Additional text not in questionnaire:

Month of divorce - first marriage

Until 2000:

<If respondent is married and first marriage ended in divorce>

Please, tell me again in which year you got married.

In case you have been married more than once, please start with the year of your first marriage.

(Int.: If respondent has been married more than once.)

Would you please tell me, starting with your first marriage, when you were widowed or got divorced?

(Int.: Please be careful to ascertain for each marriage:

a) year respondent got married

b) year of divorce or death of spouse.)

2010:

<If respondent is married (incl. civil partnerships) and first marriage ended in divorce>

For each of your marriages, beginning with the first, please tell me when the marriage took place and when it ended.

When did you marry for the {nth} time?

(Int.: Please find out informally whether:

The marriage is the actual marriage

The marriage ended in divorce

The marriage ended in death of spouse)

(Int.: If "the marriage ended in divorce" or "the marriage ended in death of spouse", please ask for the month and year of divorce or death.)

Comment:

From 1980 to 1984, a single question was used to survey the data in this variable together with the data in V997 (last spouse).

Note:

Occupational Training of <Ex->Spouse

In ALLBUS 1980-84 respondents were asked to choose their last occupational qualification from a list of categories. Only one answer was permitted. As of 1988, occupational qualification has been surveyed in a multiple response question (cf. V936-V949 and V998-V1009).

For 1988 and 1990, the data in V935 was reconstructed by summarizing the information in V936-V939, V941-V943 and V945-V949. The reconstruction of data in V997 is based on V998 to V1009. There are, however, a number of factors to consider when working with the reconstructed data:

- There is no clear information as to which qualification is actually the last one. Therefore, the default assumption has been that the highest qualification was also the last qualification.

- There is a possibility that the extended list of categories used from 1988 onwards has influenced the respondents'

answer.

- As of 1988 the list contains the additional code 9 'Completed other occupational training'.

- Until 1984, code 1 explicitly includes respondents who attended a vocational school without being in a traineeship scheme.

- In 1980-1984 code 3 was 'Completed commercial or other traineeship'. As of 1988 this category has been restricted to 'Completed commercial traineeship' (cf. V942 and V1003).

These differences in the actual survey praxis can lead to a bias in the data. One example is code 1 'Completed commercial or other traineeship'. As of 1988, the (reconstructed) value is lower than expected for the above mentioned reasons.

In 1991, occupational training was surveyed using two different lists of items, one for East Germany and one for West Germany. With ALLBUS 1992 these two lists were combined into a common list for both East and West Germany. However, due to the largely incomparable systems of education in East and West, the practice of reconstructing V935 and V997 was discontinued after 1990.

Occupational Training of Spouse

The questions on the occupational training of the respondent's spouse were asked in varying contexts and constellations in the original surveys:

- Variables V936 and V937 were surveyed in 1988 only.

- Variables V940 and V944 have only been surveyed as of 1991.

- In 1991, V940 and V944 were exclusively surveyed in the new federal states, while V945 and V947 were only surveyed in the old federal states.

Note:

Occupational Training of Spouse

The questions on the occupational training of the respondent's spouse were asked in varying contexts and constellations in the original surveys:

- Variables V936 and V937 were surveyed in 1988 only.

- Variables V940 and V944 have only been surveyed as of 1991.

- In 1991, V940 and V944 were exclusively surveyed in the new federal states, while V945 and V947 were only surveyed in the old federal states.

Note:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO classification of 1968.

Respondents are assigned prestige values according to their three-digit ISCO occupational categories. If possible, undefinable and not classifiable cases (code 1004) receive prestige values according to their occupational minor group. Cases which cannot be classified according to their occupational minor group receive the average prestige value of their occupational major group. Only the following categories from the occupational major group rest defined as 'missing':

One-digit	Prestige scale	
0	0	Not applicable
97	99.7	Refused
98	99.8	Don't know
99	99.9	No answer

Note:

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener.

Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

For further explanation see:

Note:

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

John H. Goldthorpe 1980:

Social Mobility and Class Structure in Modern Britain, Oxford: Clarendon Press. (As an explanation of the theoretical background.)

The class scheme by Goldthorpe groups individuals on the basis of their occupational position (reference number) and their occupational function (using ISCO 1968). By combining these two variables, 12 different class categories are then constituted.

In contrast to an 'hierarchical' scale, based for instance on prestige and status, the Goldthorpe index is rather oriented towards a nominal concept of class structure. This makes it especially useful in analyzing, for example, the development of industrial societies into service societies, because the categories of the Goldthorpe class scheme allow a more precise analysis and description of the growth or decline of different parts of the middle classes or of various groups of dependent employees and civil servants than scales which consist of horizontally differentiated ordinal status or prestige measures.

Moreover, the Goldthorpe class scheme in its present form is especially suitable for internationally comparative analyses (e.g. analyses of social mobility).

Note:

International Standard Classification of Occupations (ISCO 1988)

Source:

International Labour Office (ed.) 1990:

International Standard Classification of Occupations. ISCO-88, Genf.

Until 2010, the categories of the open question on occupations were coded by GESIS based on the official German translation of the source cited above, which was provided by the 'Federal Statistical Office' (Statistisches Bundesamt). Some new Codes, marked '*' in this documentation, were added when ISCO-88 was introduced with ALLBUS 1992.

In 2012, ISCO coding was performed by infas (infas Institut für angewandte Sozialwissenschaft GmbH, Friedrich-Wilhelm-Str. 18, 53113 Bonn).

All codes in the data file are in a four digit format. Where necessary, leading zeros were added.

Remarks:

(*) new codes added by ZUMA

(1) This occupational group is intended to cover persons who, as directors, chief executives or department managers, manage enterprises, organizations or departments, requiring a total of three or more managers.

(2) This occupational group is intended to include persons who, either on their own behalf or on behalf of the proprietor, manage enterprises or in some cases organizations with the help of non-managerial staff and no more than one other senior staff, who should also be classified in this sub-major group, because this person's responsibilities will usually be more varied than those of a department manager in a larger enterprise or organization. Non-managerial staff should be classified according to their specific tasks.

