## Acknowledgements

---

Standard & Special Eurobarometer surveys are conducted on behalf of the Commission of the European Communities, under the responsibility of the Directorate-General Communication and on occasion requested by other departments according to the policy they deal with. From the outset the European Commission is generously granting access to Eurobarometer primary data for re-use in social science research and training.

The integrated original datasets and related materials are delivered by the respective survey research institute in charge of survey implementation and fieldwork co-ordination.

Ronald Inglehart (University of Michigan), collaborated in the design and analysis of the surveys and helped make the data available to the social science community through the Inter-university Consortium for Political and Social Research (ICPSR). Data cleaning and processing was supported by National Science Foundation grants.

Preparation and documentation of Eurobarometer primary data for long term preservation and usability happen in a cooperative arrangement between the teams at Inter-University Consortium for Political and Social Research (ICPSR) and GESIS Data Archive for the Social Sciences.

## Introduction and preliminary remarks

---

The variable reports of the Standard & Special Eurobarometer survey series offer a comprehensive description of the data on study and variable level. For each Eurobarometer individual variable reports are provided. The reports are structured into five sections: Section one provides the description of the respective Eurobarometer Study, including bibliographic information, abstract, methodological specifications, remarks on weighting and general notes on data preparation. Section two gives an historical overview of the Eurobarometer Survey Series, including the institutional background and the development of geographical and topical coverage. A third section provides general information about the structure of Eurobarometer datasets, documentation standards and variable coding frames. Section four explains the details of the 'Variable Documentation' part in the following section five, which is the documentation of the variables with the complete question texts and answer categories of the master questionnaire and the corresponding archival remarks on data preparation or inconsistencies, if applicable. In addition, this variable report contains frequency counts, by country (sample), for almost all variables. These frequencies are based on weighted data using the adequate post-stratification weight, if applicable and as indicated in each table.

### Data access

Primary data for statistical analysis and related documentation (basic bilingual questionnaires, national field questionnaire versions and variable reports) are made available online by GESIS (<http://zacat.gesis.org>), by the Inter-university Consortium for Political and Social Research through the ICPSR membership network, and through all Social Science Data Archives members of the Council of European Social Science Data Archives (CESSDA).

### Usage requirement

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about related research activities, users of the data are requested to send to ICPSR or GESIS respectively bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data (surveys and respective variables) were used.

### Disclaimer

The original collector of the data, ICPSR, GESIS, and the relevant funding agencies bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

## 1.2 Content

### 1.2.1 Abstract

Euro-Barometer 8 was conducted by Jacques-Rene Rabier, special adviser to the Commission of the European Communities, and by Ronald Inglehart of the University of Michigan. This study is part of an ongoing program of public opinion research sponsored by the European Community. The fieldwork was carried out by a consortium of European polling organizations in all nine nations of the European Community. Respondents for Euro-Barometer 8 were interviewed in October–November, 1977.

This study continues the series of items on feelings toward European integration and the European Community that had been asked in earlier Euro-Barometers. Attitudes toward the forthcoming European parliamentary elections are a particular focus of the survey.

In addition, Euro-Barometer 8 goes into satisfaction with work and feelings about retirement. The satisfaction of housewives with their work and their possible desires for paid employment outside the home are also explored. Other questions focus on tasks that men should help with in the home, and the role of women as active participants in politics.

The personal data section of the interview obtained information about the education, occupation, marital status, age and sex of the respondent. This section also ascertained the occupation of the head of the household and composition of the household.

## 1.3 Universe

The samples of Eurobarometer 8 are designed to be representative for the national population aged 15 years and over of the 9 European Community member countries, resident in and citizen of the respective country. Two separate samples have been drawn in the United Kingdom (Great Britain and Northern Ireland).

## 1.4 Sampling procedure

The sampling designs were either multi-stage national probability samples or national stratified quota samples.

In each country a two stage sampling method is used:

### 1) Geographical distribution

The survey covers the whole territory of the nine countries, i.e. 117 regions (excluding Corsica and Val d'Aoste). In each country a random selection of sampling points is made in such a way that all types of area (urban, rural, etc.) are represented in proportion of their populations. The interviews are distributed in more or less 1.100 sampling points.

