of ISSP data or any data analyses.

Request

Please, alert us to any errors or problems that you might notice in the data or the documentation. All comments and remarks are very much appreciated to enhance the quality of the data: isspservice@gesis.org

1 ISSP Series Description

1.1 Series name

The International Social Survey Programme (ISSP)

1.2 Series information

The ISSP is a cross-national collaboration programme, which has been continuously conducting annual surveys on diverse social science topics since 1985. The topics for each ISSP survey are proposed by delegates from ISSP member countries. Then, a Basic Questionnaire is composed and improved over several years by a committee, elected by the General Assembly before it is pretested in various countries. Starting in 1984 with four founding nations - Australia, Germany, Great Britain and the United States, the ISSP meanwhile has grown up to almost 50 member countries covering various cultures around the globe.

ISSP Modules 1985 – 2015:

- Citizenship: 2004/ 2014
- Environment: 1993/ 2000/ 2010
- Family and Changing Gender Roles: 1988/ 1994/ 2002/ 2012
- Health and Health Care: 2011
- Leisure Time and Sports: 2007
- National Identity: 1995/ 2003/ 2013
- Religion: 1991/ 1998/ 2008
- Role of Government: 1985/ 1990/ 1996/ 2006
- Social Inequality: 1987/ 1992/ 1999/ 2009
- Social Networks: 1986/ 2001 (Social Relations and Support Systems)
- Work Orientations: 1989/ 1997/ 2005/ 2015

All ISSP members agree

1. to jointly develop modules addressing important areas of social science,
2. to field the modules either as an individual survey or as supplements to the regular national surveys and
3. to make the data available to the social science community as quickly as possible.

As the surveys are designed for replication they offer both cross-national and cross-time comparison, creating the base for a vast range of substantive and methodological research. Since there is no external fund agency, ISSP members fund their own surveys. Beyond that, ISSP committee members fund ISSP central coordination, networking, development of source questionnaires, or methodological work.

For more information on the ISSP in general, its working principles, contact addresses of ISSP members and principal investigators, please visit the ISSP web site (<http://www.issp.org>).

2 Study Description – International Social Survey Programme 2005

2.1 Bibliographic information

2.1.1 Archive study number

GESIS: ZA4350

2.1.2 Title

International Social Survey Programme: Work Orientations III - ISSP 2005

2.1.3 Authoring Entity/ Principal Investigators

Name	Affiliation
Gibson, Rachel	The Australian National University, Australia
Wilson, Shaun	Macquarie University, Australia
Dimova, Lilia	Agency for Social Analyses (ASA), Sofia, Bulgaria
Pammett, Jon	Carleton University, Ottawa, Canada
Papageorgiou, Bambos	Center of Applied Research (CAR), Cyprus College, Nicosia, Cyprus
Vecernik, Jiri	Institute of Sociology, Academy of Sciences of the Czech Republic, Prague, Czech Republic
Andersen, Jorgen Goul	Aalborg University, Department of Economics, Politics and Public Administration, Aalborg, Denmark
Tonboe, Jens Christian	Department of Social Studies and Organisation, Aalborg University, Denmark
Borre, Ole	University of Aarhus, Denmark
Nielsen, Hans Jorgen	Department of Political Science, University of Copenhagen, Denmark
Andersen, Bjarne Hjorth	Department of Sociology, University of Copenhagen, Denmark
Kjaer, Ulrik	Department of Political Science, University of Southern Denmark, Odense, Denmark
Tobiasen, Mette	The Danish National Institute of Social Research, Copenhagen, Denmark
Dore, Carlos	Instituto Nacional de Opinion Public (INOP), Republica Dominicana
Blom, Raimo	University of Tampere, Finland
Melin, Harri	University of Turku, Finland
Tanskanen, Eero	Statistics Finland, Helsinki, Finland
Carton, Ann	Ministerie van de Vlaamse Gemeenschap (MVG), Administratie Planning en Statistiek, Flanders (Belgium)
Billiet, Jaak	Catholic University Leuven, Leuven, Belgium
Waeye, Hans	University of Gent, Gent, Belgium
Molenberghs, Geert	University of Hasselt, Hasselt, Belgium
Elchardus, Mark	University of Brussels, Belgium
Breda, Jef	University of Antwerpen, Belgium

Smith, Tom W.	NORC, USA
Marsden, Peter V.	NORC, USA

2.1.4 Bibliographic citation

Publications based on ISSP data, which are made available through GESIS, should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations should appear in footnotes or in the reference section of publications.

How to cite the data: ISSP Research Group (2013): International Social Survey Programme: Work Orientations III – ISSP 2005. GESIS Data Archive, Cologne. ZA4350 Data file Version 2.0.0, doi: 10.4232/1.11648

2.2 Content

2.2.1 Abstract

Attitude to work. Work orientation and description of work contents.

2.2.2 Topic classification

Topics: Preferred time budget for selected activities such as work, leisure time etc.; work orientation; importance of selected demands of a job (scale); preference for being self-employed or being an employee and working in a small or in a large firm and working in private business or civil service; advantages of the employee status (greater job security and lower impairment of the family life); importance of unions for job security and working conditions of employee; preference for full-time employment or part-time employment; preference for more work (and money) or for reduction in working hours; characterization of the respondent's work and work satisfaction (scale); physical exhaustion after work; frequency of dangerous and unhealthy job situations; possibility of flexible organisation of respondent's working time; personal opportunity to influence the organization of the workday or work process; difficulties in handling personal matters during working hours; frequency of the impairment of the family life by the work requirements and vice versa; usefulness of the abilities learned from past work experience for the present job; helpfulness of the present work experiences for looking for a new job; job training in past year to improve job skills; judgement on the relationship between management and employees (working atmosphere); description of personal commitment to work; identification with firm or organization (scale); expected difficulties in finding a job as good as the current one; self-assessment of one's own substitutability; likeliness of job search in the coming 12 months; worrying about one's own job security; accepted concessions to avoid own unemployment (accepting a job with new demands, accepting of a lower paid position, temporary employment and longer travel to get to work); existence of a side job; self-assessment of psychological characteristics of personality.

Those who are not currently employed were asked: work for more than one year and time last paid job ended; main reason for the end of employment; interest in finding a paid job; expected difficulties in finding a new job; currently looking for a job; activities in the search for work; training activities to improve job skills in past year; main income source.

Demography: sex; age; marital status; living together with a partner; education and duration of education; current employment status; occupation (ISCO88); employment in private or public sector; self-employment or employee; personal employees; time worked each week; superior function and span of control; company size; income; religious denomination; religiousness; union member; self-assessment of social class; self-assessment on a left-right continuum; party preference; size of household and composition; city size; region; original country of origin or ethnic group affiliation.

2.3 Geographic Coverage

Australia (AU), Belgium/Flanders (BE-FLA), Bulgaria (BG), Canada (CA), Switzerland (CH), Cyprus (CY), Czech Republic (CZ), Germany (DE), Denmark (DK), Dominican Republic (DO), Spain (ES), Finland (FI), France (FR), Great Britain (GB-GBN), Hungary (HU), Ireland (IE), Israel (IL), Japan (JP), South Korea (KR), Latvia (LV), Mexico (MX), Netherlands (NL), Norway (NO), New Zealand (NZ), Philippines (PH), Portugal (PT), Russian Federation (RU), Sweden (SE), Slovenia (SI), Taiwan (TW), United States (US), South Africa (ZA)

2.4 Universe

18 years old (exclusions: Finland: 15; Japan and South Africa: 16) and older

2.5 Sampling procedure

Multi-stage stratified random sample

2.6 Fieldwork and sample sizes

Table: Participating countries (regions) and fieldwork information for ISSP 2005

Country (Region)	ISO	Fieldwork start/ end	Fieldwork Institute	Questionnaire-versions	Sample Size (n of cases)
Australia	AU	31 Aug 05 – 29 Dec 05	Australian Social Science Data Archive	AU05	1988

2.7 Mode of data collection

Mail, written or oral survey with standardized questionnaire

3 Corresponding survey material

When dealing with international comparative data, data sets and documentation must be seen as two sides of the same coin. Even though ISSP members make huge efforts to produce comparable data in each country, there still remains a remarkable amount of country specific peculiarities in the contributions to the final, international data set. These country specific peculiarities either have to be harmonised or to be documented, as they provide vital information for secondary analysts. Therefore, a set of procedures has been developed to take care for orderly technical preparation of national data sets and to allow for the systematic collection of required context information.

All corresponding survey materials are provided in English, only the national questionnaires are available in the national language(s) of each country.

3.1 Basic Questionnaire

The ISSP General Assembly concludes the design phase of an ISSP module after intensive discussions on the single items of the Basic Questionnaire roughly a year before the module is fielded. Two third of the module questions have to be replications from previous ISSP modules of the same subject. According to this, one third of the questions in each module are new. Subsequent to the mandatory module questions, some pre-selected optional questions can be added. Finally, ISSP member countries translate the British English Basic Questionnaire to their local language as equivalent as possible.

Drafting group for the Basic Questionnaire on the Work Orientations Module 2005:

- Israel: Noah Lewin-Epstein (Convenor)
- Germany
- Hungary
- Japan
- South Africa
- Venezuela

3.2 Background Variables Standards and Documentation

Apart from the Basic Questionnaire, covering the substantial module variables, countries also have to collect responses on a defined set of ISSP Standard Background Variables, which predominantly contains demographic information. Since the ISSP often runs with larger national surveys, the background variables are mainly taken from these surveys. Thus, demographic issues cannot be asked in a fixed form over all members of the ISSP. They have to meet the demands of the national studies first. As a result, the demographic variables for the ISSP need to be post-harmonised according to a developed set of common standards.

Over the past 30 years, there have been different Background Variable Standards:

The first set of background variables was established in 1985 with the first ISSP survey. Here countries agreed on collecting the same demographic information. This list of variables underwent a revision in 2001, now providing a coding frame for each background variable. It was valid until 2009.

In 2010 a new revision process of the ISSP Background Variables, planned for a three years period, started. Beginning with the ISSP module 2010, this first revised version of the ISSP Background Variable Standard concentrating mainly on variables containing work, occupational and partnership status information came into effect. The second round of revisions, coming into effect in 2011, had its focus on the education variables, while the last change is going to be made on the variable measuring ethnicity, effective with the module 2013. The new standard is documented in some guidelines (different documents indicating the intermediate steps of revision), providing detailed information and instructions on the variables measurement goals, coding frames, filters and possible question texts. Additionally, the question texts are summarised in a Master Questionnaire on

Background Variables.

Since 2004 countries document the post-harmonisation processes for each variable in a special documentation template provided by the Archive. This template, always adjusted to the current standard, offers detailed country specific information on administration, derivation, and coding of the ISSP Background Variables.

All relevant background variable documents are available under the following link:

<http://www.gesis.org/en/issp/issp-members-area/coding-standards/>

3.3 National Study Description

For each country, the original National Study Description is available in the appendix of this Variable Report. The National Study Descriptions are provided by the countries and include information on sample sizes, field dates, modes of data collection, sampling procedures, response rates and weighting processes.

3.4 Characteristics of National Population

The appendix of this Variable Report also includes Characteristics of National Populations for all participating countries from 1989 on. These documents provide statistical data on the composition of national populations in terms of gender, age, education and employment rates and, therefore, allow assessing how representative national samples are.

3.5 Where to find the survey materials and the data set of the ISSP Module of 2005 – Work Orientations III

In the GESIS Data Catalogue on the GESIS web you find

- the **Basic Questionnaire** of this module together with
- all **country questionnaires** in the respective local languages,
- the **Codebook** (Variable Report) with the **National Study Descriptions** and the **Characteristics of National Populations** in its appendix
- detailed **National Documentations** on phrasing and coding of the **Background Variables**,
- the **Study Monitoring Report** and
- the **integrated data file ZA4350_v2.0.0** for download

under the tab "Data and Documents" of:

<https://dbk.gesis.org/dbksearch/SDESC2.asp?no=4350>

The GESIS online data portal ZACAT also provides the integrated data file and further ISSP documentation materials for download:

<http://zacat.gesis.org/webview/index.jsp?object=http://zacat.gesis.org/obj/fStudy/ZA4350>

Beyond this, ZACAT enables users to perform basic online analyses like frequency distributions, cross tabulations or regressions.

4 Data set structure and standards

ISSP data sets are processed and documented by the Data Archive of GESIS and by ASEP/ JDS every second year in accordance with agreed standards, which may differ in some details. Despite several changes in the background variables, a certain standard has been established in the course of time.

In order to uniquely identify a data set, to each data set version a GESIS Study No., a Version No., and a Digital Object Identifier (doi) is assigned. The doi is linked to the Study Description in the Data Catalogue (<https://dbk.gesis.org/dbksearch/index.asp>). Metadata filled in the Study Description of ISSP 2005 data and associated with a doi are provided to the registration agency for social science data (da|ra).

The doi: 10.4232/1.11648 is assigned to the ISSP 2005 (v.2.0.0).

4.1 Data set structure

Usually, the ISSP data sets are structured as follows:

1. Archive and Identification Variables

Administrative variables are used for identifying data sets, respondents and countries (GESIS Data Archive Study Number, Version Number, Respondent Number, Country Codes).

The GESIS Archive version variable includes the number of the data set and the respective release date, composed as a string variable with three numbers:

- The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases).
- The minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels).
- The third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

Country codes identify each case as belonging to one country. The country code variable, which was used according to a scheme leaning on international automobile identification codes in the beginning of the ISSP, was replaced by two country code variables based on the ISO Code 3166. One identifies countries as a whole, the other one possible subsamples, such as East and West Germany. The cross tabulations shown in this Variable Report are based on a third, alphanumerical country code variable, which also identifies subsamples.

2. Substantial Variables

The substantial variables contain the mandatory module questions, often supplemented by optional questions.

Variable labels provide keywords based on the question text; these keywords are applied consistently if questions or question items are repeated over time. All substantial variables include the original question number of the Basic Questionnaire in the variable labels.

Generally, all variable names consist of the standard prefix 'V' and the consecutive variable number (beginning with the archive variables).

3. ISSP Background Variables

In the earlier ISSP modules, all variables are numbered consecutively, beginning with the archive variables and followed by substantial and background variables. The last variable of each data set,

usually is the variable on weighting. Later on, the background variables start with V200 et seq.. Nowadays, these variable numbers are expressed by mnemonics **with max. 8 characters (SEX, AGE, ...)**.

4. Country Specific Variables

Variables, which cannot be harmonised for various reasons, are usually presented as country specific variables. As a rule, variable names of country specific variables have country abbreviations as prefixes. In some of the older ISSP studies, the principle of country specific variables is not used. Instead all country specific information is integrated into one variable. This Variable Report provides careful documentation of country specific meanings and deviations.

5. Protocol Variables

There are two protocol variables in the latest ISSP modules. The first, 'MODE', indicates the mode of data collection, while the second, 'SUBSCASE', indicates whether a respondent in the sample is an original case or a replacement for an originally selected respondent who was not available. Former ISSP surveys do not contain the SUBSCASE variable.