(3) This code was introduced to supplement the existing ISCO-classification. It was taken from the European Community variant of the classification called ISCO 88 (COM).

Standard International Occupational Prestige Scale (SIOPS)

The "Standard International Occupational Prestige Scale" is based on the ISCO classification of 1988. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO 1968.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO.

Comment:

The prestige values for 1992-2006 were retroactively prepared for this cumulative data set. Interested persons can obtain the respective SPSS routine from the archive (please contact Michael Terwey).

Note:

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

Note:

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

Note:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO classification of 1968.

Respondents are assigned prestige values according to their three-digit ISCO occupational categories. If possible, undefinable and not classifiable cases (code 1004) receive prestige values according to their occupational minor group. Cases which cannot be classified according to their occupational minor group receive the average prestige value of their occupational major group. Only the following categories from the occupational major group rest defined as 'missing':

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

Robert Erikson, John H. Goldthorpe, Wolfgang König, Paul Lüttinger and Walter Müller 1989:

The International Mobility Superfile (IMS) - Documentation -, CASMIN-Projekt, Mannheim. (Application of the class scheme to international data.)

John H. Goldthorpe 1980:

Social Mobility and Class Structure in Modern Britain, Oxford: Clarendon Press. (As an explanation of the theoretical background.)

The class scheme by Goldthorpe groups individuals on the basis of their occupational position (reference number) and their occupational function (using ISCO 1968). By combining these two variables, 12 different class categories are then constituted.

In contrast to an 'hierarchical' scale, based for instance on prestige and status, the Goldthorpe index is rather oriented towards a nominal concept of class structure. This makes it especially useful in analyzing, for example, the development of industrial societies into service societies, because the categories of the Goldthorpe class scheme allow a more precise analysis and description of the growth or decline of different parts of the middle classes or of various groups of dependent employees and civil servants than scales which consist of horizontally differentiated ordinal status or prestige measures.

Moreover, the Goldthorpe class scheme in its present form is especially suitable for internationally comparative analyses (e.g. analyses of social mobility).

Remarks:

(*) new codes added by ZUMA

(1) This occupational group is intended to cover persons who, as directors, chief executives or department managers, manage enterprises, organizations or departments, requiring a total of three or more managers.

(2) This occupational group is intended to include persons who, either on their own behalf or on behalf of the proprietor, manage enterprises or in some cases organizations with the help of non-managerial staff and no more than one other senior staff, who should also be classified in this sub-major group, because this person's responsibilities will usually be more varied than those of a department manager in a larger enterprise or organization. Non-managerial staff should be classified according to their specific tasks.

(3) This code was introduced to supplement the existing ISCO-classification. It was taken from the European Community variant of the classification called ISCO 88 (COM).

Comment:

From 1980 to 1984, a single question was used to survey the data in this variable together with the data in V934 (current spouse).

For certain years this variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

Comment:

From 1980 to 1984, a single question was used to survey the data in this variable together with the data in V935 (current spouse).

Note:

Occupational Training of <Ex->Spouse

In ALLBUS 1980-84 respondents were asked to choose their last occupational qualification from a list of categories. Only one answer was permitted. As of 1988, occupational qualification has been surveyed in a multiple response question (cf. V936-V949 and V998-V1009).

For 1988 and 1990, the data in V935 was reconstructed by summarizing the information in V936-V939, V941-V943 and V945-V949. The reconstruction of data in V997 is based on V998 to V1009. There are, however, a number of factors to consider when working with the reconstructed data:

- There is no clear information as to which qualification is actually the last one. Therefore, the default assumption has been that the highest qualification was also the last qualification.

- There is a possibility that the extended list of categories used from 1988 onwards has influenced the respondents'

answer.

- As of 1988 the list contains the additional code 9 'Completed other occupational training'.

- Until 1984, code 1 explicitly includes respondents who attended a vocational school without being in a traineeship scheme.

- In 1980-1984 code 3 was 'Completed commercial or other traineeship'. As of 1988 this category has been restricted to 'Completed commercial traineeship' (cf. V942 and V1003).

These differences in the actual survey praxis can lead to a bias in the data. One example is code 1 'Completed commercial or other traineeship'. As of 1988, the (reconstructed) value is lower than expected for the above mentioned reasons.

In 1991, occupational training was surveyed using two different lists of items, one for East Germany and one for West Germany. With ALLBUS 1992 these two lists were combined into a common list for both East and West Germany. However, due to the largely incomparable systems of education in East and West, the practice of reconstructing V935 and V997 was discontinued after 1990.

Note:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO classification of 1968.

Respondents are assigned prestige values according to their three-digit ISCO occupational categories. If possible, undefinable and not classifiable cases (code 1004) receive prestige values according to their occupational minor group. Cases which cannot be classified according to their occupational minor group receive the average prestige value of their occupational major group. Only the following categories from the occupational major group rest defined as 'missing':

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

Robert Erikson, John H. Goldthorpe, Wolfgang König, Paul Lüttinger and Walter Müller 1989:

The International Mobility Superfile (IMS) - Documentation -, CASMIN-Projekt, Mannheim. (Application of the class scheme to international data.)

John H. Goldthorpe 1980:

Social Mobility and Class Structure in Modern Britain, Oxford: Clarendon Press. (As an explanation of the theoretical background.)

The class scheme by Goldthorpe groups individuals on the basis of their occupational position (reference number) and their occupational function (using ISCO 1968). By combining these two variables, 12 different class categories are then constituted.

In contrast to an 'hierarchical' scale, based for instance on prestige and status, the Goldthorpe index is rather oriented towards a nominal concept of class structure. This makes it especially useful in analyzing, for example, the development of industrial societies into service societies, because the categories of the Goldthorpe class scheme allow a more precise analysis and description of the growth or decline of different parts of the middle classes or of various groups of dependent employees and civil servants than scales which consist of horizontally differentiated ordinal status or prestige measures.

Moreover, the Goldthorpe class scheme in its present form is especially suitable for internationally comparative analyses (e.g. analyses of social mobility).

International Standard Classification of Occupations (ISCO 1988)

Source:

International Labour Office (ed.) 1990:

International Standard Classification of Occupations. ISCO-88, Genf.