### 2) Choice of respondents

Within these sampling points the individuals to be interviewed are chosen:

a) at random from the population or electoral lists in those countries where access to suitable lists of individuals or households is possible: Belgium, Denmark, Luxembourg, Netherlands;

b) by quota sampling in France, Italy, United Kingdom and Ireland. In these cases the quota are established by sex, age and occupation on the basis of census data.

In the French sample the rural population was underrepresented. The French Weight variable should be used to produce a completely representative sample of the nation. The variable corrects the sample by age, by sex and by degree of urbanization. The samples in all other countries are unaffected by the application of the French Weight variable. The effective number of realized interviews in this round is indicated in table 1.

## 1.5 Fieldwork

Each national survey is conducted by professional polling agencies.

Table 1: Participating countries (regions) and fieldwork information for Eurobarometer 8

Country (Region)	ISO	Fieldwork start/end	Survey Research Institute	Questionnaire-versions	Sample Size (n of cases)

## 1.6 Mode of data collection

The study staff for Euro-Barometer 8 developed an equivalent French and British questionnaire for this survey. These questionnaires were made available to the national polling institutes who translated the questionnaires into their respective languages. Each national survey was conducted face-to-face and in the adequate national language(s).

## 1.7 Weighting

In general the Eurobarometer datasets provide for two types of weighting, a post-stratification sample weighting and a population size weighting.

The **post-stratification weight**, also referred to as redressment or non-response weight, carries out comparisons between the sample composition and a proper universe description with respect to selected attributes such as sex, age or region. The availability of this weight over time and for individual countries is documented in table 2. Until Eurobarometer 31 the corresponding variable is labelled NATION WEIGHT II. Only starting with Eurobarometer 32 post-stratification weights are available continuously and for all samples.

Until Eurobarometer 6 underrepresented rural cases for FRANCE are duplicated; duplicate case indicators (weights) are only available for ECS1970, ECS1971 and Eurobarometer 2. In ECS1971 and ECS1973 a special weighting factor for the NETHERLANDS indicates the number of times that a case is duplicated in the Dutch part of the dataset; the duplication scheme is not documented.

The **population size weighting** factor corrects for the fact that sample sizes do not depend on how large or small the populations are from which they are drawn.

The NATION WEIGHT I (or UK weight) ensures that both samples, Great Britain and Northern Ireland, are represented in proportion to its population size within the United Kingdom as a whole. Starting with Eurobarometer 19 the UK weight also includes the available post-stratification weighting factors for other countries.

The EUROPEAN WEIGHT adjusts each sample in proportion to its share in the total population, aged 15 and over,

EB29	X		X	X			X		X			X		X	X
EB30	X		X	X			X		X			X		X	X
EB31	X		X	X			X		X			X		X	X
EB31A	X		X	X			X		X			X		X	X
EB32	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
EB33	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X

The YOUTH OVERSAMPLES\* in Eurobarometer 17 and 28.1 are weighted separately and across ALL samples as documented in the respective study and weight variable description.

Apart from the French weight variable (v6) described in the section on sampling information, Eurobarometer 8 contains a weight variable (v7) which adjusts the British and Northern Irish respondents to their respective proportions in the United Kingdom. This variable leaves respondents in the other eight European Community nations unaffected when applied to those samples.

This study also contains a weight variable (v5) which produces a representative sample of the European Community as a whole when used in analysis. This weight variable adjusts the size of each national sample, weighting each nation in terms of its contribution to the total population of the community. This weight variable is not necessary if the analyst is only interested in the individual national samples, and not the community as a whole. The European Weight variable incorporates the French Weight variable, so that application of both weight variables simultaneously is unnecessary.

The unweighted n for the combined 9-nation file is 8826, the weighted n of this file is 9023.11. All respondents were given weight values to two implied decimal places.

## 1.8 Data preparation

The data received by the archive were first sorted and checked for missing or duplicate cards. Duplicate cards, if any, were verified then the duplicates were removed. Missing cards were replaced by missing data values. The data were then checked for illegal (wild) codes and inconsistencies which, whenever found, were assigned to missing data values. The codebook was reordered to preserve the order of the British questionnaire. (minor variations in the question order text do appear in other national questionnaires.) Indices were included as created by the original investigators.

Data processing for Euro-Barometer 8 was done by Thomas Rochon and Ginger Maggio.