6. Weight

There is no weight available for the international comparison on the ISSP across countries. Please note that also country subsamples can be over- respectively underrepresented without any weighting factor correcting for the imbalance. This fact has to be taken into account if these countries in question are analysed as one unit.

4.1.1 Deviating data set structure in ZA4350

In this data set there are two variables for country identification basing on ISO 3166, the former variable V3, now 'COUNTRY', and the new alphanumerical country code variable 'C_ALPHAN'. 'COUNTRY' provides country codes **that due to the enclosure of these codes in the respondents' ID numbers help to uniquely identify respondents.** 'C_ALPHAN' is used for the cross tabulations shown in this Variable Report. Usually, both variables identify subsamples. Since the Jewish and the Arabic population of Israel are available in one collective sample, the variable 'IL_REG' can be used as a flag variable to distinguish between these groups.

4.2 Data Preparation

On the basis of the Basic Questionnaire covering the substantial variables and the standard core set of background variables the Archive provides a Standard Setup for each individual ISSP module, which defines the variable and value labels for the integrated data file. All country data sets should be processed and prepared to match the structure of the Standard Setup before the material is deposited to the GESIS Data Archive for integration and archiving.

After conducting the national surveys, all collaborators are supposed to deposit their data at the GESIS Data Archive, where all the deposited data sets are prepared, integrated and merged into one single international data set, which is finally published.

During the data preparation process all national data sets are successively controlled for completeness, missing and duplicate records, for wild codes and for formal consistency of response patterns and question routing. Moreover, national derivation processes from source to target codes in the background variables are controlled. Missing values, especially due to filter instructions are checked and recoded where necessary. Errors, which are discovered during these procedures, are corrected or documented in cooperation with primary investigators. Complete machine-readable DDI-XML (see chapter 4.5) compliant documentation is created for all ISSP data sets by GESIS.

4.3 Coding frames

By general rule, the variables of the module questions adopt the coding frame as specified in the Basic Questionnaire, except for multiple response questions.

GESIS adds 'Not applicable' (NAP) codes for questions that have filters. NAP indicates that only a subsample and not all of the respondents were asked. Also in the case of country specific variables, all the other countries are coded NAP.

GESIS adds 'Not available' (NAV) for variables which in single countries may not have been conducted for whatever reason.

4.3.1 Country specific answer categories

ISSP data include some questions (variables) which have country specific answer categories such as DEGREE, RESPONDENT'S INCOME, FAMILY INCOME, PARTY AFFILIATION, REGION and SIZE OF COMMUNITY. For country specific income variables with answer categories, the data is recoded to midpoints of the categories.

For occupation, official international occupation codes are used. While in the first years of the ISSP many countries used country specific occupation codes, ISCO 1988 has been established as a standard over the years.

4.3.2 Missing values

In general, the missing values are standardised across ISSP modules. For all variables a set of missing values is defined:

0: Not applicable (NAP), Not available (NAV)
 7 (97, 997, 9997, ...): Refused
 8 (98, 998, 9998, ...): Don't know
 9 (99, 999, 9999, ...): No answer

4.4 Weighting

Please note, that there is no total weight usable for international comparison. While all ISSP data sets contain a weighting variable, the weights in this variable do not incorporate a common weighting scheme that can be applied to all countries of the same ISSP module.

In the Study Description and/ or in the Background Variables Documentation of each country you will find more detailed information on the kind of weights that are used. You can see, whether

- a design weight
- weights to adjust for non-response bias or
- a combination of these both weights above or
- different weighting procedures

are applied. However, some countries dispense with weighting factors. If no weight is provided, the variable "Weight" is coded to 1.0. Otherwise the weighting factor is unequal 1.0 (but greater than 0).

It may be advisable to weight data to increase representativeness in certain cases. For ISSP data we strongly recommend consulting the National Study Descriptions for information on the certain weighting factor composition and maybe even the Characteristics of National Population for more context information. An initial overview of the national weighting procedures is provided in this Variable Report in chapter 6.

4.5 International documentation standard

The variable documentation is set up in accordance with the international metadata specifications for the social sciences, established by the Data Documentation Initiative <DDI>. The Variable Reports are based on the XML representation of DDI version 2. The documentation combines the exact wording and sequence of question components (question text, interviewer instruction, response categories, etc.) from the Basic Questionnaire with the variable description (variable name, values, and labels) of the data set. General remarks and comments referring to a certain variable are defined as variable notes. Notes mostly include additional information on country specific deviations from the ISSP standard, information about data problems or other specific characteristics.

5 Explanation of the variable documentation

The variable documentation part of this Variable Report describes each variable in the data file including all relevant information for this variable such as the single question components or further notes and frequency distributions. The variable documentation is set up by means of the GESIS Dataset Documentation Manager (DSDM) and in accordance with international metadata standards (DDI-Codebook/XML).

In general, the following abbreviations are used to indicate countries or (sub-national) areas. As far as applicable, the ISO 3166-1 alpha-2 country codes have been applied and coded accordingly in the alphanumeric sample identification variable 'C_ALPHAN'.

AU	Australia	IL	Israel
BE-FLA	Belgium/Flanders	JP	Japan
BG	Bulgaria	KR	South Korea
CA	Canada	LV	Latvia
CH	Switzerland	MX	Mexico
CY	Cyprus	NL	Netherlands
CZ	Czech Republic	NO	Norway
DE-E	Germany-East	NZ	New Zealand
DE-W	Germany-West	PH	Philippines
DK	Denmark	PT	Portugal
DO	Dominican Republic	RU	Russia
ES	Spain	SE	Sweden
FI	Finland	SI	Slovenia
FR	France	TW	Taiwan
GB-GBN	Great Britain	US	United States
HU	Hungary	ZA	South Africa
IE	Ireland		

The example explained below shows the information that for a typical substantial variable appears in the variable documentation part of a Variable Report. Results are usually broken down by country or presented as frequency counts in the case of country specific variables. In the case of variables with long lists of coded "real" values (e.g. age) results are not shown.

The complete question and answer texts are taken from the final Basic Questionnaire as provided. All deviations are documented in this Variable Report.

As there is neither an international weighting factor nor a national weighting factor which would be comparable for all participating countries, all frequencies and tables are calculated from unweighted data.

Header with [DIGITAL OBJECT IDENTIFIER \(DOI\)](#) linked to the Study Description in the GESIS Data Catalogue.

[VARIABLE NAME](#) (serial number assigned by the archive) and [VARIABLE LABEL](#) as defined in the data set.

[QUESTION NUMBER](#) and full [QUESTION TEXT](#) from the Basic Questionnaire, including interviewer instructions, if applicable. The numbers or letters that may appear together with the original question number, reflect the item order (multiple item or multiple response questions) or indicate if a question was asked only in a single country (country abbreviation).

[CODE VALUES](#) occurring in the data for this variable and complete [ANSWER TEXT](#) from the Basic Questionnaire. Abbreviations commonly used in the code definitions are DK (don't know), NA (no answer), NAP (not applicable) and NAV (not available).

[DERIVATION](#) information refers to the construction principle of derived variables.
[NOTE](#) delineates additional explanatory text or archive remarks on data processing and other issues relevant for the understanding or application of the variable.

[CROSS-TABULATION](#): The absolute frequencies base on unweighted data. The relative frequencies (*row percent*) refer to the valid cases (*n valid sum*), i.e. the total number of cases (*n sum*) reduced by the number of cases defined as missing data (*M*).

[FREQUENCY COUNTS](#): For country specific variables relative frequencies are calculated in- and excluding missing data (*M*), i.e. *percent* on the basis of all cases (*sum*) and *valid percent* on basis of the *valid cases*.

V34 - Q17 Best describes beliefs about God

Q.17

Which best describes your beliefs about God?

1 I don't believe in God now and I never have

2 I don't believe in God now, but I used to

3 I believe in God now, but I didn't use to

4 I believe in God now and I always have

8 Can't choose

9 No answer

6 Variable Documentation

(see next page)

Variable, Label**Question Text (English Language)****V1 - ZA Study Number**

GESIS Data Archive Study number ZA4350 for the ISSP 2005 on 'Work Orientations III'.

Study number of the data set producer and archiving number

4350 GESIS Data Archive Study Number ZA4350

V1

Value	Label	Missing	Count	Percent	Valid Percent
4350	GESIS Data Archive Study Number ZA4350		44365	100,0	100,0
Sum			44365	100,0	100,0
Valid Cases			44365		

V2 - GESIS Archive Version**Version and release date of the Archive Data Set**

This variable identifies the GESIS archive version number of this data set and the corresponding release date, recorded as a string.

The version number is composed of a sequence of three numbers. The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases), the minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels), and the third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

V2

Value	Label	Missing	Count	Percent	Valid Percent
2.0.0 (2013-07-22)			44365	100,0	100,0
	Sum		44365	100,0	100,0
	Valid Cases		44365		

V3 - Respondent ID Number

Respondent Identification Number

This number uniquely identifies each respondent. It is composed of two sections containing eight numbers in total. The first two digits are identical with the country codes (01-43) of variable 'COUNTRY'. The digits following behind contain the original identification number.

V3 by COUNTRY

COUNTRY	Count	Minimum	Maximum	ValidN
1	1.988	1.000.001	1.016.918	1.988

C_ALPHAN - Sample Prefix ISO 3166 Code - alphanumeric

ISO 3166 Country/ Sample Prefix

This alphanumeric sample identification variable C_ALPHAN includes country codes that are based on ISO 3166.

All countries are coded in accordance with the ISO 3166-1-alpha-2 country code, if available. ISO 3166-2 is applied for Great Britain. No ISO standard codes are available for the "historical" East/ West subdivision of Germany (DE-E/ DE-W) and for the Flemish subsample of Belgium (BE-FLA), which primarily includes residents from Flanders and in addition Flemish residents from Brussels. Concerning Israel, the variable IL_REG can be used as a flag variable to distinguish between the Jewish and Arabic population.

This variable is used for the cross tabulations shown in the Variable Report.

AU = Australia

V8 - Q1e Spending time: in leisure activities

Q.1

Suppose you could change the way you spend your time, spending more time on some things and less time on others.

Which of the things on the following list would you like to spend more time on, which would you like to spend less time on and which would you like to spend the same amount of time on as now?

(Please tick one box on each line)

Q.1e Time in leisure activities

- 0 Doesn't apply
- 1 Much more time
- 2 A bit more time
- 3 Same time as now
- 4 A bit less time
- 5 Much less time
- 8 Can't choose
- 9 No answer, refused

V11 - Q3a Personally important: job security

Q.3

For each of the following, please tick one box to show how important you personally think it is in a job.

(Please tick one box on each line)

How important is...

Q.3a ... job security

- 1 Very important
- 2 Important
- 3 Neither important nor unimportant
- 4 Not important
- 5 Not important at all
- 8 Can't choose
- 9 No answer, refused

V25 - Q6b Work conditions much worse without trade unions

Q.6

To what extent do you agree or disagree with the following statements?

(Please tick one box on each line)

Q.6b Without trade unions the working conditions of employees would be much worse than they are

- 1 Strongly agree
- 2 Agree
- 3 Neither agree nor disagree
- 4 Disagree
- 5 Strongly disagree
- 8 Can't choose
- 9 No answer, refused

V28 - Q9 Preference: number of hrs working-earning money

Q.9

(IF YOU ARE CURRENTLY WORKING FOR PAY: PLEASE ANSWER QUESTIONS 9-27 ABOUT YOUR MAIN JOB)

Think of the number of hours you work, and the money you earn in your main job, including any regular overtime.

If you had only one of these three choices, which of the following would you prefer?

(Please tick one box only)

- 0 Not applicable (code 2 in V27)
- 1 Work longer hours and earn more money
- 2 Work the same number of hours and earn the same money
- 3 Work fewer hours and earn less money
- 8 Can't choose
- 9 No answer, refused

in IL JP PT:

- 0 Not applicable (code 2,9 in V27)

V36 - Q10h Apply: job gives chance to improve skills

Q.10

(IF YOU ARE CURRENTLY WORKING FOR PAY: PLEASE ANSWER QUESTIONS 9-27 ABOUT YOUR MAIN JOB)

For each of these statements about your (main) job, please tick one box to show how much you agree or disagree that it applies to your job.

(Please tick one box on each line)

Q.10h My job gives me a chance to improve my skills

0 Not applicable (code 2 in V27)

1 Strongly agree

2 Agree

3 Neither agree nor disagree

4 Disagree

5 Strongly disagree

8 Can't choose

9 No answer, refused

V41 - Q12 Best describes the working hours conditions

Q.12

(IF YOU ARE CURRENTLY WORKING FOR PAY: PLEASE ANSWER QUESTIONS 9-27 ABOUT YOUR MAIN JOB)

Which of the following statements best describes how your working hours are decided? (By working hours we mean here the times you start and finish work, and not the total hours you work per week or month)

(Please tick one box only)

- 0 Not applicable (code 2 in V27)
- 1 Starting and finishing times are decided by my employer and I cannot change them on my own
- 2 I can decide the time I start and finish work, within certain limits
- 3 I am entirely free to decide when I start and finish work
- 8 Can't choose
- 9 No answer, refused

V56 - Q23 Easy or difficult for the firm to replace you

Q.23

(IF YOU ARE CURRENTLY WORKING FOR PAY: PLEASE ANSWER QUESTIONS 9-27 ABOUT YOUR MAIN JOB)

How difficult or easy do you think it would be for your firm or organization to replace you if you left?

(Please tick one box only)

- 0 Not applicable (code 2 in V27)
- 1 Very easy
- 2 Fairly easy
- 3 Neither easy nor difficult
- 4 Fairly difficult
- 5 Very difficult
- 8 Can't choose
- 9 No answer, refused

V67 - Q31 Not workg:like to have a paid job now or in future

Q.31

(PLEASE ANSWER QUESTIONS 28 - 36 IF YOU ARE NOT CURRENTLY WORKING)

Would you like to have a paid job, either now or in the future?

(Please tick one box only)

0 Not applicable (code 1 in V27)

1 Yes

2 No

8 Can't choose

9 No answer, refused

in BE-FLA DE:

0 Not applicable (code 1 in V27 or code 2 in V64)

in DK JP:

0 Not applicable (Code 1,9 in V27)

Note:

For the Dominican Republic, accidentally the same filter procedure was used for V67 during the first stage of data preparation like in variables V65 and V66 (code 1 in V27 or code 2 in V64). This could not be corrected in hindsight.

V87 - Q37j Self-assessment: R has artistic interests

Q.37

To what extent do you agree or disagree with the following statements?

(Please tick one box on each line)

I see myself as someone who...