The categories of the open question on occupations were coded by ZUMA based on the official German translation of the source cited above, which was provided by the 'Federal Statistical Office' (Statistisches Bundesamt). Some new Codes, marked '*' in this documentation, were added when ISCO-88 was introduced with ALLBUS 1992. All codes in the data file are in a four digit format. Where necessary, leading zeros were added.

Remarks:

(*) new codes added by ZUMA

(1) This occupational group is intended to cover persons who, as directors, chief executives or department managers, manage enterprises, organizations or departments, requiring a total of three or more managers.

(2) This occupational group is intended to include persons who, either on their own behalf or on behalf of the proprietor, manage enterprises or in some cases organizations with the help of non-managerial staff and no more than one other senior staff, who should also be classified in this sub-major group, because this person's responsibilities will usually be more varied than those of a department manager in a larger enterprise or organization. Non-managerial staff should be classified according to their specific tasks.

(3) This code was introduced to supplement the existing ISCO-classification. It was taken from the European Community variant of the classification called ISCO 88 (COM).

Comment:

Since 1986, the ALLBUS-interview has usually been accompanied by a self-completion questionnaire for the German ISSP-survey (International Social Survey Programme (ISSP)). As a rule the ISSP-questions are not included in this cumulative data set. However, the question documented here has been part of the ALLBUS-interview several times. As an exception to the rule, the relevant ISSP-data was therefore included in this data set.

Note:

Occupational Training of the Respondent's Steady Extra-Marital Partner

The questions on the occupational training of the respondent's steady extra-marital partner were asked in varying contexts and constellations in the original surveys:

- Variables V1047 and V1048 were surveyed in 1988 only.

- Variables V1051 and V1055 have only been surveyed as of 1991.

- In 1991, V1051 and V1055 were exclusively surveyed in the new federal states, while V1056 and V1058 were only surveyed in the old federal states.

Note:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO classification of 1968.

Respondents are assigned prestige values according to their three-digit ISCO occupational categories. If possible, undefinable and not classifiable cases (code 1004) receive prestige values according to their occupational minor group. Cases which cannot be classified according to their occupational minor group receive the average prestige value of their occupational major group. Only the following categories from the occupational major group rest defined as 'missing':

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

The International Mobility Superfile (IMS) - Documentation -, CASMIN-Projekt, Mannheim. (Application of the class scheme to international data.)

John H. Goldthorpe 1980:

Social Mobility and Class Structure in Modern Britain, Oxford: Clarendon Press. (As an explanation of the theoretical background.)

The class scheme by Goldthorpe groups individuals on the basis of their occupational position (reference number) and their occupational function (using ISCO 1968). By combining these two variables, 12 different class categories are then constituted.

In contrast to an 'hierarchical' scale, based for instance on prestige and status, the Goldthorpe index is rather oriented towards a nominal concept of class structure. This makes it especially useful in analyzing, for example, the development of industrial societies into service societies, because the categories of the Goldthorpe class scheme allow a more precise analysis and description of the growth or decline of different parts of the middle classes or of various groups of dependent employees and civil servants than scales which consist of horizontally differentiated ordinal status or prestige measures.

Moreover, the Goldthorpe class scheme in its present form is especially suitable for internationally comparative analyses (e.g. analyses of social mobility).

International Standard Classification of Occupations (ISCO 1988)

Source:

International Labour Office (ed.) 1990:

International Standard Classification of Occupations. ISCO-88, Genf.

Until 2010, the categories of the open question on occupations were coded by GESIS based on the official German translation of the source cited above, which was provided by the 'Federal Statistical Office' (Statistisches Bundesamt). Some new Codes, marked '*' in this documentation, were added when ISCO-88 was introduced with ALLBUS 1992.

In 2012, ISCO coding was performed by infas (infas Institut für angewandte Sozialwissenschaft GmbH, Friedrich-Wilhelm-Str. 18, 53113 Bonn).

All codes in the data file are in a four digit format. Where necessary, leading zeros were added.

Remarks:

(*) new codes added by ZUMA

(1) This occupational group is intended to cover persons who, as directors, chief executives or department managers, manage enterprises, organizations or departments, requiring a total of three or more managers.

(2) This occupational group is intended to include persons who, either on their own behalf or on behalf of the proprietor, manage enterprises or in some cases organizations with the help of non-managerial staff and no more than one other senior staff, who should also be classified in this sub-major group, because this person's responsibilities will usually be more varied than those of a department manager in a larger enterprise or organization. Non-managerial staff should be classified according to their specific tasks.

(3) This code was introduced to supplement the existing ISCO-classification. It was taken from the European Community variant of the classification called ISCO 88 (COM).

Note:

Standard International Occupational Prestige Scale (SIOPS)

The "Standard International Occupational Prestige Scale" is based on the ISCO classification of 1988. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO 1968.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO.

Comment:

The prestige values for 1992-2006 were retroactively prepared for this cumulative data set. Interested persons can obtain the respective SPSS routine from the archive (please contact Michael Terwey).

Note:

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

For further explanation see:

Bernd Wegener 1984:

Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Note:

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

Note:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO classification of 1968.

Respondents are assigned prestige values according to their three-digit ISCO occupational categories. If possible, undefinable and not classifiable cases (code 1004) receive prestige values according to their occupational minor group. Cases which cannot be classified according to their occupational minor group receive the average prestige value of their occupational major group. Only the following categories from the occupational major group rest defined as 'missing':

One-digit	Prestige scale	
0	0	Not applicable
97	99.7	Refused
98	99.8	Don't know
99	99.9	No answer

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

Goldthorpe class scheme:

Derived from information on the last occupation of the respondent's steady partner

0 Not applicable, insufficient occupational information for classification in class scheme; not available 1980-1986, 1994-2012

1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)

2 Lower grades of the service class

3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)

4 Proprietors, artisans etc. with 2-49 employees

5 Small proprietors, artisans etc. with one or no employees

6 Farmers (self-employed)

7 Technicians, supervisors of manual workers (foremen, master craftsmen)

8 Skilled workers

9 Unskilled and semi-skilled workers

10 Agricultural workers

11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)

12 From 1991: Farmer on a cooperative farm

The Goldthorpe Class Scheme

For further information see:

Petra Beckmann and Reiner Trometer 1991:

Robert Erikson, John H. Goldthorpe, Wolfgang König, Paul Lüttinger and Walter Müller 1989:

The International Mobility Superfile (IMS) - Documentation -, CASMIN-Projekt, Mannheim. (Application of the class scheme to international data.)