## 2 Eurobarometer Series Description

---

### 2.1 Series name

The Standard and Special Eurobarometer (a.k.a. Euro-Barometer) Survey Series

### 2.2 Series information

The Standard and Special Eurobarometer surveys are the products of a unique program of cross-national and cross-temporal survey research. The effort began in early 1970, when the Commission of the European Communities sponsored simultaneous surveys of the publics of the European Community. In general they are carried out in spring and fall of each year. Three pilot studies were conducted in 1970, 1971 and 1973 under the header of European Communities Studies; "Attitudes towards Europe" (GESIS id ZA0078), the very first comparative survey across European Communities founder members in 1962, can be seen as an early forerunner. The primary data of the first explicit Eurobarometer, conducted in spring 1974, have not been preserved.

### 2.3 Principal investigators and institutional background

The Eurobarometer program was initially launched and managed until 1986 by Jacques-René Rabier, head of the Commission's press and information directorate and afterwards special advisor to the Commission of the European Communities. He counted with the political support of the European Parliament and the close co-operation of Ronald Inglehart. The political scientist at the University of Michigan was then developing his theory of value change in modern societies and his materialist/post-materialist items would become integral part of the Eurobarometer until the mid nineties. Between 1987 and 1996 the program was continued and considerably enlarged under the direction of Karlheinz Reif, since 1993 together with Anna Melich.

Anna Melich took over the Eurobarometer direction from 1997 to 1999, by then still within the organizational framework of the former Directorate-General X, Public Opinion Surveys and Research Unit. In 2000/2002 Eurobarometer were intermittently conducted in the framework of the DG Education and Culture, Citizens' Centre - Analysis of Public Opinion under the direction of Harald Hartung, and starting with Eurobarometer 54 under DG Press and Communication, initially directed by Thomas Christensen. Since 1999 the organisation and supervision of the surveys were consecutively executed by Rubén Mohedano-Brèthes (until 2002) and Renaud Soufflot de Magny (until 2006), with Antonis Papcostas as head of unit between 2003 and 2010.

The main survey results are regularly published on the European Commission's Public Opinion website in official standard and special topic reports.

### 2.4 Development of geographical and population coverage

In all European Union (formerly "European Communities") member countries Standard Eurobarometer samples were initially drawn among the national population, aged 15 and over. Starting with Eurobarometer 41.1 the target population is the population of any nationality of an European Union member country, aged 15 years and over, resident in any of the Member States. For test purposes Eurobarometer 41.0 included a non-national European Union citizens oversample.

Eurobarometer regularly include all member countries, starting with the six founder members and in accordance with the subsequent enlargement process. Norway has been in-officially included in selected waves between 1989 (EB34) and 1996 (EB46), Finland started before the actual enlargement in 1993 (EB39.0), and a few Swiss Eurobarometer were run in parallel to selected waves or topics starting in 1999 (EB51.1) in Switzerland. Candidate Countries (CC) and Accession Countries (AC) for the Eastern enlargement process were first surveyed in the Candidate Countries Eurobarometer series (2001-2004) and then all included in the standard series, even before accession as in the cases of Turkey or Macedonia.

Additional samples are drawn for Great Britain and Northern Ireland almost from the start, in Germany (East and West) after the re-unification in 1989, and in Cyprus for the Turkish Cypriote Community (Northern Cyprus) since 2004 for selected standard and topical waves.

		Norway	NO	1000	

The regular standard sample size (in the sense of completed interviews) in Eurobarometer surveys is 1000 respondents per country, except small countries like Luxembourg or Malta. The 44.2bis MEGA-survey increased the standard sample up to 6000 respondents (for the largest countries) in order to achieve more confidence for analysis on sub-national level.

Oversamples have been drawn intermittently if required by the topic, i.e. to ensure that there are enough members of the relevant population subgroup to report sufficiently reliable estimates. Intentionally more people are selected from the respective group than would typically be done if everyone in the sample had an equal chance of being selected.