Q.37j ... has few artistic interests

- 1 Strongly agree
- 2 Agree
- 3 Neither agree nor disagree
- 4 Disagree
- 5 Strongly disagree
- 8 Can't choose
- 9 No answer, refused

EDUCYRS - R: Education I: years of schooling

Education I - years (of full time) schooling including university but not vocational training

0 0 years

1 1 year

49 49 years

95 Still at school

96 Still at college, university

97 No formal schooling

98 Don't know

99 No answer, refused

in Germany (DE):

0 Not available (other than German school leaving certificates)

in South Korea (KR):

0 No schooling or dropped out of elementary school at 1 grade

97 Other incl. old style non-formal education (e.g. Seodang)

DEGREE - R: Education II-highest education level

Education II - highest education level / degree

- 0 No formal qualification, none, still at school
- 1 Lowest formal qualification attainable
- 2 Qualifications which are above the lowest qualification, but below the usual entry requirement for universities (intermediary secondary completed)
- 3 (Usual) Entry requirement for universities (higher secondary completed; the German Abitur, the French Bac, English A-level, etc.)
- 4 Qualifications which are above the higher secondary level, but below a full university degree; other education
- 5 University degree completed
- 9 No answer

in Switzerland (CH):

- 7 Other education

8112 Mineral-ore + stone-processing-plant operators
8113 Well drillers + borers + related workers
8120 Metal-processing-plant operators
8121 Ore and metal furnace operators
8122 Metal melters, casters
8123 Metal-heat-treating-plant operator
8124 Metal drawers and extruders
8130 Glass, ceramics + related plant operators
8131 Glass, ceramics + related machine operator
8139 Glass, ceramics + related plant operators not elsewhere classified
8140 Wood-processing + papermaking-plant operators
8141 Wood-processing-plant operators
8142 Paper-pulp plant operators
8143 Papermaking-plant operators
8150 Chemical-processing-plant operators
8151 Crushing-, grinding machinery operator
8152 Chemical-heat-treating-plant operators
8153 Chemical-filtering-equipment operators
8154 Chemical-still + reactor operators
8155 Petroleum + natural-gas-refining-plant operators
8159 Chemical-processing-plant operators not elsewhere classified

8160 Power-production + related plant operators
8161 Power-production plant operators
8162 Steam-engine and boiler operators
8163 Incinerator, water-treatment + related operators
8170 Automated-assembly-line + industrial-robot operators
8171 Automated-assembly-line operators
8172 Industrial-robot operators
8200 Machine operators and assemblers
8210 Metal+mineral-products machine operators
8211 Machine-tool operators
8212 Cement + other mineral products machine operators
8220 Chemical-products machine operators
8221 Pharmaceutical products machine operator
8222 Ammunition products machine operator
8223 Metal finishing + coating-machine operators
8224 Photographic-products machine operator
8229 Chemical-products machine operators not elsewhere classified
8230 Rubber + plastic-products machine operators
8231 Rubber-products machine operators
8232 Plastic-products machine operators
8240 Wood-products machine operators
8250 Printing + paper-products machine operators
8251 Printing-machine operators
8252 Bookbinding-machine operators
8253 Paper-products machine operators
8260 Textile + leather-products machine operators
8261 Spinning + winding-machine operators
8262 Weaving + knitting-machine operators
8263 Sewing-machine operators
8264 Bleaching + cleaning-machine operators
8265 Fur + leather-preparing-machine operator
8266 Shoemaking + related machine operator
8269 Textile products machine operators not elsewhere classified
8270 Food + related products machine operators
8271 Meat + fish-processing-machine operator
8272 Dairy-products machine operators
8273 Grain + spice-milling-machine operator
8274 Baked-goods + chocolate-products machine-operators
8275 Fruit + nut-processing-machine operators
8276 Sugar production machine operators
8277 Tea, coffee + cocoa-processing-machine operators
8278 Beverage machine operators
8279 Tobacco production machine operators
8280 Assemblers
8281 Mechanical-machinery assemblers
8282 Electrical-equipment assemblers
8283 Electronic-equipment assemblers
8284 Metal + plastic-products assemblers
8285 Wood + related products assemblers
8286 Paperboard, textile + related production assembler

8287 Composite products assemblers
8290 Other machine operators + assemblers
8300 Drivers and mobile-plant operators
8310 Locomotive-engine drivers + related workers
8311 Locomotive-engine drivers
8312 Railway brakemen, signallers + shunters
8320 Motor-vehicle drivers
8321 Motor-cycle drivers
8322 Car, taxi and van drivers
8323 Bus and tram drivers
8324 Heavy truck and lorry drivers
8330 Agricultural + other mobile-plant operators
8331 Motorised farm + forestry plant operators
8332 Earth-moving + related plant operators
8333 Crane, hoist and related plant operators
8334 Lifting-truck operators
8339 Agricultural + other mobile-plant operators not elsewhere classified
8340 Ships deck crews and related workers
9000 Elementary occupation + unskilled workers
9100 Sales + services elementary occupation
9110 Street vendors and related workers
9111 Street food vendors
9112 Street vendors, non-food products
9113 Door-to-door, telephone salesperson
9120 Shoe cleaning + other street services
9130 Domestic + related helpers
9131 Domestic helpers and cleaners
9132 Helpers + cleaners in offices, hotels
9133 Hand-laundresses and pressers
9140 Building caretakers, window + related cleaner
9141 Building caretakers
9142 Vehicle, window + related cleaners
9150 Messengers, porters, doorkeepers + related
9151 Messengers, package, luggage porters
9152 Doorkeepers, watchpersons
9153 Vending-machine money collectors
9160 Garbage collectors + related labourers
9161 Garbage collectors
9162 Sweepers and related labourers
9200 Agricultural, fishery + related labourers
9210 Agricultural, fishery + related labourers
9211 Farm-hands and labourers
9212 Forestry labourers
9213 Fishery, hunting + trapping labourers
9300 Labourers in mining, construction, manufacturing
9310 Mining and construction labourers
9311 Mining and quarrying labourers
9312 Construction + maintenance labourers
9313 Building construction labourers
9320 Manufacturing labourers

9321 Assembling labourers
9322 Hand packers + other manufacturing labourers
9330 Transport labourers + freight handlers
9331 Hand or pedal vehicle drivers
9332 Drivers of animal-drawn vehicles + machines
9333 Freight handlers
9340 Other labourers
9996 Not classifiable; inadequately described; BG: Housewife, home duties
9997 Refused
9998 Don't know
9999 No answer

in Bulgaria (BG):

9996 Housewife, home duties

in Denmark (DK):

110 Armed forces, all personnel

4190 Other office clerks, also assisting spouse

in Hungary (HU):

1251 High-grade military officer

1252 Low-grade commissioned officer

2321 Secondary (high-) school teacher

2322 Teacher in vocational training

in Netherlands (NL):

1250 Military officers

2322 Second vocational teacher

3451 Police inspectors-detectives

7510 Non farm foremen

7520 Skilled manual

in Philippines (PH):

1320 Manager/ Managing family business/ Canteen owner

3445 Government employee/ Barangay Council Member/ Barangay Treasurer/ Barangay ex officer

5221 Sales/ Saleslady, salesgirl/ Factory customer assistant in cups factory

5222 Door to door business (parcel business)/ Sells casserole

5223 Merchandiser/ Buy and sell / Direct selling/ Rice dealer/ Rattan exporter/ Rolling store of housewares

7126 Construction/ Carpenter

SPWRKTYP - S-P:Workg f priv,pub sector,self-empl.

Spouse / partner: Private vs. public - Working for private versus public sector.

0 NAP (not married, no partner, not in labour force, never had a job); not available

1 Work for government

2 Public owned firm, national industry

3 Private firm, others

4 Self employed

8 Can't choose

9 No answer; don't know

CH_RINC - Respondent's Earnings: Switzerland

CH_RINC - Switzerland: May I ask you how much is the total of your personal monthly net income, i.e. the sum that it remains you after deduction of the contributions of the Social Security (AVS etc) but before deduction of the taxes?

Income information was combined from a divided source variable: the first part of the question asks for income in a direct form and the second (only asked if R is not willing to respond) asks if R would at least be willing to give an approximate indication of the income.

CH_INC - Family income: Switzerland

CH_INC - Switzerland: And, could you say how much is the total of the monthly net income of all household members, including you, i.e. the sum that remains after deduction of the contributions of Social Security (AVS etc) but before deduction of the taxes? i.e. the sum of all the incomes of occupation, annuity, pension, unemployment benefit, grant or other supports (but not incomes of capital).

The monthly household (incl. R) income in Swiss Francs (CHF) was combined from a divided source variable. The first part of the question asks in a direct form for the income and the second (only asked if R is not willing to respond to the first part) asks if R would at least be willing to give an approximate indication of the income. Monthly household income from all sources (pensions annuities, unemployment benefits, grants, other supports). Family income is not asked if the person lives alone in hh, therefore the value of INCOME is set to the value of RINCOME (R's income).

DE_INC - Family income: Germany

DE_INC - Germany: How high is the total net monthly income of your household? By this I mean the amount remaining after deductions for tax and social security contributions.

0 No income

226 226 EUR

8000 8.000 EUR

999990 Not applicable: all other countries

999997 Refused

999999 No answer

Note:

DE: If respondent refused to answer open ended question then income categories prompted; Alphabet letter and answer categories randomly assigned:

20. A 4.000 - 4.999 € (mean: 4500 €)

01. B less than 200 € (mean: 100 €)

14. C 1.750 – 1.999 € (mean: 1875 €)

21. D 5.000 – 7.499 € (mean: 6250 €)

05. E 500 – 624 € (mean: 562 €)

04. F 400 – 499 € (mean: 450 €)

15. G 2.000 – 2.249 € (mean: 2125 €)

06. H 625 – 749 € (mean: 687 €)

17. J 2.500 – 2.749 € (mean: 2625 €)

12. K 1.375 – 1.499 € (mean: 1437 €)

07. L 750-874 € (mean: 812 €)

10. M 1.125 – 1.249 € (mean: 1187 €)

08. N 875 – 999 € (mean: 937 €)

03. P 300 - 399 € (mean: 350 €)

19. Q 3.000 – 3.999 € (mean: 3500 €)

09. R 1.000 – 1.124 € (mean: 1062 €)

11. S 1.250 – 1.374 € (mean: 1312 €)

02. T 200 – 299 € (mean: 250 €)

18. V 2.750 – 2.999 € (mean: 2875 €)

22. W 7.500 € and above (mean: 7500 €)

16. Y 2.250 – 2.499€ (mean: 2375 €)

13. Z 1.500 – 1.749 € (mean: 1625 €)

If categorical question answered then mean coded.

Continuous and categorical variable coded into one.

If single household then respondent's income coded.

NL_INC - Family income: Netherlands

NL_INC - Netherlands: What is the average net income of you, your partner, and the other members of the household combined [if applicable]? (Mark one box for yourself, one for your partner and one for the other members of the household.)

NL_INC was constructed by calculating total amount. 'Net' means the amount that the household receives monthly after payment of income taxes, social security and pensions.

350 350 EUR

11000 11000 EUR

999990 Not applicable: all other countries

999999 No answer

Note:

The designated amount is created depending on respondent's living conditions taking either only respondent's income (represented as category midpoint) into account, two earnings (category midpoints of respondent and partner) or more earnings (category midpoints of members of household). The category midpoints of the underlying income classes correspond to those of the variable NL_RINC:

< 500 EUR (midpoint: 350)

500-1000 EUR (midpoint: 750)

1000-1400 EUR (midpoint: 1200)

1400-1800 EUR (midpoint: 1600)

1800-2200 EUR (midpoint: 2000)

2200-2600 EUR (midpoint: 2400)

2600-3000 EUR (midpoint: 2800)

3000-4000 EUR (midpoint: 3500)

4000-5000 EUR (midpoint: 4500)

over 5000 EUR (midpoint: 5500)

ISSP Study Description Form - Australia

Study title: ISSP 2005 Work Orientations III

Fieldwork dates: Start: 31 August 2005
Finish: 29 December 2005

Principal investigators: Shaun Wilson, Macquarie University
Rachel Gibson, The Australian National University

Sample type: The sample was stratified by Australian states and territories using population counts based on Australian Electoral Commission (AEC) statistics as at 29th July 2005. The selection of individuals within the stratified sample was random using the Electoral Roll for Australia produced by the AEC. This frame includes all registered voters who must be citizens of Australia (or a British subject on a Commonwealth electoral roll as at 25 January 1984). Since voting in Australia is compulsory, there is a very high proportion of the adult Australia population covered by this frame—approximately 92 percent in 2003.

A systematic random sample from each state and territory list was drawn by taking every nth name starting with a random start point of size proportional to the population of registered voters. The sampled units were named individuals.

Fieldwork institute: Australian Social Science Data Archive

Fieldwork methods: Self-completion, paper and pencil, mailed to, mailed back by respondent

Sample size: 1988

Response rates:

5000	A - Total issued (total sample)
462	B - Ineligible (address vacant, wrong ages,...)
4538	C - (= A - B) Total eligible (in scope sample)
1988	D - Total ISSP questionnaires received
2550	E - (= C - D; = F + G + H) Total non-response
297	F - Refusals (refusing to take part)
2237	G - Non-contact (never contacted)
16	H - Other non-response

Language: English

Weighted: No weighting

Weighting procedure: n/a

Known systematic properties of the sample:

Gross sample

Using a sampling frame derived from the AEC Electoral Roll (2005) excludes permanent and temporary residents of Australia (who are not citizens) and any other adults in Australia who are non-citizens except for British subjects on a Commonwealth electoral roll as at 25 January 1984. These exclusions amount to approximately 8 percent of the adult population.

Net sample

The AuSSA 2005 sample demographics were compared with statistics available from the Australian Bureau of Statistics (ABS) including the 2001 Census. The major biases are: age (median age is older than the Census population), education (over-representation of persons with post-secondary school qualifications), and gender (slight over-representation of women).

Deviations from ISSP questionnaire:
Publications:

None

Work Orientations III
Study Description

ISSP Study Description Form - Flanders (Belgium)

- Study title:* Sociaal - culturele verschuivingen in Vlaanderen 2005 (Social-cultural changes in Flanders 2005)
- Fieldwork dates:* March 7th- June 21th 2005
- Principal investigators:* Ministerie van de Vlaamse Gemeenschap (MVG), Administratie Planning en Statistiek (APS) (dr. Ann Carton)
Supported by a scientific committee: Prof. dr. Jaak Billiet (K.U.Leuven), Prof. dr. Geert Loosveldt (K.U.Leuven), Prof. dr. Hans Waeghe (U.Gent), Prof. dr. Marc Swyngedouw (K.U.Leuven/K.U.Brussel), Prof. dr. Mark Elchardus (V.U.Brussel), Prof. dr. Geert Molenberghs (U.Hasselt), Prof. dr. Jef Breda (U.Antwerpen)
- Sample type:* Target population: Persons 18-85 years old, Belgian nationality, resident within private households and homes for elderly, in Flanders and Brussels (selection on Dutch addresses).