John H. Goldthorpe 1980:

Social Mobility and Class Structure in Modern Britain, Oxford: Clarendon Press. (As an explanation of the theoretical background.)

The class scheme by Goldthorpe groups individuals on the basis of their occupational position (reference number) and their occupational function (using ISCO 1968). By combining these two variables, 12 different class categories are then constituted.

In contrast to an 'hierarchical' scale, based for instance on prestige and status, the Goldthorpe index is rather oriented towards a nominal concept of class structure. This makes it especially useful in analyzing, for example, the development of industrial societies into service societies, because the categories of the Goldthorpe class scheme allow a more precise analysis and description of the growth or decline of different parts of the middle classes or of various groups of dependent employees and civil servants than scales which consist of horizontally differentiated ordinal status or prestige measures.

Moreover, the Goldthorpe class scheme in its present form is especially suitable for internationally comparative analyses (e.g. analyses of social mobility).

Note:

Occupational Training of the Respondent's Father

In ALLBUS 1984 respondents were asked to indicate their father's occupational training by choosing his last occupational qualification from a list of categories. Only one answer was permitted. As of 1986, occupational training was surveyed in a multiple response question (cf. V1109-V1120).

For 1986-1990, the data in V1107 has been reconstructed by summarizing the information in V1109, V1110, V1112-V1114 and V1116-V1120. There are, however, a number of factors to consider when working with the reconstructed data:

- There is no clear information as to which qualification is actually the last one. Therefore, the default assumption has been that the highest qualification is also the last qualification.
- There is a possibility that the extended list of categories used from 1986 onwards has influenced the respondents' answer.
- As of 1986 the list contains the additional code 9 'Completed other occupational training'.
- In 1984, code 1 explicitly includes respondents who attended a vocational school without being in a traineeship

scheme.

- In 1984 code 3 was 'Completed commercial or other trainee-ship'. As of 1986 this category has been restricted to 'Completed commercial traineeship' (cf. V1113).

These differences in the actual survey practice can lead to a bias in the data. One example is code 1 'Completed commercial or other traineeship'. As of 1986, the (reconstructed) value is lower than expected for the above mentioned reasons.

Due to the largely incomparable systems of education in East and West, the practice of reconstructing V1107 was discontinued after 1990.

Comment:

In 1980-1986 and as of 1994, occupational position has only been surveyed using the more differentiated reference numbers in the following variable. For the relevant years, the classification in this variable was derived from the more detailed data in V1122.

Note:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO classification of 1968.

Respondents are assigned prestige values according to their three-digit ISCO occupational categories. If possible, undefinable and not classifiable cases (code 1004) receive prestige values according to their occupational minor group. Cases which cannot be classified according to their occupational minor group receive the average prestige value of their occupational major group. Only the following categories from the occupational major group rest defined as 'missing':

One-digit	Prestige scale	
0	0	Not applicable
97	99.7	Refused
98	99.8	Don't know
99	99.9	No answer

Comment:

The MPS-scores for 1980-1984 have been newly generated.

Note:

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener.

Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

For further explanation see:

Bernd Wegener 1984:

Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Note:

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

V1132 FATHER: GOLDTHORPE CLASSES ISCO 1968

Additional text not in questionnaire:

<If father is known and has been working at the time>

Goldthorpe class scheme:

Derived from information on respondent's father's occupation

- 0 Not applicable, insufficient occupational information for classification in class scheme
- 1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)
- 2 Lower grades of the service class
- 3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)
- 4 Proprietors, artisans etc. with 2-49 employees
- 5 Small proprietors, artisans etc. with one or no employee
- 6 Farmers (self-employed)
- 7 Technicians, supervisors of manual workers (foremen, master craftsmen)
- 8 Skilled workers
- 9 Unskilled and semi-skilled workers
- 10 Agricultural workers
- 11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)
- 12 From 1991: Farmer on a cooperative farm

Derivation of data:

This variable was derived from V1122 and V1123.

Robert Erikson, John H. Goldthorpe, Wolfgang König, Paul Lüttinger and Walter Müller 1989:

The International Mobility Superfile (IMS) - Documentation -, CASMIN-Projekt, Mannheim. (Application of the class scheme to international data.)

John H. Goldthorpe 1980:

Social Mobility and Class Structure in Modern Britain, Oxford: Clarendon Press. (As an explanation of the theoretical background.)

The class scheme by Goldthorpe groups individuals on the basis of their occupational position (reference number) and their occupational function (using ISCO 1968). By combining these two variables, 12 different class categories are then constituted.

In contrast to an 'hierarchical' scale, based for instance on prestige and status, the Goldthorpe index is rather oriented towards a nominal concept of class structure. This makes it especially useful in analyzing, for example, the development of industrial societies into service societies, because the categories of the Goldthorpe class scheme allow a more precise analysis and description of the growth or decline of different parts of the middle classes or of various groups of dependent employees and civil servants than scales which consist of horizontally differentiated ordinal status or prestige measures.

Moreover, the Goldthorpe class scheme in its present form is especially suitable for internationally comparative analyses (e.g. analyses of social mobility).

Source:

International Labour Office (ed.) 1990:

International Standard Classification of Occupations. ISCO-88, Genf.

Until 2010, the categories of the open question on occupations were coded by GESIS based on the official German translation of the source cited above, which was provided by the 'Federal Statistical Office' (Statistisches Bundesamt). Some new Codes, marked '*' in this documentation, were added when ISCO-88 was introduced with ALLBUS 1992.

In 2012, ISCO coding was performed by infas (infas Institut für angewandte Sozialwissenschaft GmbH, Friedrich-Wilhelm-Str. 18, 53113 Bonn).

All codes in the data file are in a four digit format. Where necessary, leading zeros were added.