Table 4: Oversamples for special topic Eurobarometer

Topic	(Over-)Sample	Eurobarometer Survey
Young Europeans	Youth aged 15-24	17, 28.1, 34.2, 47.2OVR, 55.1OVR
Elderly Europeans	Elderly aged 60+	37.2

Working Conditions	Professionally active	37.0+1, 39.0+1
Drug Abuse	Youth aged 15-24	43.0+1, 57.2OVR
Education Issues	Youth aged 15-24	44.0 / 44.1 (data not integrated)

## 2.5 Standard question program and special topics

Standard Eurobarometer surveys were designed to provide a regular monitoring of the social and political attitudes among the European publics, to obtain regular readings of support for European integration, public awareness of and attitudes toward European unification, the institutions of the European Community / European Union, and its policies in complementary fashion. Attitudes toward the organization and role of the European Parliament and electoral behavior became a major topic in pre- and post- European Elections times. The standard program was complemented by measures of general socio-political orientations, of subjective satisfaction and the perceived quality of life, or of cultural, national and European identities.

Intermittently Standard Eurobarometer have investigated SPECIAL TOPICS, such as agriculture, biotechnology, energy, environment, family planning, gender roles, health related issues, immigration, poverty and social exclusion, regional identity, science and technology, information society, working conditions, urban traffic, knowledge of languages etc. In the case of some supplementary studies, special youth and elderly samples have been drawn (see table 4).

Starting with Eurobarometer 34 (1990) additional supplementary surveys on special issues have been conducted under each main wave number, identified by dot-separated sub-numbers for each individual survey. Usually only one survey per main wave includes the standard and trend module with focus on European integration issues. The following list (table 5) identifies the surveys containing the standard module and with results reported in the corresponding official standard report, or which at least include a subset of standard indicators, or with focus on European integration in a special topic context (e.g. "The future of Europe" in Eurobarometer 65.1).

Table 5: Overview of Eurobarometer surveys with standard EU and trend question modules

Further and regularly updated information on the Eurobarometer survey series is provided through the GESIS Eurobarometer Data Service micro-site: <http://www.gesis.org/eurobarometer>

## 3 Dataset structure and standards

---

Standard and Special Eurobarometer are processed and documented by the Inter-university Consortium for Political and Social Research (ICPSR) and by the GESIS Data Archive department in accordance with agreed standards, which may in some details diverge from the usual ICPSR or GESIS archive standards. In addition and as long as reasonable it was adhered to standards once established for the Eurobarometer series in the course of the years.

### 3.1 Dataset structure

In general the variable structure of the analysis dataset is aligned to the basic bilingual questionnaire, preceded by a set of technical variables. These comprise the archive identification variables (archive study and version id), the survey identification variables (wave and unique respondent id), and several standard NATION variables identifying the different samples (countries or regions) and relevant groups of samples in the dataset with the corresponding WEIGHT variables provided by the fieldwork institutes (see 1.7). A special alphanumeric NATION variable is provided based on the ISO 3166 country code standard for the purpose of breaking down variables by sample in terms of clearly summarized cross-tabulations.

The questionnaire variables usually consist of three types, the substantial questions (Q), the Eurobarometer standard demographics (D) and the interview protocol variables (P). The dataset is concluded by constructed index variables (C), usually as provided by the fieldwork institute, by a questionnaire SPLIT variable if applicable, and by further original identification variables.

Variable names consist of the standard prefix 'V' and the consecutive variable number, except ISOCNTRY and VERSION variables if subsequently added to older datasets. Variable labels are standardized in the sense that they provide keywords based on the question text and that these keywords are applied consistently if questions or question items are repeated over time (trend variables). Variable label may include abbreviations if required, e.g. limitations regarding the length of variable labels in older versions of statistical analysis software. Starting with Eurobarometer 33 the variable labels include the respective question number as a reference to the basic bilingual questionnaire.

### 3.2 Coding frames

By general rule, the variables adopt the coding frame as specified in the basic bilingual questionnaire, except multiple response questions (see 1.8), questions with country specific answer categories and missing values.

#### 3.2.1 Country specific answer categories

Eurobarometer include some questions (variables) with country specific answer categories like INCOME, SIZE OF COMMUNITY, REGION or variables related to VOTING BEHAVIOUR with reference to POLITICAL PARTIES. Until Eurobarometer 48 only one integrated variable is supplied with each category representing country specific meanings (e.g. geographic regions) which are not documented within the analysis dataset by means of value labels, but only in the extended variable description in the variable report. Starting with Eurobarometer 49 the integrated variables are retained but complemented by completely labeled country specific variables. The country specific coding schemes and categories are maintained as a standard over time as long as the category schemes

provided in the questionnaire are remain comparable.