Sampling design: Stratified two-stage random sampling procedure
Regional stratification, 5 provinces in Flanders and Brussels
1st stage: PSU are clusters of addresses localized in postcodes. The number of clusters for each postcode is proportional to the population size in each province.
2nd stage: using the National Register N=2351 addresses (2277 in Flanders and 74 in Brussels) were randomly selected within the groups born 1920-1987 in the randomly selected postcodes.
No substitution but in order to cope with non-response and to reach about 1500 face-to-face interviews: oversampling within certain postcodes depending on differential regional non-response rates.

The National Register is a national governmental institution that stores data on all residents in Belgium: name, address, gender, date of birth, nationality, and composition of the family.
- Fieldwork institute:* TNS Dimarso / Brussel
- Fieldwork methods:*
- Survey social-cultural changes in Flanders including the standard background variables: CAPI face-to-face interviews with trained interviewers (1 day training).
 - ISSP-module: drop-off questionnaire arrives with interviewer, self-completion by respondent and mailed back by respondent to MVG - APS. Follow-up of drop-off questionnaire by MVG - APS.
- Sample size:* N=1522 respondents in Survey social-cultural changes in Flanders of which 1338 respondents completed the drop-off questionnaire.

Response rates:

2351	A - Total issued (total sample)
205	B - Ineligible (address vacant, wrong ages,...)
2146	C - (= A - B) Total eligible (in scope sample)
1338	D - Total ISSP questionnaires received
808	E - (= C - D; = F + G + H) Total non-response
598	F - Refusals (refusing to take part)
164	G - Non-contact (never contacted)
46	H - Other non-response

A=available addresses (n=2351)

B=deceased (n=1) + moved-out (n=64) + language barrier (n=62) + disabled, demented (n=78)

F= refusal face to face interview (n=414) + face-to-face interview but no drop-off (n=184)

H= other non-response (n=10) + interviewer fraud (n=34)+ technical problems sending data (n=2)

Language: Dutch

Weighted: Yes

Weighting procedure: For the total of the drop-off questionnaires a weighting variable was computed, taking into account gender, age group and level of education (FOD Economie - Afdeling Statistiek, Enquête naar de arbeidskrachten. (Labor Force Survey, Flanders, 2004)

Known systematic properties of the sample:

Realized drop-off versus realized total sample:

- The realized drop-off sample (N=1338) is representative for the realized total sample (N=1522) for the variables age, gender, and level of education.

Realized drop-off versus population:

Following groups are (slightly) under represented:

- 18-24 years old lower educated (primary education or no diploma) men
- 18-24 years old men with non-university higher education
- lower educated 45-54 years old women
- lower educated 55-64 years old men
- lower educated 65-85 years old men and women

Following groups are (slightly) over represented:

- 45-54, 55-64 and 65-74 years old men with non-university higher education
- 55-65 years old men lower secondary education
- 25-34 and 55-64 years old women with non-university higher education

Deviations from ISSP questionnaire:

Following standard background variables were not included in the survey:

PARTY_LR Party affiliation - left-right

(Not asked but coded in a 5-point left - right scheme by data producers)

nat_PRTY Party affiliation - Country-specific

VOTE_LE Vote last general election: Yes/no

ISSP 2005
Work Orientations III
Study Description

ISSP Study Description Form - Bulgaria

Study title: 'Citizenship'2004' and 'Work orientation'2005'

Fieldwork dates: 15.07.2005 – 26.07.2005

Principal investigators: Lilia Dimova, Agency for Social Analyses (ASA), Sofia, Bulgaria

Sample type: Two stages random sample. The first stage of the sampling procedure was based on the list of electoral sections from the Local elections 2003. The total number of the electoral sections is 12313. Electoral sections cover the whole territory of the country and respectively provide access to the whole Bulgarian population aged 18 and over. The agency disposes of the complete list of electoral sections, which includes: its number, territorial location, and number of registered voters. Selection of electoral sections included in the sample was based on the procedure of systematic random selection. Within each selected 125 units were randomly selected 9 respondents who were 18 of age and over

Fieldwork institute: ASA and PDP

Context of ISSP questionnaire how it is in the hard copy questionnaire:

- Q1A – Q 75 = BSS
- A1 – A28 = ISSP 'Citizenships'04'
- B1 – B36 = ISSP 'Work Orientation'05'
- B37 – C21 = BSS
- C19(1) – C19(10)= Big Five Screening (BFS)
- D1 – D10, D12 – D22, D23 – D25, D27 - D31, D33 – D34, T3 –T4 = The ISSP Standard Background Variables

Sample size: 1121

Response rates:

1700	A - Total issued (total sample)
213	B - Ineligible (address vacant, wrong ages,...)
1487	C - (= A - B) Total eligible (in scope sample)
1121	D - Total ISSP questionnaires received
366	E - (= C - D; = F + G + H) Total non-response
196	F - Refusals (refusing to take part)
166	G - Non-contact (never contacted)
4	H - Other non-response

Language: Bulgarian

Weighted: Yes, the weighting factor exists in the data-set

Weighting procedure: One weighting variable was computed – (W). Weight variable [W] accounts for **gender and age-groups**. There are sixteen coefficients in W – **two gender groups** (male and female) **multiplied by eight age groups** (18-19 years, 20-29 years, 30-39 years, 40-49 years, 50-59 years, 60-69 years, 70-79 years and 80 years and over).

In the Table below are presented all statistical data, data in the sample and coefficient in the fail, calculated regarding the algorithm: **Coefficient=**

Statistical data / Sample data

	Statistical data (Absolute Number)	Statistical data (%)	Sample (%)	Coefficient
	1	2	3	4=2/3
Male 18 - 19 years	109758	1,7179	2,05909	0,83432
Male 20 - 29 years	586758	9,1839	5,28201	1,73872
Male 30 - 39 years	539646	8,4465	4,74485	1,78015

Study Description**

ISSP Study Description Form- Switzerland

- Study title:* ISSP 2005 Work Orientations III
- Fieldwork dates:* 16th of March 2005 until 7th of July 2005
- Principal investigators:* Institut SIDOS, Ruelle Vaucher 13, CH-2000 Neuchâtel
- Sample type:* The ISSP 2005 survey was combined with the „MOSAiCH“ survey in Switzerland. The sampling procedure was the following:
- Stratification of the households into 6 regions (Espace Mittelland, North of Switzerland, East of Switzerland, Center of Switzerland and Italian-speaking part of Switzerland)
 - Random selection of households from the extended phone register
 - Sending of an information letter + a flyer on the survey
 - At least 5 face to face contact attempts from the interviewer to fix a date for the interview. Households or persons that couldn't be reached after 5 attempts or households or persons that refused to participate were contacted again by the telephone central of the survey institute.
 - Random selection of one person in each household with the KISH method
 - CAPI Interview
- Fieldwork institute:* MIS Trend, Institut pour l'étude des marchés et les sondages d'opinion, Pont-Bessières 3, 1005 Lausanne
- Fieldwork methods:* CAPI
- Sample size:* 1078
- Response rates:*
- | | |
|------|---|
| 2300 | A - Total issued (total sample) |
| 173 | B - Ineligible (address vacant, wrong ages,...) |
| 2127 | C - (= A - B) Total eligible (in scope sample) |
| 1078 | D - Total ISSP questionnaires received |
| 1049 | E - (= C - D; = F + G + H) Total non-response |
| 855 | F - Refusals (refusing to take part) |
| 45 | G - Non-contact (never contacted) |
| 149 | H - Other non-response |
- Language:* German, French and English
- Weighted:* Yes
- Weighting procedure:* The weight is defined according to the following criteria:

- probability for the respondent to be selected in his/her household
- Age
- Gender

The estimation of age and gender is based on the Swiss annual Population Statistics (ESPOP) 2004

The age was recoded into the following six categories:

- 1) 18-24 years
- 2) 25-34 years
- 3) 35-44 years
- 4) 45-54 years
- 5) 55-64 years
- 6) 65 and older

The weight is also a combination of the three criteria.

Study Description**

ISSP Study Description Form – Czech Republic

Study title: ISSP - Pracovní orientace 2005 (ISSP - Work orientations 2005)

Fieldwork dates: 16/05/2005-06/06/2005

Principal investigators: Jiri Vecernik, Institute of Sociology AS CR

Sample type: Three stage stratified probability sampling:
 1) Stratified probability sampling of election districts
 2) Probability sampling of households in selected district
 3) Sampling of household members based on a Kish grid

Fieldwork institute: SC&C s.r.o., Prague

Fieldwork methods: Face-to-face interview

Sample size: 1226

Response rates:

2580	A - Total issued (total sample)
32	B - Ineligible (address vacant, wrong ages,...)
2548	C - (= A - B) Total eligible (in scope sample)
1226	D - Total ISSP questionnaires received
1322	E - (= C - D; = F + G + H) Total non-response
625	F - Refusals (refusing to take part)
638	G - Non-contact (never contacted)
59	H - Other non-response

Language: Czech

Weighted: yes

Weighting procedure: Total weight is constructed from:
 1) design weights based on proportion of household sizes,
 2) post-stratification weights based on region, sex, education, age, economical activity, and size of the community.
 The weights were derived from data of the Czech Statistical Office.
 Method: raking based on loglinear modelling.

Known systematic properties of the sample:

- Under-represented groups are those, who are often out of their flat (students living in schools and colleges, conscripts). Inaccessible are persons who are not at their addresses at the time of the research (e.g., they are at longer journey out of their residence, in hospital, etc.), and persons who do not have any private address at time of the research (prisoners, homeless, persons living abroad, etc).
- People who work or worked in public opinion or market research and advertising were excluded.
- Due to response differences the basic socio-demographic characteristics - sex and education - are significantly different from the known population characteristics.

Deviations from ISSP questionnaire: No differences in module questions.

There are new labels for CZ_INC a CZ_RINC. (please see czech05labels.doc).

Specification of income variables:

- CZ_RINC: Total average net income of respondent per month in CZK. It includes incomes from main job or business, incomes from additional gainful activities or property, rents, social incomes as are unemployment benefits, maternal benefits, allowances, etc. It does not include child allowances and state compensatory benefits for children. Income asked in categories, i.e. midpoints of categories are coded.
- CZ_INC: Total average net income of household per month in CZK. It includes incomes and rents of all members of household and all social benefits, allowances and complementary incomes. Income asked in categories, i.e. midpoints of categories are coded.

**Denmark
ISSP 2005
Work Orientations III
Study Description**

Denmark 2005

Work Orientations III

1. Sample type, fieldwork etc.:

Sampling-procedure: A representative sample (simple random sample) was drawn from the *Central Population Register* (CPR) – which is a national register of all Danish citizens – from which respondent's name and address were identified. Thus, the sampled unit was 'named individuals'. No stratification, clustering etc. was employed.

The fieldwork method was postal survey (self-completion). One reminder was sent out to respondents who had not returned the questionnaire. In total 80,1 percent of the interviews were completed by mail and 19,9 pct. was conducted by telephone (cf. MODE).

No substitutions were permitted at any stage of the selection process or during the fieldwork.

The questions in the module were asked in the prescribed order.

2. Sample size:

Issued: 2500

Achieved: 1598

3. Language:

Danish

4. Danish study title:

"Danskernes arbejdsliv"

5. Fieldwork dates:

The fieldwork was conducted from 08.05.2006 to 14.11.2006.

6. Known systematic properties:

None known.

7. Response rate:

The response rate is calculated to percent.

Full productive interviews / (Issued names – (respondents moved, no forwarding address + respondents deceased)):

$$1598 / (2500 - (2+6)) \times 100 = 64,125 \text{ pct.}$$

Description	(N)
Issued names	2500
Selected respondent moved, no forwarding address	2
Selected respondent too sick/incapacitated to participate	24
Selected respondent deceased	6
Selected respondent out of town/hospital	15
Selected respondent not meet/addressee unknown	135
Selected respondent moved abroad	3
Selected respondent claims that he/she has sent in the questionnaire	21
Personal refusal by selected respondent	393
Other type of unproductive reaction	303
Full productive interviews	1598

**Dominican Republic
ISSP 2005
Work Orientations III
Study Description**

ISSP Study Description Form - Dominican Republic

Study title: Work Orientation 2005

Fieldwork dates: November 25th to December 15, 2005.

Principal investigators: Carlos Dore, Ph.D : Director of **INSTITUTO NACIONAL DE OPINION PUBLIC (INOP) – REPUBLICA DOMINICANA**

Sample type: Probabilistic, multistage sampling procedure with the universe stratified by geographic regions in the following stages:

1. Census Supervision Areas selected as Primary Sample Units (PSU) with probability of proportion to size (PPS)
2. Selection of households defined as the secondary sample units (SSU) in a non systematic method with the objective that 24 homes were selected in the conglomerate
3. Selection of the adult within each household eligible to be interviewed using the method developed by Trodha-Carter.

fieldwork institute: Asisa Research Group (ARG)

Fieldwork methods: Face to Face Interviews - PDA assisted

Sample size: The final sample consisted of 1958 adults, 18 years old or more, residents across the national territory, with sufficient ability in Spanish in order to be able to answer the questionnaire.

Response rates:

2880	A - Total issued (total sample)
390	B - Ineligible (address vacant, wrong ages,...)
2370	C - (= A - B) Total eligible (in scope sample)
1958	D - Total ISSP questionnaires received
412	E - (= C - D; = F + G + H) Total non-response
251	F - Refusals (refusing to take part)
130	G - Non-contact (never contacted)
31	H - Other non-response

Language: Spanish

Weighted: No. The decision not to weight was based on the following:

Estimation	Individuals Households Occupied Census 2002	Homes Census 2002	PUS Selected	Household s Selected	Effective Interviews Achieved	Population 18 yrs. + in Survey	of Estimated Homes in Survey	Factors of Sample (Weights)
D.N. and Santo Domingo	706131	763982	38	912	608	1811564	824866	1,00547364
Remaining Urban	831432	932563	46	1104	750	2115968	1043303	0,99496558
Remaining Rural	643586	750385	36	864	600	1583302	773663	1,00074640
TOTAL	2181149	2446930	120	2880	1958	5510834	2641833	

The estimated results were similar to the results obtained in the field, thus, there is no need too use weighting when considering the household return.

There is also no significant deviation of the data of such variables as: Gender, Age or Socioeconomic Strata.

Weighting NA

procedure:

Known

systematic

properties

of the

sample:

Although not possible to assess through statistical methods, Illegal Haitian nationals that **do not speak Spanish** and fear Repatriation, distance themselves from any type of statistical survey. Thus the results area in fact representative **of residents across the national territory, with sufficient ability in Spanish in order to be able to answer the questionnaire, as it was stated earlier.**

*Deviations
from ISSP
questionnaire:*

1. Dividing the following questions in two question wordings depending whether the Interviewee was an independent worker or a formal worker (employee). Thus, the data base locally reported contained for each of these questions three (3) variables:

- The first variable with the original number is a **combination** of both formats of the question (Total sample: employees + independent workers) and is the variable that is reported in the DATA BASE that was sent to the ISSP.