Remarks:

(*) new codes added by ZUMA

(1) This occupational group is intended to cover persons who, as directors, chief executives or department managers, manage enterprises, organizations or departments, requiring a total of three or more managers.

(2) This occupational group is intended to include persons who, either on their own behalf or on behalf of the proprietor, manage enterprises or in some cases organizations with the help of non-managerial staff and no more than one other senior staff, who should also be classified in this sub-major group, because this person's responsibilities will usually be more varied than those of a department manager in a larger enterprise or organization. Non-managerial staff should be classified according to their specific tasks.

(3) This code was introduced to supplement the existing ISCO-classification. It was taken from the European Community variant of the classification called ISCO 88 (COM).

Note:

Standard International Occupational Prestige Scale (SIOPS)

The "Standard International Occupational Prestige Scale" is based on the ISCO classification of 1988. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO 1968.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO.

For further explanation see:

Harry B.G. Ganzeboom and Donald J. Treiman 1996:

Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations, in: Social Science Research 25: 124 - 168.

Comment:

The prestige values for 1992-2006 were retroactively prepared for this cumulative data set. Interested persons can obtain the respective SPSS routine from the archive (please contact Michael Terwey).

Note:

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

For further explanation see:

Note:

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

Note:

Occupational Training of the Respondent's Mother

In ALLBUS 1984 respondents were asked to indicate their mother's occupational training by choosing her last occupational qualification from a list of categories. Only one answer was permitted. As of 1986, occupational training was surveyed in a multiple response question (cf. V1147-V1158).

For 1986-1990, the data in V1145 was reconstructed by summarizing the information in V1147, V1148, V1150-V1152 and V1154-V1158. There are, however, a number of factors to consider when working with the reconstructed data:

- There is no clear information as to which qualification is actually the last one. Therefore, the default assumption has been that the highest qualification is also the last qualification.
- There is a possibility that the extended list of categories used from 1986 onwards has influenced the respondents' answer.
- As of 1986 the list contains the additional code 9 'Completed other occupational training'.
- In 1984, code 1 explicitly includes respondents who attended a vocational school without being in a traineeship scheme.

- In 1984 code 3 was 'Completed commercial or other trainee-ship'. As of 1986 this category has been restricted to 'Completed commercial traineeship' (cf. V1151).

These differences in the actual survey practice can lead to a bias in the data. One example is code 1 'Completed commercial or other traineeship'. As of 1986, the (reconstructed) value is lower than expected for the above mentioned reasons.

Due to the largely incomparable systems of education in East and West, the practice of reconstructing V1145 has been discontinued as of 1991.

Comment:

Since 1986, the ALLBUS-interview has usually been accompanied by a self-completion questionnaire for the German ISSP-survey (International Social Survey Programme (ISSP)). As a rule the ISSP-questions are not included in this cumulative data set. However, the question documented here has been part of the ALLBUS-interview several times. As an exception to the rule, the relevant ISSP-data was therefore included in this data set.

99,9 No answer

Note:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO classification of 1968.

Respondents are assigned prestige values according to their three-digit ISCO occupational categories. If possible, undefinable and not classifiable cases (code 1004) receive prestige values according to their occupational minor group. Cases which cannot be classified according to their occupational minor group receive the average prestige value of their occupational major group. Only the following categories from the occupational major group rest defined as 'missing':

One-digit	Prestige scale	
0	0	Not applicable
97	99.7	Refused
98	99.8	Don't know
99	99.9	No answer

Note:

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

Note:

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

Robert Erikson, John H. Goldthorpe, Wolfgang König, Paul Lüttinger and Walter Müller 1989:

The International Mobility Superfile (IMS) - Documentation -, CASMIN-Projekt, Mannheim. (Application of the class scheme to international data.)

John H. Goldthorpe 1980:

Social Mobility and Class Structure in Modern Britain, Oxford: Clarendon Press. (As an explanation of the theoretical background.)

The class scheme by Goldthorpe groups individuals on the basis of their occupational position (reference number) and their occupational function (using ISCO 1968). By combining these two variables, 12 different class categories are then constituted.

In contrast to an 'hierarchical' scale, based for instance on prestige and status, the Goldthorpe index is rather oriented towards a nominal concept of class structure. This makes it especially useful in analyzing, for example, the development of industrial societies into service societies, because the categories of the Goldthorpe class scheme allow a more precise analysis and description of the growth or decline of different parts of the middle classes or of various groups of dependent employees and civil servants than scales which consist of horizontally differentiated ordinal status or prestige measures.

Moreover, the Goldthorpe class scheme in its present form is especially suitable for internationally comparative analyses (e.g. analyses of social mobility).

International Standard Classification of Occupations. ISCO-88, Genf.

Until 2010, the categories of the open question on occupations were coded by GESIS based on the official German translation of the source cited above, which was provided by the 'Federal Statistical Office' (Statistisches Bundesamt). Some new Codes, marked '*' in this documentation, were added when ISCO-88 was introduced with ALLBUS 1992.

In 2012, ISCO coding was performed by infas (infas Institut für angewandte Sozialwissenschaft GmbH, Friedrich-Wilhelm-Str. 18, 53113 Bonn).

All codes in the data file are in a four digit format. Where necessary, leading zeros were added.

Remarks:

(*) new codes added by ZUMA

(1) This occupational group is intended to cover persons who, as directors, chief executives or department managers, manage enterprises, organizations or departments, requiring a total of three or more managers.

(2) This occupational group is intended to include persons who, either on their own behalf or on behalf of the proprietor, manage enterprises or in some cases organizations with the help of non-managerial staff and no more than one other senior staff, who should also be classified in this sub-major group, because this person's responsibilities will usually be more varied than those of a department manager in a larger enterprise or organization. Non-managerial staff should be classified according to their specific tasks.

(3) This code was introduced to supplement the existing ISCO-classification. It was taken from the European Community variant of the classification called ISCO 88 (COM).

Note:

Standard International Occupational Prestige Scale (SIOPS)

The "Standard International Occupational Prestige Scale" is based on the ISCO classification of 1988. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO 1968.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO.

For further explanation see:

Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations, in: Social Science Research 25: 124 - 168.