Special attention is given to the coding of POLITICAL PARTIES in voting behavior variables such as VOTE INTENTION or LAST VOTE based on a standard coding scheme, originally developed for the Eurobarometer by Ronald Inglehart.

Starting with Euro-Barometer 2 the coding of this variable has been standardized following an approximate ordering of each country's political parties along a "left" to "right" continuum in the first digit of the codes. Parties coded 01-39 are generally considered on the "left", those coded 40-49 in the "centre", and those coded 60-89 on the "right" of the political spectrum. Parties coded 50-59 cannot be readily located in the traditional meaning of "left" and "right". The second digit of the codes is not significant to the "left-right" ordering. Codes 90-99 contain the response "other party" and various missing data responses. Major "party families" like the Social Democrats or Conservatives have been assigned identical values across countries, if possible.

From Eurobarometer 69.2 onwards, the "party family" harmonization approach has been sharpened following and updating the coding scheme developed by ZEUS for the Mannheim Eurobarometer Trend File. This ZEUS Code of Party Families is country specific, i.e. the categories have different meanings for different countries. It has three digits: The first represents the party family, the second and third identify an individual party in this family. Individual parties are coded consistently over time. The assignment of parties to families is done according to their overall ideological orientations.

Table 6: ZEUS Party Family Code (slightly modified)

Category		Party Family
0	(001-099)	not affiliated / electoral alliances across "families"
1	(100-199)	Communists
2	(200-299)	Socialists
3	(300-399)	Liberals
4	(400-499)	Christian Democrats
5	(500-599)	Conservatives
6	(600-699)	Extreme Rights / Nationalists
7	(700-799)	Regionalists / Ethnic
8	(800-899)	Environmental parties
9	(900-949)	Agricultural parties
9	(950-989)	other special issue parties (e.g. Eurosceptics) and independents
	990	other (spontaneous)
	994	not voting age
	995	empty ballot (blank) or invalid vote
	996	not voted / would not vote
	997	Refused
	998	DK / DK+NA if NA not coded separately
	999	INAP (inappropriate)

If available, the former standard category used up to Eurobarometer 61 is always referenced in the variable description. Due to general changes in party systems and to the ideological development of individual political

parties, the assignment of parties to party families cannot claim general validity. Users may modify these codings or part of these codings in order to suit their specific needs.

### 3.2.2 Missing values

In general missing value codes are defined in accordance with the standard once established for the Eurobarometer series, in particular the default use of whatever value supplied by the basic questionnaire for DK ("don't know") responses, unless a standard coding scheme is applied for demographic or protocol variables. The value 0 is applied for NA (i.e. "not ascertained" resp. "no answer") and the value 9 (99, 999, ...) for INAP (i.e. "inappropriate" resp. "not applicable"). If one of these values falls into the valid range of codes, the missing values are shifted to the next available missing value code or "level", e.g. if 0 is used in a dichotomous variable (NOT MENTIONED), value 9 is used for NA, respectively value 8 if value 9 is already used for INAP. If necessary the corresponding two- or more digit codes are used (99, 999, 98, 998 ...). Recently separate missing values are coded for INAP depending on whether the respondent was not asked a question due to questionnaire routing (filter non-response) or whether the question was not provided for in the country's field questionnaire. Other missing values (e.g. REFUSAL) are coded with the in each case next available code (e.g. 7, 97, 997, ...). In the analysis data set these codes are by default declared and treated as USER MISSING, but may be modified by the user to suit specific needs.

## 3.3 International documentation standard

The variable documentation is set up in accordance with the international metadata specifications for the social and behavioural sciences, established by the Data Documentation Initiative <DDI>. The variable reports are based on the XML representation of DDI version 2. The documentation combines the exact wording and sequence of question components (question text, interviewer instruction, response categories, etc.) from the basic bilingual (master) questionnaire with the variable description (variable name, values, and labels) of the analysis dataset. General remarks and comments referring to a certain variable are defined as variable notes. Notes can be references to trend (comparability) information, standards applied for coding frames, problems in questionnaire translation, but also references to data problems or other specific characteristics.