Locally we provided an alternative wording for independent workers. The table specifies which questions were offered in an alternate translation form:

Alternate translations and variable names

Original questions in English	Questions for employees/	Redaction of question for independent workers.
9(Q21).b In general, how would you describe relations at your workplace... b. ... between workmates/ colleagues?	9(Q21).b.em Between workmates/colleagues/people who work with you in the same place?	9(Q21).b.in Between workmates / people that work in the same location?

21(Q23).b. I am proud to be working for my firm or organization	21(Q23).b. em I am proud to be working for my firm or organization	21(Q23).b. in I am proud to belong to the group of people that do the same type of work that I do.
21(Q23).c. I would turn down another job that offered quite a bit more pay in order to stay with this organization	21(Q23).c. em Even if they offer me quite a bit more pay, I would turn down another job in order to stay with this organization or firm.	21(Q23).c. in Even if they offer me much more pay, would turn down another job in order to belong to this group of people that do the same type of work that I do.
23(N). How difficult or easy do you think it would be for your firm or organization to replace you if you left?	23(N). em If you decided to leave or quit the firm or organization you work for now, how easy do you think it would be for them to find your replacement?	23(N). in If you decided to leave the group of people that do the work you do, how easy would it be for the group to replace the work or service you offer?
24(Q25). All in all, how likely is it that you will try to find a job with another firm or organization within the next 12 months?	24(Q25). em Thinking in the next 12 months (next year)I, how likely is it that you will try to change your place of work (look for a job with another firm or organization) ?	24(Q25). in Thinking in the next 12 months (next year), how likely is it that you will try to change the type of work you do?
25(Q26). To what extent, if at all, do you worry about the possibility of losing your job?	25(Q26). em To what extent do you worry about the possibility of losing your actual job?	25(Q26). in To what extent do you worry about the possibility that the service/work that you do will not be needed in the future or that you will not receive the same income as now?

2. Insertion of indirect indicators to construct classificatory variables such as work situation for the interviewee and the partner (Work for another or independent) and hours worked weekly which had to be measured daily. **These variables however, are reported in the data base as specified by the context variables of the ISSP.**

3. **Top-bottom self placement** was collected and reported as "Which social class would you say you belong to: High, Medium, Low and Marginal (NSE_SELF) which constitutes self placement into one of 4 categories rather than along a 10 point scales. A socioeconomic index can be constructed in the future, with additional variables that were recorded (personal and family income, level of education, type of home and access to goods and services, among others).

Study Description

ISSP Study Description Form - Spain

Study-Title:	Work Orientation II	
Fieldwork Dates:	From 17 to 23 October, 2005	
Principle Investigator:	Juan Díez Nicolás ASEP, S.A.	
Sample Type:	Representative Sample of Adults Aged 18 Years and over Living Private Households in Spain	
Fieldwork Methods:	Personal interview at R'S home	
Context of ISSP questionnaire:	Regular Monthly Omnibus	
Sample Size:		
Response Rates:	1.225	A - Total issued (total sample)
	0	B - Ineligible (address vacant, wrong ages, ...)
	1.225	C - (= A-B) Total eligible (in-scope sample)
	1.203	D - Total ISSP questionnaires received
	22	E - (= C-D; F+G+H) Total non-response
	15	F - Refusals (refusing to take part)
	5	G - Non-contact (never contacted)
	2	H - Other non-response
Language:	Spanish	
Weighted?	Yes	
Weighting Procedure:	Optional : According to sex and age groups	
Known Systematic Properties:	None	
Deviations from ISSP Questions:	None	
Literature:	None, Yet

Study Description**

Study Description: ISSP 2005

Work Orientations III, Finland

Study title:

Suomalaiset ja työ 2005 (in Finnish)

Finländarna och arbetet 2005 (in Swedish)

Fieldwork dates:

September 14th – November 30th, 2005

14 th of Sep, 2005	questionnaires mailed
20 th of Sep, 2005	first questionnaire received
21 st of Sep, 2005	thank you/reminder postcard sent to all respondents
7 th of Oct, 2005	dead line of answering the questionnaire
11 th of Oct, 2005	replacement questionnaires sent to non-respondents
9 th of Nov, 2005	dead line of answering the replacement questionnaire
30 th of Nov, 2005	last questionnaire received

Principal investigators:

Prof. Raimo Blom, University of Tampere

Prof. Harri Melin, University of Turku

Eero Tanskanen, Statistics Finland, Helsinki (fieldwork)

Sample type:

Target population: household population aged 15 to 74 whose native language is Finnish, Swedish or Lappish.

Sampling design: a systematic random sample of individuals.

Sampling frame: population register, sorting order: domicile code and birth date. Stratification: implicit geographic stratification. No clustering.

Fieldwork Institute:

Statistics Finland, Survey Unit, Helsinki

Researcher responsible: Markku Nieminen (markku.nieminen@stat.fi)

Fieldwork methods:

Postal (both directions), self-completion, paper and pencil

Sample size:

Issued: 2 500, received: 1345

Response rates:

A - Total issued	2500
B - Ineligible (dead, disabled, living abroad)	7
C - Total eligible	2493
D - Total ISSP questionnaires received	1345
E - Total non-response	1148
F - Refusals	7
G - Non-contact (address unknown)	1
H - Other non-response	1140

Final response rate: **54,0 %**

Language:

Questionnaires in Finnish and Swedish. Information on language from the population register. Finnish (94,8 % of total sample) and Swedish (5,2 % of total sample)

Weighted:

Weight variables are included in the data-set. Basic data unweighted.

Weighting procedure:

The design of the survey was systematic sampling. In order to improve the efficiency of estimation and to reduce bias due to non-response a calibration method was used for the creation of the weights.

The following marginal distributions of the population were used: 1) gender (male, female), 2) age classes (15–24, 25–34,..., 65–74), 3) NUTS3 regions with following modifications: the Greater Helsinki Area was dealt as a separate region, 4) type of community (urban - semi-urban - rural). There are two weights available for calculations: 1) a weight that expands the results to the population level (the sum of the weights is the size of the population) and 2) a weight that doesn't have the expansion property (the mean of the weights is 1 and the sum of the weights is the number of accepted responses, i.e. the size of the data). Both of the weights are based on the same calibration process, only the scale differs.

Known systematic properties of the sample:

Sampling frame is updated and covers total population with the appropriate language restriction. A cross-sectional sample does not contain attrition by definition.

After having used our standard sampling procedures for over 20 years we have not encountered any bias due to using systematic sampling. Design effect of the sampling procedure ≤ 1 by definition.

Study Description**

ISSP Study Description Form - France

(for modules up to and including ISSP 2005)

Study title: 2005 ISSP Survey on Work Orientation

Fieldwork dates: September 2005 to December 2005

Principal investigators: Forsé Michel (CNRS), Lemel Yannick (INSEE)

Sample type: Random Equal Probability

Fieldwork institute: France-ISSP

Fieldwork methods: Mail

Sample size: 10,000

Response rates:

10,000	A - Total issued (total sample)
290	B - Ineligible (address vacant, wrong ages,...)
9,710	C - (= A - B) Total eligible (in scope sample)
1,729	D - Total ISSP questionnaires received
7,981	E - (= C - D; = F + G + H) Total non-response
7,872	F - Refusals (refusing to take part)
103	G - Unusable before data capture (nearly blank, etc.)
6	H - Other non-response (unusable after data capture)

Language: French

Weighted: yes

Weighting procedure: Post-stratification weighting

Known systematic properties of the sample: None

Deviations from ISSP questionnaire: None

Publications:

**Great Britain
ISSP 2005
Work Orientations III
Study Description**

ISSP Study Description Form – Great Britain

Study title: British Social Attitudes 2005

Fieldwork dates: June 2005 to November 2005

Principal investigators: National Centre for Social Research

Sample type: Clustered random sample: addresses were selected with equal probability in a stratified clustered design. One person aged 18+ was interviewed per address.

Fieldwork institute: National Centre for Social Research

Fieldwork methods: The ISSP module is implemented as a self-completion questionnaire, completed by the respondent after the main face-to-face interview and collected by the interviewer.

Sample size:

Response rates:

2145	A - Total issued (total sample)
171	B - Ineligible (address vacant, wrong ages,...)
2074	C - (= A - B) Total eligible (in scope sample)
913	D - Total ISSP questionnaires received
1161	E - (= C - D; = F + G + H) Total non-response
692	F - Refusals (refusing to take part)
187	Face-to-face interview but no self-completion
78	G - Non-contact (never contacted)
391	H - Other non-response

Language: English

Weighted: Yes

Weighting procedure: Addresses were selected with equal probability (except in Scotland where allowance was made for MOI – see below) but only one person interviewed at each address. Therefore weights need to be applied to correct for different number of adults at each address. The weights are calculated by the following formula:

Weight = (number of households at the address * number of adults in selected household) / MOI

Where MOI is the Multiple Output Indicator (MOI>1 indicates more than one household at the address).

Non-response weighting was then applied to correct for the unequal probability of response in different sub-groups in the population.

The final stage of the weighting was to adjust the final non-response weight so that the weighted respondent sample matched the population in terms of age, sex and region.

Very large weights were capped and the weights were scaled to make the weighted sample size equal to the unweighted sample size.

Known systematic properties of the sample: Sample excludes Scotland north of the Great Glen.

Deviations from ISSP questionnaire: Optional variables V78 to V87, Ethnic and TopBot are not available. The following variables were collected only if the respondent was not

economically active/retired and the spouse partner was economically active/retired : SPISCO88, SpWrkTyp.

**Hungary
ISSP 2005
Work Orientations III
Study Description**

ISSP Study Description Form - Hungary

Study title: Work Module

Fieldwork dates: 04.11.2005. – 20.11.2005.

Principal investigators: TARKI Social Research Centre

Sample type: We use probability sample of 18+ years old Hungarian population that has been selected in multiple stages with proportional stratification. No clustering was applied, consequently sample has no design effect.

A total sample of settlements is divided into two parts:

(1) cities over 80,000 inhabitants

(2) other settlements

(1) Cities over 80,000.

All the 10 Hungarian cities (Budapest + 9 cities) are selected to the settlement sample. In these cities individuals are selected following the simple random sampling schema, which is proportional to town's population 18+ and counter-proportional to the assumed response rate and non-eligible cases. Different estimated response rates and ineligible addresses are applied in Budapest, and in the other cities.

(2) Other settlements

(Including suburb of Budapest)

This part of the sample is selected using a stratified two-stage sampling design:

- Stratification: proportional sample allocation to six regions.
- First stage within each stratum: the selection of the sample settlements (towns and villages) is selected with probabilities proportional to the number of inhabitants aged 18+. The selection of the PSUs (primary sampling unit) is without replacements, so each PSU can be selected only once.
- Second stage within a selected settlement: individuals are selected following the simple random sampling schema, which is proportional to settlements population 18+ and counter-proportional to the assumed response rate and non-eligible cases. Different estimated response rates and ineligible addresses are applied in suburb of Budapest, towns and villages.

The names and addresses of respondents are obtained from the Central Registry and Electoral Office, with the help of simple random sampling.

Fieldwork institute: TÁRKI RT Social Research Centre

Fieldwork methods: face to face interview

Sample size: in the final ISSP file:1012

Response rates:

2225	A – Total issued (total sample)
209	B – Ineligible (address vacant, wrong ages,...)
2016	C - (= A - B) Total eligible (in scope sample)
1012	D – Total ISSP questionnaires received
1004	E - (= C - D; = F + G + H) Total non-response
427	F – Refusals (refusing to take part)
202	G – Non-contact (never contacted)
375	H – Other non-response

Language: Hungarian

Weighted: yes or no, whether a weighting factor exists in the data-set:
YES

Weighting procedure: Exact description of the weighting procedure / algorithm
In order to correct the sampling error we computed a weighting variable taking into account the type of residence (Budapest, other city, village), sex (male, female), age (18- 29, 30- 39, 40- 49, 50- 59, 60- 69, 70- x) and highest educational level (inadequate education to university). The weight of each cases was computed as $WEIGHT = (n/n') * (N'/N)$, where N = respondent above the age of 18 in the sample of 2001 census, N' = 1012, n = frequency of the population category in the census subsample the case belongs to, n' = parallel frequency in the 2005 Work module.

Known systematic properties of the sample: Description of biases or other deviations of the sample
Cross-tabulation of sex, type of residence, age categories, and highest educational level in the sample of the Work Module in comparison to the Population Census Data in Hungary of 2001.

Table.1.a. Sex

	Sample (unweighted data)	Census
Male	42,6	46,7
Female	57,4	53,4
Total	100.0	100.0

Table 1.b.Type of residence

	Sample (unweighted data)	Census
Budapest	16,8	18,4
Other city	48,5	46,8
Village	34,7	34,8
Total	100.0	100.0

Table 1.c. Age categories

	Sample (unweighted data)	Census
18- 39	35,2	39,2
40- 59	33,2	35,1
60- x	31,6	25,7
Total	100.0	100.0

Table 1.d. Highest educational level

	Sample (unweighted data)	Census
Primary level	53,1	61,8
Secondary level	30,7	26,7
Tertiary level	16,2	11,5
Total	100.0	100.0

Deviations from ISSP questionnaire: The questionnaire contains one battery, 4 items (salary should depend on good work / n of dependents in the family / level of education / work experience; Q12 in the Hungarian questionnaire), which was part of previous Work module but was replicated by mistake.

**Japan
ISSP 2005
Work Orientations III
Study Description**

ISSP Study Description: Japan

Study title: ISSP Work Orientation

Fieldwork dates: November 19 to November 27, 2005

Principal investigators: Kei KONO, Kumiko NISHI and Hiroshi ARAMAKI
(NHK Broadcasting Culture Research Institute)

Sample type: Two-stage stratified random sample of Japanese 16 or older.
First, urban and rural areas are divided into a number of groups (strata) based on similarities in local features and industrial structures. From each of those groups, streets and village-sections are again grouped together to form sampling units. From among such sampling units, 150 survey spots are selected at random. Then, from *the Basic Resident Registers* for these spots, 12 sample individuals aged 16 or over are selected according to a fixed random number.

Fieldwork institute: Central Research Services, Inc.

Fieldwork methods: Face-to-face interview

Sample size: Issued 1,800, Achieved 921

Response rates:

1,800	A - Total issued (total sample)
133	B - Ineligible (address vacant, wrong ages,...) 46 respondents were not found 87 respondents moved somewhere else
1,667	C - (= A - B) Total eligible (in scope sample)
921	D - Total ISSP questionnaires received
746	E - (= C - D; = F + G + H) Total non-response
406	F - Refusals (refusing to take part)
188	G - Non-contact (never contacted) 40 respondents came home at midnight 148 respondents were not at home temporarily
152	H - Other non-response 15 respondents were ill in bed at home 7 respondents were dead 20 respondents had not lived at home for one year or more 50 respondents had not lived at home for 10~364 days 38 respondents had not lived at home for 9 days or less 22 other cases

Language: Japanese

Weighted: No

Deviations from ISSP questionnaire: The literal translation of 'agree-disagree' scale used in the Japanese questionnaire is: (1) I think so; (2) I rather think so; (3) Can't say one way or the other; (4) I rather don't think so; (5) I don't think so.