Comment:

The prestige values for 2000, 2004 and 2006 were retroactively prepared for this cumulative data set. Interested persons can obtain the respective SPSS routine from the archive (please contact Michael Terwey).

Note:

Magnitudeprestige Scale (MPS) for ISCO 1968 and ISCO 1988

The Magnitudeprestige Scale is based on an alternative measurement of social prestige created by Bernd Wegener. Starting point is a prestige assessment without a list of pre-quoted categories, i.e. respondents were asked to give an implicit ratio estimation of the relative magnitude of prestige. The resulting MPS-scale describes a gradual mapping of social closure.

For further explanation see:

Bernd Wegener 1984:

Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Note:

Ganzeboom's ISEI for ISCO 1968 and ISCO 1988

In contrast to social prestige scales, this index of socio-economic status is constructed so as to include information on the educational level and the income connected to an occupational position. For ALLBUS, two versions of the index, based on ISCO 1968 and ISCO 1988 respectively, were constructed.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO.

Comment:

The surveys in 2000 and 2010 used a more differentiated answer scale than the original 1980 survey. To make the data comparable over time, categories "between 200 and 500km" and "more than 500km" were recoded into the original category "more than 200km" for this cumulative data set. Please refer to ALLBUS 2000 (ZA3450) and ALLBUS 2010 (ZA4610) for the more detailed data.

Comment:

For reasons of data protection, the data for 1988-2002, 2006, 2010 and 2012 cannot be made available in this data set. The data for 2004 was provided in a form that takes into account data protection issues making it possible to include it into this data set. In 2008, cases considered problematic were coded 999.

If you intend to work on scientific questions that demand an analysis of administrative district data on the micro level please contact the Research Data Center ALLBUS at GESIS (<http://www.gesis.org/fdzallbus>).

The coding of Berlin differs from the practice in many other statistics in that ALLBUS retains the distinction between the former East Berlin and West Berlin. This is to allow comparative analyses of East and West Germany.

Note:

Administrative District

In 1984, the list of administrative districts used in the ALLBUS-surveys was revised to reflect the regional reforms of 1977.

The following is a list of the old administrative districts from before the regional reforms, which as of 1984 are no longer used in ALLBUS (for technical reasons some of the original codes had to be marked by interposing a zero):

301: 'Hannover' (originally code = 31)

302: 'Hildesheim' (originally code = 32)

303: 'Lüneburg' (originally code = 33)

304: 'Stade' (originally code = 34)

305: 'Osnabrück' (originally code = 35)

306: 'Aurich' (originally code = 36)

307: 'Braunschweig' (originally code = 37)

308: 'Oldenburg' (originally code = 38)

61: 'Darmstadt'

62: 'Kassel'

A list of the new administrative district introduced with ALLBUS 1984:

31: 'Braunschweig'

32: 'Hannover'

33: 'Lüneburg'

34: 'Weser-Ems'

64: 'Darmstadt'

65: 'Gießen'

66: 'Kassel'

An exact mapping of old and new administrative districts is impossible due to the divergent territories of the districts. (For information about the exact borders of the administrative districts compare the yearbooks of the 'Federal Statistical Office Germany').

In 1994, the list of administrative districts was revised to reflect the changes in the regional administration of the new federal states in East Germany after unification. (For information about the exact borders of the administrative districts in the new federal states compare: Statistisches Bundesamt Deutschland (ed.) 1994: Statistisches Jahrbuch 1993, Wiesbaden: 52 - 58.)

Comment:

1991 only for respondents from the new federal states.

Note:

Political Size of Municipality

Size of Municipality categorizes the respondents' places of residence according to their number of inhabitants. For reasons of data protection uncategorized data of this kind cannot be published. Categorization of respondent's places of residence is based on information about their size as political/administrative units.

As political or administrative units are in many cases unsuitable to accurately describe the type of community in which respondents actually live, ALLBUS also provides more sophisticated regional classifications (compare V1232-V1235).

Note:

Boustedt-Type of Municipality

Political or administrative units are in many cases unsuitable to accurately describe the type of community in which respondents actually live. A case in point are, for example, small suburban communities. Although often politically and administratively independent, they are nevertheless socio-economically tied to the metropolis. ALLBUS therefore provides the 'Boustedt-type of Municipality' as an additional regional categorization (V1232 is a 7-category version, V1233 a 10-category version), which addresses these ecological factors in regional statistics. It is based, as far as possible, not on political or administrative criteria, but on the actual regional character of the place of residence.

Note:

Boustedt-Type of Municipality

Political or administrative units are in many cases unsuitable to accurately describe the type of community in which respondents actually live. A case in point are, for example, small suburban communities. Although often politically and administratively independent, they are nevertheless socio-economically tied to the metropolis. ALLBUS therefore provides the 'Boustedt-type of Municipality' as an additional regional categorization (V1232 is a 7-category version, V1233 a 10-category version), which addresses these ecological factors in regional statistics. It is based, as far as possible, not on political or administrative criteria, but on the actual regional character of the place of residence.

Note:

BIK-Type of municipality and BIK-Regions

In the early 1990s, a revision of the concept of Boustedt-municipalities (V1232, V1233) seemed in order, because this categorization was based on the census data of 1970 and there was no equivalent taxonomy for the area of the new federal states in East Germany. Based on data from the 1987 census, the BIK-Institute Aschpurwis + Behrens therefore developed a revised taxonomy of urban regions for the area of the old federal states (West Germany) - the BIK-type of municipalities and regions (V1234) - which takes into account the changes in residential patterns over the last 20 years. Compared to the older Boustedt-system, the indicators used to delimit classes have been revised extensively for this new taxonomy. For the area of the new federal states in East Germany, classification into BIK-types of municipalities and regions followed the same principles as for West Germany. However, due to a lack of comparable data, classification proceeded from a different and partly reduced database. Similar to the Boustedt-classification, categorization into BIK-regions is based on the number of residents (zones 1-3). Outside these urban regions, classification was based on the respective municipality's number of residents (categories 1-4).