## 4 Explanation of the variable documentation

---

The variable documentation part describes each variable in the analysis data file in terms of relevant metadata and frequency distributions. The variable documentation is set up by means of the GESIS Dataset Documentation Manager (DSDM) and in accordance with international metadata standards (DDI-Codebook/XML).

In general, the following abbreviations are used to indicate countries or (sub-national) areas. As far as applicable, the ISO 3166-1 alpha-2 country codes have been applied and coded accordingly in the alphanumeric sample identification variable (NATION – ALL SAMPLES ISO 3166).

AT	Austria	HR	Croatia
BE	Belgium	HU	Hungary
BG	Bulgaria	IE	Ireland
CY	Cyprus	IT	Italy
CY-TCC	Turkish Cypriote Community	LT	Lithuania
CZ	Czech Republic	LU	Luxembourg
DE	Germany (–1989)	LV	Latvia
DE-W	Germany West (1990 ff.)	MK	Macedonia (FYROM)
DE-E	Germany East (1990 ff.)	MT	Malta
EE	Estonia	NL	The Netherlands
ES	Spain	PL	Poland
FI	Finland	PT	Portugal
FR	France	RO	Romania
GB	United Kingdom	SE	Sweden
GB-GBN	Great Britain	SI	Slovenia
GB-NIR	Northern Ireland	SK	Slovakia
GR	Greece	TR	Turkey

The example explained below reproduces the information appearing in the variable documentation part for a typical substantive variable. Results are usually broken down by country (sample) or represented by frequency counts in the case of country specific variables. In the case of variables with long lists of coded "real" values (e.g. age), results are only presented for the corresponding categorized variable, if available. The content and construction of technical, administrative or other generated variables is described as appropriate.

The frequencies for substantive variables are calculated on the base of weighted data, as indicated with each table and in accordance with the European Commission's official Eurobarometer reports. Typically the sample specific post-stratification (redressment) weight is applied (WEIGHT RESULT FROM TARGET or NATION WEIGHT II). Due to rounding, users may find slightly different figures if using other statistical packages, especially if the number of cases is very low.

The complete question and answer texts are taken from the English language part of the respective basic bilingual questionnaire (master questionnaire) as provided by the coordinating fieldwork institute.

Note: Last trend: EB ... , Q. ...																																																																																																																																																																																																																																																																																																																					
QUESTION NUMBER and full QUESTION TEXT from the basic questionnaire, including interviewer instructions. The numbers or letters that may appear together with the original question number, reflect the item order (multiple item or multiple response questions) or indicate if a question was recoded (R) or summarized (T), or if asked only in a single country (country abbreviation).																																																																																																																																																																																																																																																																																																																						
CODE VALUES occurring in the data for this variable and complete ANSWER TEXT from the basic questionnaire. Code values may differ from the questionnaire specification due to standardization. Abbreviations commonly used in the code definitions are DK (don't know), NA (not ascertained) and INAP (inappropriate).																																																																																																																																																																																																																																																																																																																						
DERIVATION information refers to the construction principle of indices or other derived variables (not in the example). NOTE delineates additional explanatory text subsuming trend information (last appearance of the question) or archive remarks on data processing and other issues relevant for the understanding or application of the variable.																																																																																																																																																																																																																																																																																																																						
CROSS-TABULATION: The absolute frequencies of the occurrence of values ( <i>absolute values</i> ) refer to the number of cases in the weighted dataset as indicated, in this case <i>weighted by V8</i> . The relative frequencies ( <i>row percent</i> ) refer to the valid cases ( <i>n valid sum</i> ), i.e. the total number of cases ( <i>n sum</i> ) reduced by the number of cases defined as missing data ( <i>M</i> ). For display and place saving reasons excluded countries or areas may be completely dropped from the table.																																																																																																																																																																																																																																																																																																																						
FREQUENCY COUNTS: For country specific variables relative frequencies are calculated in- and excluding missing data ( <i>M</i> ), i.e. <i>percent</i> on the basis of all cases ( <i>sum</i> ) and <i>valid percent</i> on the basis of the <i>valid cases</i> .																																																																																																																																																																																																																																																																																																																						
Absolute Values (Row Percent), weighted by v8

## 5 Variable Documentation

**Variable, Label**

**Question Text (English Language)**

v1 - ZA/ICPSR STUDY NUMBER

ARCHIVE STUDY NUMBER

v1

Value	Label	Missing	Count	Percent	Valid Percent
992			8826	100.0	100.0
	Sum		8826	100.0	100.0
	Valid Cases		8826		

v2 - ICPSR EDITION NUMBER

ICPSR EDITION NUMBER

THIS VARIABLE IDENTIFIES THE RELEASE VERSION OF THIS DATASET.