**South Korea
ISSP 2005
Work Orientations III
Study Description**

Study Description: South Korea

<i>Study Title</i>	Korean General Social Survey (KGSS)
<i>Fieldwork Dates</i>	June 25, 2005 ~ August 30, 2005
<i>Principal Investigators</i>	Hyunho Seok, Survey Research Center, Sungkyunkwan Univ. Sang-Wook Kim, Survey Research Center, Sungkyunkwan Univ.
<i>Sample Type</i>	Multi-Stage Area Probability Sampling
<i>Fieldwork Institute</i>	Survey Research Center, Sungkyunkwan Univ., Seoul, Korea
<i>Fieldwork Methods</i>	Face-to-Face Interviews
<i>Sample Size</i>	1,613

Response rates:

2,500	A Total issued (total sample)
0	B Ineligible (address vacant, wrong ages,...)
2,500	C (= A - B) Total eligible (in scope sample)
1,613	D Total ISSP questionnaires received
887	E - (= C - D; = F + G + H) Total non-response
726	F Refusals (refusing to take part)
79	G Non-contact (never contacted)
82	H Other non-response

Language Korean

Weighted No

Weighting Procedure --

Known systematic properties of the sample:

- V26: 'A full-time job' means working 40 hours or more per week, and a part-time job means working 10 to 39 hours per week. The response categories for V26 are as follows:

- ① A full time job (40 hours or more per week)
- ② A part-time job (10-39 hours per week)
- ③ A job with less than (10) hours a week
- ④ No paid job at all

- V66: We got various answers other than the response categories ① thru ④. We added code '⑤ other' for those people with other reasons that could hardly be matched with the given categories. These include: "to continue my education"; "religious reason"; "to do my own business"; "to serve military duty"; and the like.

- V68 to V75: We asked these questions only to those who wanted to have a paid job. We added "can't choose" to the response category in order to classify those who didn't want to have a paid job.

Remarks on the survey questionnaire

- EDUCYRS has been derived from the KR_DEGREE variable.

- RINCOME and INCOME were asked by the following questions:

RINCOME: Before taxes and other deductions, what is your total monthly average income from this job? This includes your base pay, bonuses, and other allowances. (IF THE RESPONDENT DOES NOT HAVE A REGULAR MONTHLY INCOME (EX. FARMER), THEN DIVIDE THE ESTIMATED ANNUAL INCOME BY 12.)

INCOME: Before taxes and other deductions, what is the total average monthly income of your household? This includes all sources of income (ex. work income, interest or dividends, property income, rent, pensions, welfare support, or the money personally provided by somebody) from all household members including yourself. (IF THE RESPONDENT DOES NOT HAVE A REGULAR MONTHLY INCOME (EX. FARMER), DIVIDE THE ESTIMATED ANNUAL INCOME BY 12.)

ISSP 2005
Work Orientations III
Study Description**

Study Description: **Mexico**

Study title: **Work Orientations III** (ISSP 2005 Module)

Fieldwork dates: July 24 - August 16, 2006

Principal investigators: Federico Curiel and Jorge Godinez, Instituto de Mercadotecnia y Opinión (IMO).

Sample type: For the realization of the survey a design of multistage stratified random sample was applied with two partitions of the universe of national population aged 18 and over and four selection stages for the urban cases and three for the rural cases.

First partition: The universe was divided in 8 strata of states.

Second partition: Inside each stratum the universe was divided by the size of the cities, according to population size: Metropolis, more than 500,000, big city, from 100,000 at 500,000; middle city, from 50,000 to 100,000, and small city, less than 50,000, for the rural case, are the towns with less than 2,500 inhabitants.

First selection stage: Assigned the cases for stratum, Agebs were selected for the urban cases and towns for the rural ones. A total of 10 interviews were applied on the average by Ageb and 10 cases for town. The Ageb means Basic Geo-statistic Area, they are perfectly defined geographical units and with inhabitants group with known demographic and economic variables, its delimitation is smaller to the municipality and it facilitates studies for clusters.

Second selection stage: Inside each selected Ageb two blocks were chosen for the urban case, for the rural case the housings were chosen.

Third selection stage: For the urban case they were selected 5 housings on the average by block, in the rural towns it was selected the responsive individual by Kish's grill.

Fourth stage: It only applies for the urban cases and refers to the selection of the responsive individuals by Kish's grill.

Fieldwork institute: Instituto de Mercadotecnia y Opinión (IMO)

Ganzeboom, Harry B.G. [principal investigator] & Saskia Opdam, “ISSP 2005 + 2006: Opvattingen over werk. Rol van de Overheid.” [machine-readable data file]. The Hague: DANS. To be archived.

Introduction

The modules 2005 (“Work Orientations”) and 2006 (“Role of Government”) of the International Social Survey Programme were conducted in 2006 in the Netherlands as a stand-alone postal survey at the Free University Amsterdam [VUA] (Faculty of Social Sciences, Department of Social Research Methodology) by Harry B.G. Ganzeboom [principal investigator] and Saskia Opdam [fieldwork manager]. As of 2005, VUA has taken over the national ISSP membership for the Netherlands, formerly held by the Social and Cultural Planning Office [SCP] in The Hague, with Jos Becker as principal investigator. Funding for the 2005-2006 data collection was supplied by the SCP and the VUA.

The data-collection followed very much the same methodology as for the ISSP2003&2004 (see below). Important changes in the procedure have been:

- While the data for the two modules were collected with exactly the same procedure, the questionnaires of the two modules were separated (split ballot). The two questionnaires share the same social background questions (start with Z), but cover different topics. The WOR variables start with C, the ROG variables with D.
- We attempted twice to improve the response by offering incentives.
- The fieldwork took a long time because we were unhappy with the initial response rate and put two extra reminders in place.

Otherwise, the data collection process can be summarized as follows:

- Translation of the ISSP questionnaire documents was conducted by ourselves. The translation for the items in the Work Orientations module was copied from the earlier version. This was not possible for the Role of Government that has not been held before in the Netherlands. However, we consulted with the Social and Cultural Planning Office (Maurice Gesthuizen, Paul Dekker) about specific issues in translation.
- The standard ISSP questions were complemented with a large number of demographic variables, many of them on education and the occupational career. In both surveys a number of questions on the education/occupation link were added on behalf of Maarten Wolbers (VUA). In the WOR questionnaires a set of items attitudes on illegal immigrants was added formulated by Kees van de Veer (VUA).
- A simple random sample was drawn from the complete list of addresses in the Netherlands, maintained by Cendris, a subsidiary of the national postal service. For about 79% of the addresses there is an associated family name and about 61% have a phone number (matched with the national phone register). The sampling frame is known to be very accurate and complete.
- All respondents were approached using (A) advance letter, (B) first questionnaire, (C) first postcard reminder, (D) second reminder by letter, (E) second questionnaire. Then, non-respondents with a known phone number received a phone-call (G). Non-respondents without a known phone number or who were not reached by the phone reminder, received (H) a third questionnaire and (I) a reminder by postcard.
- All the questionnaires received were screened on completeness and double responses. All the alphanumerical information was transferred to a coding file.

- The remaining (numerical) information was keypunched (single punching) by a professional agency (InDat).
- The alphanumerical information for country of origin and occupations was coded using standard international classifications.
- The keypunched data were checked and labeled and merged with the coded alphanumerical information.
- A post-stratification weight was developed using (A) national benchmarks, (B) information from the sampling frame, (C) information from the household roster.

Resposns

Table 1 details the various steps taken to (re)approach the respondents and its results in terms of received questionnaires.

Throughout the fieldwork, respondents could call (in fact: call an answering machine) to ask further information, refuse participation or make comments. Once respondents had expressed non-willingness to participate, either by phone or (e-)mail, they were not contacted again. General information on the ISSP project and the data-collection was also provided on a website, that was referred to on the questionnaire and all the information sent to the respondent.

After the first campaign (in June 2006) we were unhappy with the response and decided to re-contact after the summer all non-respondents that had not been contacted in the phone reminder before the Summer. We also implemented a new incentive system for this last round.

Table 1: Mailings and response pattern						
Week	Event Date	Action	Sent out	Response End week	Refused	Out of frame
9	03/02	Sample received	5000			
11	03/16	Advance letter	5000		2.2%	34.9%
12	03/20	First Questionnaire		16.2%	14.4%	66.3%
13	03/24	Postcard reminder		52.1%	22.5%	71.1%
14	04/05	Reminder letter		62.5%	29.9%	74.7%
15				70.2%	32.1%	75.9%
16	04/20	Second questionnaire		72.7%	36.1%	79.5%
17		Phone reminder		83.4%	75.1%	
18		Phone reminder		88.0%	81.9%	
19		Phone reminder		91.3%	84.3%	
31				94.4%	92.3%	81.9%
44	11/02	Third questionnaire				
45				95.0%	92.8%	
46				96.8%	96.5%	91.6%
47				98.9%	98.6%	96.4%
48				100.0%	100.0%	1000%
49						
				1918	717	188

Sample

The sample was drawn from the national addresses list of Cendris, a subsidiary of TPG, the Dutch national postal agency. The specifications called for a systematic random sample of N=5000. For over 85%, the addresses are associated with a family name – the remaining 15% were addressed as “To main occupant [hoofdbewoner]”. The addresses are matched with the national phone register, which resulted in 70% of addresses being associated with a phone number.

Sampling within households was conducted by random date selection. The addresses were stratified in 12 random date groups and the addressed was invited to have the questionnaire completed by the household member whose birthday was closest to the date specified.

Table 2: Response and non-response						
	Together 2005&2006		Work Orientations 2005		Role of Government 2006	
	N	%	N	%	N	%
Initial sample	5000		2500		2500	
Undeliverable	188		108		80	
Net sample	4812	100.0%	2392	100.0%	2420	100.0%
Valid response	1918	39.9%	925	38.7%	993	41.0%
Explicit refusal	596	12.3%	317	13.3%	279	11.5%
No response	2287	46.5%	1144	47.8%	1143	49.3%

RESPONSE ENHANCEMENTS EXPERIMENTS WITH INCENTIVES

We have experimented twice with response enhancing incentives. In the initial sample, a randomized group experiment was held using a conditional incentive of euro 2. The treatment consisted of a promise that the research project would pay 2 euro to a named charity. The respondents in the experimental group could choose one of 20 charities. A reference to this was made in the introductory letter. In the control group, no such reference was made and respondents could not make a donation.

We found no effect of the treatment on the observed response. We paid a total of 1600 euro's to the charities.

The second experiment was held after the restart of the fieldwork, among the group of non-respondents without phone numbers (N=1523). The unconditional incentive was a set of six stamps (total value euro 1.95), send along with the third questionnaire. A reference to the stamps was made in the introductory letter. Again a randomized group experiment was held, with the control group receiving no stamps.

Again, there is no significant effect of the incentive, but this result may be due to the low statistical power: this was a smaller group and the response was very low to begin with. Nominally, the response in the incentive group was 1.3 times higher than in the control groups.

The total cost of this incentive was about euro 1700.

POST-STRATIFICATION WEIGHTS

There are four pieces of information that can inform us about selectivity that occurs because of non-response, and can be used to post-stratify the data.

Sample-frame information

- Location of the sampled address. It is to be expected that response in urban areas, and in particular in the four major cities (Amsterdam, Rotterdam, The Hague, Utrecht) is lower than elsewhere.
- Name: for about 11% of the sample there was no access to a name of the inhabitants. This has decreased the response.
- Phone: for about 32% of the sample there was no access to a phone number. Apart from obstructing the opportunity to use the third (phone) reminders, it is to be expected that not being listed in the phone-register is a strong correlate of willingness to participate.
- Foreign family name: Family names in the Netherlands can with considerable accuracy be classified as foreign and non-foreign. In particular Moroccan and Turkish names are easy to recognize, this is much harder for Surinamese and Antillean names.

In 11 cases, the respondents had removed their identification number from the mailed back questionnaire, although they supplied useable information. These questionnaires cannot be connected to the sample frame information and thus cannot be post-stratified in this respect (and these respondents kept receiving reminders to the very end...)

Ecological information (neighbourhood characteristics)

- Neighbourhood characteristics (connected to the detailed postal code in the sample frame) can be expected to predict response patterns
- This information has not been used for post-stratification. Its usefulness is left for future investigation.

Household box information

Selectivity may also occur within responding households. Each respondent was asked to complete a household box, which gives access to information of all household members with respect to:

- Sex
- Age
- Position in household
- Main activity
- Highest completed / current education.

In addition, we have information on:

- Total number of persons in household eligible for the sample (i.e. all household members of 16 and older).

Using this information, a synthetic population can be formed that consists of all household members in the designated age bracket (16-75+). The actual sample should be representative of this synthetic population. All this information was used to develop the post-stratification weight.

(Further information in Appendix B, pages 157-158)

ISSP 2005
Work Orientations III
Study Description**

ISSP Study Description Form – Norway 2005

Study title: Work Conditions and Work Experiences, Norway 2005

Fieldwork dates: 12.10 2005 - 09.12 2005

Principal investigators: Knut Kalgraff Skjåk, NSD.
Haakon Leiulfstrud, Norwegian University of Science and Technology, Trondheim.
Anne Ryen, Agder University College.
Knud Knudsen, University of Stavanger.

Sample type: The sample was a systematic random sample of individuals from the Central Register of Persons, aged 18-79 years.
1. Selection of persons with person number ending with 00-09
2. Systematic random sample of persons selected in stage 1.

Fieldwork institute: TNS Gallup

Fieldwork methods: The survey was conducted as a mail survey. The fieldwork included one reminder and two follow-ups with questionnaires.

Sample size: 1322

Response rates:

2700	A - Total issued (total sample)
38	B - Ineligible (address vacant, wrong ages,...)
2662	C - (= A - B) Total eligible (in scope sample)
1322	D - Total ISSP questionnaires received
1340	E - (= C - D; = F + G + H) Total non-response
170	F - Refusals (refusing to take part)
1103	G - Non-contact (never contacted)
67	H - Other non-response

Language: Norwegian

Weighted: No

Weighting procedure:

Known systematic properties of the sample: Net sample:
1. People with higher education and with occupations in ISCO major groups 1 and 2 over-represented
2. People currently in work over-represented

Deviations from ISSP questionnaire: Q8. Are you- or have you ever been in paid work?
1. Yes, I am in paid work at present
2. Yes, but temporarily away, due to illness, on leave, or similar
3. Yes, I was in paid work before
4. No

SAMPLING INFORMATION

Sampling Procedure

The sample was randomly selected from the 2005 New Zealand electoral roll, which contains the names of all registered voters over the age of 18 years. The achieved sample is generally representative of the New Zealand population over 18 years of age, but people under 30 are underrepresented in the sample, while those over 30 are overrepresented, and the proportion of women is higher than in the population whereas the proportion of men is lower. The data have **not** been weighted to correct these biases. However, comparisons of unweighted survey results with results *obtained from the sample weighted so that its age-sex distribution matched that of the* New Zealand population over 18, showed only minor differences between estimates.