As of 2002, ALLBUS uses the updated BIK-Regions (V1235) by 'BIK-Institut Aschpurwis + Behrens', which, for the first time, provide a taxonomy of regions based on a uniform set of data for both East and West Germany. Similar to the 'Boustedt-type of Municipality', classification is first based on the number of residents of a given urban region. Furthermore, this classification distinguishes four different types of region: core areas, conurbation areas, transitional areas and peripheral areas. Outside these urban regions, classification was based on the 'political size of municipality'.

V1239 MORE THAN 8 PEOPLE IN HOUSEHOLD?

<If respondent does not live alone>

I would like some information about the other people living in this household, that is not counting yourself. Please include toddlers, or people who normally live here but are currently away, e.g. in hospital or on holiday.

Please name the persons in order of their age (starting with the oldest person).

Note about each individual (e.g. "father", "child", "aunt" or an abbreviation of their first name).

From 2004:

Do any other persons live in your household?

0 Respondent lives alone (code 2 in V1117); fewer than seven persons on list of household members

1 Yes

2 No

Comment:

The exact wording of this question and its technical administration can vary slightly from survey to survey. Please compare the original documentation for details.

The preliminary question records shorthands for up to seven household members, to be used in the following part of the interview. It has been part of all ALLBUS surveys since 1980. As of 2004, the question about further household members follows whenever seven shorthands are recorded.

Household and family structures are relevant subjects of empirical sociological research for political, sociological and methodological reasons (cf. Porst 1984). Using an SPSS-program (cf. Funk 1989), suitable data has been extracted from the ALLBUS-household-demographics to form two household classifications, one detailed and one condensed, as well as a family typology. Together, these three typologies map the variety of family types and household compositions, thus forming a basis for further structural analysis.

The condensed household classification differentiates between one-person households, one- to four-generation-households, households of relatives with and without a family core - i.e. households with at least one member related to the others by kinship yet outside the line of descent - and between cohabiting communities with and without a family core. As relevant microstructures within these nine basic types of household, the detailed household classification distinguishes various combinations of kinship relations and the respondent's position within the context of the household (e.g. the detailed classification of households differentiates between married and cohabiting couples in one-generation-households and between two-generation-households in which the respondent takes the role of child and those in which the respondent takes the role of parent).

As an extension of the household-classifications, the family typology identifies nuclear families, two- to four-generation-families (in all cases differentiating complete and incomplete families), extended families (i.e. households of relatives with a family core) and composite families (i.e. cohabiting communities with a family core).

V1344 REDUCED SIZE OF HOUSEHOLD

Additional text not in questionnaire:

Until 1990:

Number of adult Germans in the household (18 years and older)

From 1991:

Number of adult Germans and foreigners in the household (18 years and older)

- 1 1 person
- 2 2 persons
- 3 3 persons
- 4 4 persons
- 5 5 persons
- 6 6 persons
- 7 7 persons
- 8 8 persons
- 9 9 persons
- 97 Refused
- 99 No answer

Note:

This variable contains information about the number of household members belonging to the ALLBUS population in the year of the survey. Until 1990, ALLBUS targeted all adult German citizens living in private households. As of 1991, adult foreign residents were also included in the target population.

Due to differences in the sampling procedures, household samples and samples of individuals use different rules for who counts as an adult in the total population. With household samples, the person to be interviewed is only chosen at the time of the actual interview. Therefore, the ALLBUS household samples (1980-1992 and 1998) comprise all members of a given household who were at least 18 years old at the time of the interview.

With samples of individuals (1994, 1996 and 2000-2008), on the other hand, the targeted respondents are chosen ahead of the actual interview. Consequently, ALLBUS samples of individuals use 1 January of the survey year as the deadline to determine whether an individual is to be regarded as an adult for the purpose of the sample.

Using slightly varying formulations, this data was surveyed directly in 1980, 1982, 1988 and 1990. In 1984, 1986 and as of 1991 the data was derived from the information provided in the list of household members above. The difference in sampling procedures was taken into account.

V1425 FRIEND A: SEX

1980 (split 1), 1990, 2000

We now have some questions about the people you spend a lot of time with socially.

They can be either relatives or friends and acquaintances you are not related to, but not people who live in your household.

To make it simple, let's call the three people A, B and C.

To avoid mixing them up, please write down on this piece of paper their first names or a special codeword to identify them.

For the next few questions, please think of person A first.

(Int.: Please hand over pen and paper - first ask questions V1425 to V1442 for 'A', then for 'B' and then for 'C' and enter answers in the adjoining table under the appropriate letter.

If no people have been named as friends or acquaintances, continue with next question.)

1980 (split 2):

We now have some questions about your circle of friends: Please think of the three people you think of as closer friends and whom you meet most frequently.

They can be either relatives or people you are not related to, but not people who live in your household.

I would just like to know some statistics about each of them, e.g. their occupation, their age etc. To make this more simple, could you give me their first names, please:

(Int.: Write first names under A/B/C respectively and circle 'male' or 'female'. Please use the first names in the next questions to indicate which person the questions refer to.

If no person has been named as friend or acquaintance, proceed with the next question. First ask questions V1425 to V1442 for 'A', then for 'B' and then for 'C'. Enter answers under the respective letter.)

For the next few questions, please always think of A.

Interviewer number

9999999 No answer

Comment:

In the original surveys the interviewer numbers vary from four to seven digits.

V1684	SEQUENTIAL NUMBER OF SAMPLE NET
-------	---------------------------------

Sequential number of sample net

0 Not available 1986, 1990-1996, 2000-2012

Comment:

The first four digits encode the year of the survey, the fifth digit is the sequential number of the sample net. See the ALLBUS methodological reports for further information about the sampling method.

V1685	SEQUENTIAL NUMBER OF SAMPLE POINT
-------	-----------------------------------

Sequential number of sample-point

0 Not available 1986, 1991-1996, 2000

Comment:

Theses sample points are geographical units that were chosen from the total of geographical units corresponding to the universe sampled. The codes have been anonymized for this data set. Nevertheless, they can still be used in statistical analyses. The first four digits encode the year of the survey, the last three digits encode the sequential number of the sample-point. See the ALLBUS methodological reports for further information about the sampling method.

V1709 RESP.: WILLING TO PARTICIPATE AGAIN?

2002:

(Int.: Please read question word for word.)