1 SPRING, 1980

Note:

Please see variable VERSION ("GESIS ARCHIVE VERSION") for further information on the version number of this data set and the corresponding release date.

v2

Value	Label	Missing	Count	Percent	Valid Percent
1			8826	100.0	100.0
	Sum		8826	100.0	100.0
	Valid Cases		8826		

version - GESIS ARCHIVE VERSION

VERSION AND RELEASE DATE OF THE ARCHIVE DATA SET

This variable identifies the GESIS archive version number of this data set and the corresponding release date, recorded as an alphanumeric string. The version number is composed of a sequence of three numbers. The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases), the minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels), and the third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

On occasion of the implementation of this versioning scheme (2010-04-13), the default version number 1.0.0 has been created automatically for this Eurobarometer.

Version 1.0.1 adds the crosstabulation variable ISOCNTRY and the VERSION variable to the otherwise unchanged data set. Former version or edition identification variables are maintained unchanged as a reference to former releases.

version

Value	Label	Missing	Count	Percent	Valid Percent
1.0.1 (2012-07-01)			8826	100.0	100.0
	Sum		8826	100.0	100.0
	Valid Cases		8826		

v3 - EUROBAROMETER NO

ICPSR PART NUMBER

THIS VARIABLE IDENTIFIES THE PART NUMBER OF THIS DATASET.

1 PART 1

v3

Value	Label	Missing	Count	Percent	Valid Percent
80			8826	100.0	100.0
	Sum		8826	100.0	100.0
	Valid Cases		8826		

v4 - RESPONDENT ID

RESPONDENT IDENTIFICATION NUMBER

THIS NUMBER UNIQUELY IDENTIFIES EACH CASE. THE FIRST TWO DIGITS OF THE IDENTIFICATION NUMBER ARE THE NATION CODES (SEE VARIABLE 8). THE LAST FOUR DIGITS OF THIS VARIABLE REPRESENT A UNIQUE CASE IDENTIFICATION NUMBER WITHIN EACH NATION.

v5 - EUROPEAN WEIGHT

EUROPEAN WEIGHT VARIABLE:

THIS WEIGHT CREATES A TOTAL SAMPLE IN WHICH THE NATIONAL SAMPLES ARE PROPORTIONATE TO THEIR SIZE IN THE EUROPEAN POPULATION.

v6 - WEIGHT FRANCE

FRENCH WEIGHT VARIABLE:

THIS WEIGHT IS NECESSARY TO MAINTAIN THE REPRESENTATIVENESS OF THE FRENCH SAMPLE.

v7 - WEIGHT UNITED KINGDOM

UNITED KINGDOM WEIGHT VARIABLE:

THIS WEIGHT ALLOWS USE OF THE BRITISH AND NORTHERN IRISH SAMPLES AS ONE UNIT TO REPRESENT THE UNITED KINGDOM.

isocntry - NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)

NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)

All surveyed countries and regions, i.e. including separate samples for East- / West-Germany, Great Britain / Northern Ireland, and the Turkish Cypriot Community (TCC), are coded in accordance with the ISO 3166-1-alpha-2 country code, if available. ISO 3166-2 is applied for the United Kingdom subdivisions. ISO standard codes are not available for the "historical" East / West subdivision of Germany (DE-E / DE-W) and for the Turkish Cypriot Community in northern Cyprus (CY-TCC), the internationally not recognized "Turkish Republic of Northern Cyprus".

## v10 - LIVING CONDITIONS - NEXT 5 YEARS

Q.113

DO YOU THINK THAT YOUR EVERYDAY CONDITIONS WILL IMPROVE OVER THE NEXT 5 YEARS OR NOT? A LOT OR A LITTLE?