Survey Administration Procedure

The questionnaire together with a covering letter was sent to the 2400 selected participants on 9 August 2005. A reminder letter was mailed to participants whose questionnaires had not been returned by 25 August. A second reminder and another questionnaire were sent to those who had not returned their questionnaires by 8 September. The survey was closed off on 30 September, nine weeks after the initial mailing.

Response Rate

The response rate achieved was $1309/(2400-221) = 60.1\%$

	Response from First mailing	Response from Second mailing	Response from Third mailing
Issued	2,400	1,555	1,153
Gone-no-address	93	32	51
Ineligible	17	16	12
Total eligible	2290	1,414	1,068
Refusals	61	21	35
Valid responses	674	333	302
Other non-response	1,555	1,153	753

Study Description**

ISSP 2005 Module on Work Orientations III in the Philippines (SWS February 25 – March 10, 2005 National Survey)

STATISTICAL METHODOLOGY

Study Title: ISSP 2005 Module on Work Orientations III

Fieldwork Dates: February 25 – March 10, 2005

1. Location

The ISSP 2005 Module on Work Orientations III survey covers the entire Philippines and had four major study areas: National Capital Region (NCR), Balance Luzon (outside NCR), Visayas and Mindanao.

2. Timetable

Fieldwork:

National Capital Region	-	February 25 – March 8, 2005
Balance Luzon	-	February 28 – March 10, 2005
Visayas	-	March 1 – 8, 2005
Mindanao	-	February 28 – March 9, 2005

3. Respondents

Data was gathered through face-to-face interviews of voting-age adults (18 years old and above). It asked a host of questions about political, social and economic issues, some undertaken as regular indicators monitored over time and others reflective of current concerns as well as specific personal information. It also obtained information and background characteristics about the household, the household head and family members.

4. Sampling Method

Sample Sizes and Error Margins. An indicator of data quality used is the standard error of the estimate, on which the margin for sampling error is based. As survey statistics are mostly proportions, the key measure of data precision is the standard error of a proportion taken from a sample. It is computed as follows:

$$\pm Z * \sqrt{\frac{p(1-p)}{n}}$$

Where Z , at 95% confidence level is 1.96; p is the sample proportion estimate and n is the sample size. The overall sample size of 1,200 voting-age adults gives a maximum error

margin of $\pm 2.83\%$ at the 95% confidence level, assuming a simple random sampling design. (The sampling error is at its highest when the true proportion being estimated is close to 50%.)

The following approximate 95%-confidence margins for sampling error should be made when aggregating data at various levels:

	Sample Size	Error margin
Philippines	1200	$\pm 3\%$
National Capital Region	300	$\pm 6\%$
Balance Luzon	300	$\pm 6\%$
Visayas	300	$\pm 6\%$
Mindanao	300	$\pm 6\%$

However, somewhat higher error margins should be expected since multi-stage cluster sampling was used; this design-effect is not readily measurable through established statistical software.

Sampling scheme. The Philippines was divided into four study areas: National Capital Region (NCR), Balance Luzon, Visayas, and Mindanao. The sample size for each of the four study areas is 300 voting-age adults.

Multi-stage probability sampling was used in the selection of sample spots. The allocation of sample units in each stage was as follows:

	Sample Prov.	Sample Mun.	Spots	Probability Respondents
National Capital Region	--	17	60	300
Balance Luzon	10	30	60	300
Visayas	5	30	60	300
Mindanao	6	30	60	300
	---	-----	-----	-----
	21	107	240	1200

For the National Capital Region

Stage 1. Selection of Sample Spots (Barangays)

For NCR's first stage, 60 barangays are distributed among the 17 NCR cities and municipalities in such a way that each city/municipality was assigned a number of barangays that was roughly proportional to its population size. An additional provision was that each municipality must receive at least one barangay. Barangays were then selected at random from within each municipality.

Stage 2. Selection of Sample Households

In each sample barangay, five households were established by systematic sampling. Designated starting points were randomly assigned - it was either: 1) a municipal/barangay hall, 2) a school, 3) the barangay captain's house, or 4) a church/chapel/mosque. A random start from 1-6 was also randomly generated for each spot. Thus, if a particular spot has a random start of 4, the first sample household should be the 4th household from the designated starting point. Subsequent sample households were chosen using a fixed interval of 6 households in between the sampled ones; i.e. every 7th household was sampled.

Stage 3. Selection of Sample Adult

For the third stage, in each selected household, a respondent is randomly chosen among the household members who were 18 years of age and older, using a probability selection table. In selecting the probability respondent of a household, only male family members were pre-listed in the probability selection table of odd-numbered questionnaires; only female family members were pre-listed for even-numbered questionnaires. In cases where there was no qualified probability respondent of a given gender, the interval sampling of households would continue until five sample respondents were identified.

For the rest of the Philippines

Stage 1. Allocation and Selection of Sample Provinces

Balance Luzon was further divided into 5 regions: Region I, CAR + Region II, Region III, Region IV and Region V; Visayas into 3 regions: Region VI, Region VII and Region VIII; and Mindanao into 6 regions: Region IX, Region X, CARAGA, Region XI, Region XII and ARMM.

Using probability proportional to population size (PPS) of the region, the allocation of 10 provinces in Luzon, and 5 in Visayas and 6 in Mindanao were as follows:

LUZON		VISAYAS		MINDANAO	
Region I	1	Region VI	2	Region IX	1
CAR/REG II	1	Region VII	1	Reg X	1
Region III	2	Region VIII	1	CARAGA	1
Region IV	3	Non-quota	1	Region XI	1
Region V	1			Region XII	1
Non-quota	2			ARMM	1
	----		----		----
TOTAL	10		5		6

The non-quota provinces were selected without replacement using probability proportional to their remainders. The remainders are fractions derived when the proportion of the regions (based on their respective study area) are multiplied by 10 for Luzon, and 5 for

Visayas and 6 for Mindanao. For instance, if 1.45 is obtained for Region I, then 1 province is assigned to this region and remaining fraction of 0.45 is included for the allocation of the non-quota province.

Given the quota for each region, sample provinces were then selected by PPS, without replacement. An additional provision is that each region must receive at least one province.

Stage 2. Allocation and selection of sample municipalities

Within each study area, 30 municipalities were allocated among the sample provinces. 30 was multiplied by the proportion of the provinces. The resulting integers became the number of municipalities in that province. If there were remaining municipalities to be allocated, they were distributed using probability proportional to the remainders.

Sample municipalities were then selected from within each sample province with probability proportional to population size, without replacement. An additional provision was that each province must receive at least one municipality.

Stage 3. Allocation and Selection of Sample Spots

Once the sample provinces have been selected, 60 spots for each of the major areas were allocated among the sample provinces. Using the quota set for each spot in each region, the spots were distributed in such a way the each province was assigned a number of spots roughly proportional to its population size.

LUZON		VISAYAS		MINDANAO	
Region I	8	Region VI	24	Region IX	10
CAR+REG II	8	Region VII	22	Reg X	9
Region III	15	Region VIII	14	CARAGA	7
Region IV	21			Region XI	17
Region V	8			Region XII	8
				ARMM	9
	----		----		----
TOTAL	60		60		60

Sample barangays within each sample province were randomly selected with equal probabilities.

Sample barangays were then classified as urban or rural based on the latest National Statistics Office classification (2000).

Stage 4. Selection of Sample Households

For the fourth stage, within each sample spot, five households were established by systematic sampling. In urban barangays as well as in rural barangays, designated starting points were randomly assigned - it was either: 1) a municipal/barangay hall, 2) a school, 3) the barangay captain's house, or 4) a church/chapel/mosque. A random start

from 1-6 was also randomly generated for each spot. Thus, if a particular spot has a random start of 4, the first sample household should be the 4th household from the designated starting point. The sampling interval for urban barangays was seven, while for rural barangays it was two.

Stage 5. Selection of Sample Respondents

For the fifth and final stage, as discussed earlier, a respondent was randomly chosen from among the voting-age adults in each selected household using a probability respondent selection table.

5. Research Methodology

a. Preparation

(1) Questionnaire

The definitive language version of the questionnaire, Tagalog, was translated into English, Cebuano, Ilonggo, Ilocano, Bicolano and Waray by language experts. Then the language translation underwent cognitive pretests to make sure that the messages were conveyed accurately.

(2) Pre-Testing and Finalizing the Questionnaire

SWS pre-tested the questionnaire on 8 voting-age adults from different socio-economic classes in order to:

- Determine the time length of the interview
- Improve the wording of the questions, if necessary
- Eliminate unnecessary questions or add new items, as the case may be
- Test question sequence and identify bases
- Correct and improve translation
- Change open-ended questions into multiple-choice questions
- Find out which items are conceptually vague
- Check accuracy and adequacy of the questionnaire instructions
- Determine whether the focus of the question is clear
- Identify interviewer's recording difficulties

(3) Training

(a) Training was conducted in 11 central locations: the SWS Office in Quezon City, Isabela City, Palawan, Sorsogon, Bacolod City, Cebu City, Calbayog City, Pagadian City, Iligan City, Davao City and Cotabato City. The interviewers needed to cover NCR, Pampanga, Bulacan, Batangas and Quezon were trained in Quezon City, those trained in Isabela City covered Pangasinan, Ifugao and Quirino, those trained in Palawan covered Palawan, while those trained in Sorsogon covered Camarines Sur and Sorsogon. Those trained in Bacolod City covered Iloilo and Negros Occidental, those trained in Cebu City covered Cebu and Bohol, while those trained in Calbayog City covered Western Samar. Those trained in Pagadian City covered Zamboanga del Sur, those trained in Iligan City covered Lanao Del Norte and Misamis Occidental, those trained in Davao City covered Davao Del Sur and Surigao Del Sur, while those trained in Cotabato City covered Maguindanao.

(b) Training time - The minimum training time for group supervisors and interviewers was 2 days prior to field implementation. The third day was the start-off, where the field supervisor observed the field interviewers on their first interviews.

(c) Training Activities - These mainly consisted of:

One or two days office training to learn the basics of the project. Mock interviews among participants, i.e. field interviewers interviewing field anchors as respondents are done to get accustomed to the flow of interviewing and questionnaire format.

Interviews were practiced with a supervisor around until the interviewer could be left on her own.

(d) Evaluation of interviewer's work - All first interviews of each field interviewer were observed by her field supervisor, and then evaluated. Only after meeting a certain evaluation criteria was an interviewer left to interview on her own, although her field supervisor always stayed within the vicinity of the sample spot to conduct checks.

b. Field Work

(1) Workers on Hand

For this project, a total of 67 field staff were deployed:

Field Manager = 1

NCR

Field Supervisors = 3

Field Interviewers = 15

Balance Luzon	Field Anchors = 1 Field Auditors = 3 Field Interviewers = 13
Visayas	Field Anchors = 2 Field Auditors = 1 Field Interviewers = 11
Mindanao	Field Anchors = 2 Field Auditors = 2 Field Interviewers = 13

(2) Supervision

Supervisors reporting to the field manager monitored the study full-time. They observed interviewers, (at least 10% of total interviewers were observed by supervisors), followed-up and did surprise checks on the field interviewers. They also ensured that field logistics were received promptly and administered properly.

(3) Spot-checking

Part of quality control was to make sure at least 30% of each interviewer's output was spot-checked and back-checked. Once an incomplete or inconsistent answer was spotted in the questionnaire, the field interviewer went back to the respondent's house to re-ask the question for verification.

c. Number of Calls and Substitution

A respondent not contacted during the first attempt was visited for a second time. If the respondent remained unavailable, a substitute who possessed the same qualities (in terms of gender, age bracket, and socio-economic class) as the original respondent was interviewed. The substitute respondent was taken from another household beyond the covered intervals in the sample precinct/barangay.

d. Field Editing

(a) After each interview, the interviewer was asked to go over her own work and check for consistency.

(b) All accomplished interview schedules were submitted to the assigned group supervisor who, in turn, edited every interview.

(c) Data Processing

(1) Office editors conducted final consistency checks on all interviews prior to coding.

(2) A data entry computer program verified and checked the consistency of the encoded data before data tables were generated.

6. Weighting Procedure

To yield representative figures at the national level, census-based population weights are applied to the survey data. The weight projection is computed by dividing the projected population in the area by the sample size of the same area. Appropriate projected factors were applied so that original population proportions were reflected in the data tables using this formula.

$$\text{Projection factors (Weight)} = \frac{\text{Population}}{\text{No. of Interviews}}$$

For questions answered by the sample voting-age adults, the following projection factors were used:

	2005 NSO Projected Population Age 18 and above	Total Sample Size (PR)	Projection factor for 1 probability Respondent (000)
NCR	7,404,523	300	24.6817428933
Balance Luzon	21,377,926	300	71.2597548368
Visayas	10,024,695	300	33.4156487457
Mindanao	11,639,379	300	38.7979308684
	-----	-----	
TOTAL	50,446,523	1,200	

For questions pertaining to household (HH), the following projection factors were used:

	2005 NSO Projected HH Population	Total Sample Size	Projection factors (000)
NCR	2,371,117	300	7.9037237164
Balance Luzon	7,026,957	300	23.4231886194
Visayas	3,344,896	300	11.1496532434
Mindanao	3,886,294	300	12.9543123497
	-----	-----	
TOTAL	16,629,263	1,200	

The SPSS version of the datafile is already weighted according to the above projection factors. As the data are weighted, the total number of cases that appear is 50,447. The figure is in thousands, i.e., 50,446,523 persons representing NSO's projected number of adults (18 years old and above) for year 2005 based on the 1995 Census.

Researchers who are defining data using the ASCII files should apply these projection factors.

Jorge Vala (ICS-UL)
João Freire (ISCTE)

Sample type: description of the sampling procedure
Stratified random probability. The sample is designed to be representative of adults aged 18 or over living in private accommodation in Portugal. The sample method involved a multi-stage design: stratification by region and habitat; Selection of sampling units (100); selection of streets: selection of addresses by random route; selection of individuals by the last birthday method. See sampling procedure at the end of the document.

Fieldwork institute: TNS-Euroteste

Fieldwork methods: Face-to-face with visuals

Sample size: 1837

Response rates:

2832	A - Total issued (total sample)
71	B - Ineligible (address vacant, wrong ages,...)
2761	C - (= A - B) Total eligible (in scope sample)
1837	D - Total ISSP questionnaires received
924	E - (= C - D; = F + G + H) Total non-response
260	F - Refusals (refusing to take part)
526	G - Non-contact (never contacted)
138	H - Other non-response

Language: Portuguese

Weighted: yes

Weighting procedure: exact description of the weighting procedure / algorithm
Data were weighted in order to reproduce the population distribution according to the following variables: NUTSII, size of locality, age groups, gender and educational level.