And finally, a completely different question. We plan to continue our research project with a further survey. Your participation would be very valuable for us. This is why we would like to ask you whether you would be willing to take part in a possible future interview.

For a further interview, we will have to store your address. The data protection act quite rightly requires your consent to do this. Your address will be stored separately from the questionnaire, solely for the purpose of a further interview. There is no way it can ever be linked to the answers you provide. Your data will remain absolutely anonymous.

Once the research project has been completed, your address will be permanently deleted from our records.

Your consent is naturally voluntary.

You may withdraw it at any time.

We would be very grateful if you would agree to take further part in our research project.

(Int.: If respondent is willing to be interviewed again, please transfer respondent-ID number to sheet.)

Hand over the sheet and ask respondent to fill it in.)

V1732 WILLING TO PARTICIPATE IN ONLINE SURVEY?

<If respondent uses the internet for private purposes>

2006:

Finally, there is one last thing we would like to ask you. The survey you have just taken part in is part of a research project by the Center for Survey Research and Methodology (ZUMA).

It is intended that the study will continue.

Which means we would like to interview you again in a few months time in the form of an internet survey.

For this purpose we need to store your email address.

This is subject to the data privacy regulations you can read on this sheet.

(Int.: Hand over data protection sheet. Check the address in the address record.)

2008:

Finally, there is one last thing we would like to ask you.

The survey you have just taken part in is part of a research project by GESIS.

It is intended that the study will continue.

Which means we would like to interview you again in a few months time in the form of an internet survey.

Of course your participation in the internet survey is voluntary and does not entail any further obligations. All pertaining data protections will be observed and GESIS will not provide your e-mail address to any third parties.

Would you be willing to continue supporting our research project by participating in our internet survey?

Note:

Transformation of Household Sample Data to Person-Level Data

From 1980 to 1992 and in 1998, the ALLBUS data was surveyed based on a sample of households. Therefore, analyses of this data involving the characteristics of individuals (attitudes, demographic attributes, etc.) should in principle be weighted using a transformation weight that adjusts for the effect of household size on the probability of selection for each respondent. A transformation weight suitable for analyses treating East and West Germany separately is provided in V1739.

Person-level analyses of data from household samples that target Germany as a whole must additionally address the oversampling of East German respondents from 1991 onwards. The appropriate weighting factors are calculated as the product of the transformation weight in V1739 and the person-level East-West-weight in V1740. This combined weight is provided in V1741.

Because the effects of household size on the composition of the sample are often minimized by conditions in the field - the higher selection probability of one-person households, for example, is often offset by the fact that these households are harder to contact - transformation weighting can often be neglected. However, it is always good advice to compare the results of unweighted and weighted analyses to check for any major deviations.

Application of weights:

Analysis of person-related data:

- separate for East and West Germany: V1739
- Germany as a whole: V1741

Analysis of household-related data:

- separate for East and West Germany: V1742
- Germany as a whole: V1744

Weights Adjusting for the Oversample of Respondents from East Germany

Applying the East-West-weight in V1740 adjusts for the overrepresentation of respondents from East Germany in the ALLBUS surveys using person samples (1994, 1996, 2000 and following), i.e. it obviates the need to perform separate analyses for the Western and Eastern subsample. Please note that data from samples of households is not transformed to person-level data.

Note:

Household-Level Data

The ALLBUS surveys in 1994 and 1996 and those in 2000 and following years were conducted on the basis of a person sample. These samples show a design bias favouring larger households and must consequently be weighted when performing analyses targeting household-level attributes like household income, etc. For separate analyses of the East and West German subsamples please use V1742. Household-level analyses of the sample as a whole should be weighted by V1744, which also adjusts for the overrepresentation of East German respondents. The weighting factors in V1744 are calculated as the product of V1743 (transformation weight) and V1744 (household-level East-West-weight).

The household-level East-West-weight V1743 can also be used if only data from samples of households is concerned (ALLBUS 1980 to 1992 and ALLBUS 1998). The weighting factors will adjust for the overrepresentation of East German households so that the data can be treated as representative of total Germany.

Variables by Year -

A List of Correspondences between the Cumulated Data File and the Original Studies

This list of correspondences provides an overview of those variables from the original surveys that are represented in this ALLBUS cumulation.

The first column of the following table contains a variable label indicating the content of the variable. Under the heading 'CUM', column two then lists the variable number used in this cumulated data file, while the following columns, headed '80' to '12', list the corresponding variable numbers in the original surveys.

Variables based on integrated data from several original variables are marked in column one with the label 'INTEGRATED: ...' followed by the years concerned, e.g. 'INTEGRATED: 1980-1986'. Columns '80' to '12' then list the variable numbers of the original data that entered into the integrated variable.

A dash ('-') in columns '80' to '12' indicates that this variable was not part of the ALLBUS survey in this particular year.

Finally, data that has been newly generated for this cumulated data file is marked 'NEW' in columns '80' to '12'.

Notes on the Additional ALLBUS/GGSScompact 1980-2012 (Study No. 4581)

As an alternative to ALLBUS/GGSS 1980-2012 with its relatively complex demography module, GESIS also offers an additional compact version with a reduced number of demographic variables. Providing an easily manageable selection of basic demographic descriptors, this ALLBUS/GGSScompact addresses, amongst others, the needs of newcomers to data analysis. Moreover, access conditions for ALLBUS/GGSScompact are less strict than for the more extensive ALLBUS/GGSS data, because data protection issues are less salient.

However, for reasons of data protection some of the remaining demographic data still had to be simplified. When part of the ALLBUS/GGSS survey in question, detailed data concerning the respondents' citizenship has been dichotomized ("German citizenship" vs. "No German citizenship"). The information on the respondents' occupational position has been recoded into more inclusive categories. Finally, the two largest categories of the variable 'Political Size of Municipality' have been combined. (A detailed account of recodes can be found below.)

Apart from demography, all other questions have been retained in full in the compact version. Moreover, variable labels and variable numbers in ALLBUS/GGSScompact are the same as in the unabridged ALLBUS/GGSS data set. In this way, users may easily move between both versions of the ALLBUS/GGSS data if necessary.