Known systematic properties of the sample: description of biases or other deviations of the sample
There are deviations regarding the variable sex (more women) and age (older people). These deviations are corrected with the weighting

variable.

Deviations from ISSP questionnaire:

This module was done at the same time as the 2006 module on Role of Government. We created only one questionnaire containing the questions of both modules.

Russia
ISSP 2005
Work Orientations III
Study Description

ISSP Study Description Form - Russia

Study title: 'ISSP-2005 Module "Work Orientation III"

Fieldwork dates: January 20.01.-24.01.06

Principal investigators: L.Khakhulina, Levada-Center

Sample type: description of the sampling procedure

Stratification procedure. Nationwide sample (N=1600) was distributed among:

- a) 7 large macro regions proportionate to the size of the local population aged 18+ of each macro region
- b) 5 strata of rural districts and urban settlements* in each of 7 macro regions proportionate to the size of the local population aged 18+ of each stratum.

- * 1) rural settlements
- 2) urban settlements up to 100,000
- 3) towns 100,000 - 500,000
- 4) cities 500,000 – 1,000,000
- 5) over 1,000,000 inhabitants

Sample design is based on the Census 2002.

The following categories were excluded from the gross sample:

- a) individuals doing their military service by draft (about 1%)
- b) individuals under imprisonment (about 0,8%)
- c) population of the areas under the war conflict in North Caucasus (1,9%)
- d) population of remote or difficult to access regions of Far North (0,9)
- e) rural localities with less than 50 inhabitants (0,8%)

Selection primary sampling units (PSUs). All cities over 1,000,000 inhabitants were included in the sample as self-representative units.

Urban and rural settlements were considered as primary sample units (PSUs). In each stratum (except strata of cities over 1,000,000 and 2 capital cities) the number of PSUs was calculated on the limitation of 7-13 interviews per PSU and the PSUs as well were selected with the probability to its sizes (the number of its inhabitants). The total numbers of interviews accounted for a stratum was distributed approximately equally among selected PSUs. **Totally 128 PSUs were selected (93 urban localities and 35 rural districts in 46 oblasts and krais of the RF).**

Selection of secondary sampling points (SSUs). Electoral districts were used as secondary sampling points. In each of the selected settlements 2 electoral districts (2 villages in rural district; in Moscow – 16, in St.Petersburg – 9 electoral districts) will be selected by

method of random numbers out of total list of electoral districts (villages) of a previously selected urban settlement (rural district).
Totally about 280 SSUs will be selected.

Selection of households. The households were selected by a random route method. If a household or a respondent refused to participate in the survey or not been achieved for 3 visits an interviewer should visit the next address from the route in the selected districts.

Selection of respondents. Within a household a member with the nearest birthday was selected for interviewing. In order to reach a selected respondent an interviewer visited each address up to 3 times in different days of a week and at different time of a day.

166	H - Other non-response (not able to answer)

Language: Russian

Weighted: yes, a weighting factor exists in the data set

Weighting procedure: exact description of the weighting procedure / algorithm

a) Main principles of weighting procedure

The total expected number N of respondents for a certain stratum* being treated equal

$$N = N_0 * P,$$

where N_0 denotes the size of total sample, P - the share of the stratum population in the entire population.

*)strata are formed by 7 regions and 4 types of settlement described above (the 5-th and 6-th types are combined here into one type) plus Moscow as a separate stratum. Totally 29 strata have been used in correction.

As a result of correction, every respondent $X[k]$ has the definite weight $W[k]$, within the limits $0 < W[k] < \sim 10$, so that the following conditions were valid:

- 1)the value of $\sum(W[k])$ for the region concerned was equal to N
- 2)for every controlled group $G[i]$ the value $Q[i]$ being equal to

$Q[i] = \text{sum}(W[k] | X[k].\text{belong to } G[i]) / N$,
was closed to a proportion $P[i]$ of group $G[i]$ in the region population

i.e. $Q[i] \sim P[i]$, $i=1,2,\dots,9$.

The value of J

being equal to $J = \text{sum}((Q[i]-P[i])**2) + (\text{sum}(W[k])/N - 1)**2$,
was used as the criterion for minimization on the weights' sets variety
(0,0001).

Study Description**

Study Description - Sweden

Study title:	Work Orientations III.
Fieldwork dates:	February 2005 to April 2005.
Principal Investigators:	Jonas Edlund (Associate Professor) and Stefan Svallfors (Professor), Department of Sociology, Umeå University, Umeå, Sweden.
Sample type:	A representative sample of the Swedish population 18-79 years.
Fieldwork institute:	SIFO.
Fieldwork methods:	Separate postal survey with several reminders. Respondents received an introductory letter and a week later a gift (value about USD 3) along with the questionnaire. The gift was free and was not associated with any obligations. See the below table for a detailed description.
Context of ISSP questionnaire:	Separate survey
Language:	Swedish
Weighted:	No
Sample size:	1371
Known bias in data	No

Fieldwork details.

7/2	Introductory letter about the survey
14/2	Postal survey + lottery ticket
21/2	Postal reminder + questionnaire
7/3	Postal reminder + questionnaire
29/3	Postal reminder + questionnaire [only to those with unknown telephone numbers]
30/3- 8/4	Reminder by telephone + questionnaire to those wishing a questionnaire [only to those with known telephone numbers]

Special notes on background variables referring to occupation

1. All occupational variables refer to the respondent's present or (if the respondent is currently not working) last occupation.
2. ISCO. 4-digit. Where information for 4-digit coding is not available, 3- or 2-digit codings have been applied, using zeros for the missing digits. Examples: isco code 733 is coded as 7330 in the datafile, isco code 73 is coded as 7300 in the datafile.

ISSP Study Description Form - Slovenia***Please use this form for reporting on Module 2006 and later!***

Study title: *Slovene Public Opinion Survey 2005/1: International Survey on Work orientation ISSP 2005*

Fieldwork dates: *March 2005 – May 2005*

Principal investigators: *Niko Toš, Public Opinion and Mass Communication Research Centre (CJMMK), Ljubljana.*

Sample type: *Universe: The adult residents of SR Slovenia, older than 18 years, living on permanent address. Excluded: Institutionalised people. Central Register of Population (a list of names and addresses constantly undated by public administration) is employed as a sampling frame. Sampling procedure: The sample is two-stage stratified random sample from Central Register of Population, where every population unit has equal probability of selection. First stage PSU selection is made by probability proportional to size of CEA (Clusters of Enumeration Areas). CEA are stratified according to 12 regions*6 type of settlement. At second stage systematic random selection inside CEA brings fixed numbers of persons with name and address. Split-halves samples were used for parallel SJM surveys.*

Fieldwork institute: *Public Opinion and Mass Communication Research Centre (CJMMK), Ljubljana*

Fieldwork methods: *Personal interviews with trained interviewers*

N. of respondents: *1002*

Details about issued sample: Please follow the standards laid down in AAPOR/WAPOR, Standard Definitions: http://www.aapor.org/pdfs/standarddefs_3.1.pdf . The numbers in the parentheses are those used in Table 2 of Standard Definitions.	1. Total number of starting or issued names/addresses (gross sample size) *	1616
	2. Interviews (1.0)	1002
	3. Eligible, Non-Interview	332
	A. Refusal/Break-off (2.10)	271
	B. Non-Contact (2.20)	37
	C. Other	24
	i. Language Problems (2.33)	0
	ii. Miscellaneous Other (2.31, 2.32, 2.35)	0
	3. Unknown Eligibility, Non-Interview (3.0)	155
	4. Not Eligible	127
	A. Not a Residence (4.50)	0
	B. Vacant Residence (4.60)	6
	C. No Eligible Respondent (4.70)	121
	D. Other (4.10,4.90)	0

* When new sample units are added during the field period via a new dwelling units list or other standard updating procedure, these additional issued units are added to the starting number of units to make up the total gross sample size. Also, when substitution is used, the total must include the originally drawn cases plus all substitute cases. See AAPOR/WAPOR Standard Definitions, pp 9-10 for further clarification.

July 01, 2005~ August 31, 2005

Principal investigators: name and institution
Ying-hwa Chang
Institute of Sociology, Academia Sinica

Sample type: description of the sampling procedure
Three-stage Stratified PPS Sampling
(1) PSU=township, (2) village (administrative unit under township), (3) individual person

Fieldwork institute: institute which conducted the survey
Center for Survey Research, Academia Sinica

Fieldwork methods: mode of interview
Face-to-face interview (pencil and paper)

Sample size: number of respondents in the final ISSP file
2171

Response rates: 45.68%

4862	A - Total issued (total sample)
110	B - Ineligible (address vacant, wrong ages,...)
4752	C - (= A - B) Total eligible (in scope sample)
2171	D - Total ISSP questionnaires received
2581	E - (= C - D; = F + G + H) Total non-response
799	F - Refusals (refusing to take part)
1760	G - Non-contact (never contacted)
22	H - Other non-response

Language: language or languages of the field instrument
Mandarin Chinese, Fukien dialect, or Hakka dialect

Weighted: Yes

Weighting procedure: The data was weighted using an iterative proportional raking scheme. For each respondent, sample data was weighted by sex, age, urbanization and education degree groups. Weights were then generated to match the population characteristics of Taiwan area.

Known systematic properties of the sample: description of biases or other deviations of the sample
A non-response bias comes from the use of household registration data in which some household members in fact do not live in the household.

Deviations from ISSP questionnaire:

Study Description**

ISSP Study Description Form – South Africa

Study title: South African Social Attitude Survey 2005

Fieldwork dates: August-September 2005

Principal investigators: Dr.S.P Rule:
Human Sciences Research Council

Sample type: A sample of 3 465 respondents was selected throughout South Africa in 500 census enumerator areas (EAs) as determined in the 2001 census. Each EA was classified in terms of the dominant lifestyle category by the Human Sciences Research Council (HSRC) in its analysis of the 1996 census data. In order to ensure adequate representation in the sample from each province and from each of the four dominant population groups, the sample was stratified by province and by population group. Disproportionately large samples were selected from areas know to be inhabited by the two smallest components of the population, namely (i) areas with dominantly Indian populations and (ii) the Northern Cape. Within the EAs, the households were randomly selected and within the household, the respondent were selected using a Kish grid.

Fieldwork institute: Human Sciences Research Council

Fieldwork methods: Face-to-face interviews

Sample size: 2884

Response rates:

3465	A - Total issued (total sample)
121	B - Ineligible (address vacant, wrong ages ..)
3344	C - (= A - B) Total eligible (in scope sample)
2884	D - Total ISSP questionnaires received
460	E - (= C - D; = F + G + H) Total non-response
228	F - Refusals (refusing to take part)
222	G - Non-contact (never contacted, selected respondent not contacted)
10	H - Other non-response (Communication problem., mental fit...)

Language: English, Afrikaans, Tswana, Venda, Zulu, Tsonga

Weighted: Yes

Weighting procedure: Explicit stratification variables: Province, population group and geography type (viz. urban formal, urban informal, tribal and rural formal, including commercial farms).

The EA (census enumerator area) is used as PSU (primary sampling unit) and the number of households (HHs) in the EA as the MOS (measure of size). EA's are drawn within the explicit strata pps and a fixed number of households drawn per drawn EA. Within each drawn HH one person 16 years or older is drawn at random using Kish's grid.

Non-response adjustment = number of drawn HHs per EA / number of responding HHs (i.e. where a person 16+ is successfully interviewed) provided that at least 50% of households responded. Otherwise two similar (i.e. in the same explicit stratum) and neighbouring EAs are combined and a combined adjustment factor calculated.

Person and household weights are benchmarked using the SAS CALMAR macro and province, population group, gender and 5 age groups (i.e. 16-24, 25-34, 35-49, 50-59 and 60 and older) as benchmark variables for persons and province and population group of the respondent in the household for households as benchmark variables. The marginal totals for the benchmark variables are obtained from the applicable midyear estimates as published by Statistics South Africa. In other words, the estimated South African population for the applicable year is used as target population.

Rescaling not explicitly but only implicitly

I assume that this question relates to whether sample sizes are rescaled with the view to do cross-tabulating analyses using STATA. Sub-class analyses are done by using SAS surveymeans, using the "domain" facility.

Known systematic properties of the sample:

Disproportionately large samples were selected from areas known to be inhabited by the two smallest components of the population, namely (i) areas with dominantly Indian populations and (ii) the Northern Cape

Deviations from ISSP questionnaire:

None

Approximation of years of schooling in Switzerland, population 18 years and older

The Swiss federal Census asks for the highest achieved education, not for the years of schooling. Therefore they make an approximate calculation of the years of schooling.

<i>OFS</i> (Swiss federal statistics office)	Years of schooling (approxim. of A. Borkowski, OFS)	ISCED code	<i>ISCED</i>
Aucune formation achevée	0-8	0	Not completed primary education
Scolarité obligatoire	9	2	Lower secondary
Ecole de culture générale ou préparant à une formation	12	3	Upper secondary
Apprentissage, école professionnelle à plein temps	12	3	
Maturité	13	3	
Ecole normale	13	3	
Formation professionnelle supérieure	14	4	Post secondary
Ecole professionnelle supérieure	14	5	
Haute école spécialisée	16	5	First stage of tertiary
Université, haute école	19	5-6	First and second stage of tertiary education
Sans indication			No indication

<i>ISCED</i>	%	Approximate years of schooling
Total	100	
Not completed primary education	3.0	0-8
Lower secondary or second stage of basic education	21.6	9
Upper secondary education	49.4	12-13
Post secondary, non tertiary education	9.5	14
First stage of tertiary education	1.1	16
First and second stage of tertiary education	6.8	19
No indication	8.6

Characteristics of National Population**

National benchmark information

Finally, sample distributions can be compared to known distributions in the national population or other (presumably more representative) surveys. However, in order to make a valid comparison, one has to make sure that the variables in question are identically measured. We believe this can be done with sufficient precision with respect to:

- Formal marital status
- Age
- Sex
- Participation in last national election

Note that we do not believe that highest/current education or main activity can be compared to national benchmark information, because responses to these questions are too sensitive to question formats.

The weight was developed using iterative proportional fitting with a precision of $\pm 1\%$ of the margins of the benchmark distributions.

Table 4: Benchmark distributions, unweighted sample data and weights			
URBANIZATION*	Benchmark	Weight	
• Rural (A1-A5)	14.1	1.008	
• Towns (B1-B5)	36.3	0.945

Sources: * Sampling frame, ** Household box, *** Population statistics			

In summary, it can be said that one group was severely underrepresented in our effective sample: young adults, in particular in as far as they live in their parents' households. Among these, the younger children (16 year olds) are particularly underrepresented. However, the highest marginal weight (2.1) is generated for non-voters. Non-voting has been found to be a strong correlate of non-response in surveys, as is the presence of name and phone number in the address register. Note on the other hand, that the sample is fairly representative with respect to education and main activity. An unexpected finding is that the four large cities are only moderately underrepresented and that some under-representation occurs in rural areas.