- 0 DK; NA
- 1 YES, WILL IMPROVE A LOT
- 2 YES, WILL IMPROVE A LITTLE
- 3 UNDECIDED, WILL STAY THE SAME (VOLUNTEERED BY RESPONDENT)
- 4 WILL GET A LITTLE WORSE
- 5 WILL GET A LOT WORSE

## v11 - VALUE ORIENTATION - POL GOALS 1ST

IN THE NETHERLANDS, GERMANY, ITALY THE LAST TWO SENTENCES ARE REPLACED BY: WHICH OF THE GOALS ON THIS CARD WOULD YOU SAY IS THE MOST IMPORTANT?

Q.114

THERE IS A LOT OF TALK THESE DAYS ABOUT WHAT THE AIMS OF (COUNTRY) SHOULD BE FOR THE NEXT TEN YEARS.

(INTERVIEWER: SHOW RESPONDENT CARD A.)

ON THIS CARD ARE LISTED SOME OF THE GOALS TO WHICH DIFFERENT PEOPLE WOULD GIVE TOP PRIORITY. WOULD YOU PLEASE SAY WHICH OF THESE YOU YOURSELF CONSIDER THE MOST IMPORTANT?

0 DK; NA

1 MAINTENANCE OF LAW AND ORDER

2 GIVING PEOPLE MORE SAY IN GOVERNMENT DECISIONS

3 FIGHTING RISING PRICES

4 PROTECTING FREEDOM OF EXPRESSION (BELGIUM AND LUXEMBOURG:...SO THAT EVERYONE CAN SAY WHAT THEY THINK)

## v14 - SOCIAL CHANGE - ATTIT TOW SOCIETY

Q.117

(SHOW RESPONDENT CARD B.)

ON THIS CARD ARE THREE BASIC KINDS OF ATTITUDES VIS-A-VIS THE SOCIETY WE LIVE IN. PLEASE CHOOSE THE ONE WHICH BEST DESCRIBES YOUR OWN OPINION.

0 DK; NA

1 THE ENTIRE WAY OUR SOCIETY IS ORGANIZED MUST BE RADICALLY CHANGED BY REVOLUTIONARY ACTION

2 OUR SOCIETY MUST BE GRADUALLY IMPROVED BY REFORMS

3 OUR PRESENT SOCIETY MUST BE VALIANTLY DEFENDED AGAINST ALL SUBVERSIVE FORCES

## v67 - HOUSEWORK - OPINION ABOUT

Q.171

EVERYONE HAS AN OPINION ABOUT HOUSEWORK. HERE I AM NOT TALKING ABOUT LOOKING AFTER THE CHILDREN, BUT DOING THE NECESSARY THINGS ABOUT THE HOME - COOKING, CLEANING, SHOPPING, NEEDLEWORK, ETC. FOR SOME PEOPLE HOUSEWORK IS ONLY A NECESSARY BURDEN. FOR OTHERS IT IS RATHER A WORK THAT A PERSON CAN ENJOY. WITH WHICH OF THESE TWO OPINIONS DO YOU PERSONALLY AGREE?

0 DK; NA

1 ONLY A NECESSARY BURDEN

2 IT DEPENDS (INTERVIEWER: DO NOT SUGGEST)

3 A PERSON CAN ENJOY IT

Note:

"IT DEPENDS" (CODE 2) WAS NOT CODED FOR IRELAND, GREAT BRITAIN, OR NORTHERN IRELAND.

## v68 - MARITAL STATUS - MARRIED

Q.172

ARE YOU MARRIED OR LIVING AS MARRIED?

0 NO

1 YES

Note:

VARIABLE 68 (AN INTERVIEWER CHECKPOINT TO ASCERTAIN RESPONDENT'S MARITAL STATUS) AND VARIABLE 123 (A SEPARATE AND MORE DETAILED CODING OF MARITAL STATUS) ARE NOT COMPLETELY CONSISTENT WITH ONE ANOTHER IN THE CATEGORIES SINGLE VS. MARRIED. SOME CASES HAVE BEEN RECODED ON THE BASIS OF INFORMATION GIVEN IN VARIABLES 34, 61, AND 69, WHICH WERE ASKED OF MARRIED RESPONDENTS. IN BELGIUM, DISCREPANCIES MAY BE RELATED TO THE FACT THAT THE CODE CATEGORY "LIVING AS MARRIED" WAS NOT ASKED. IN OTHER INSTANCES HOWEVER, IT WAS DECIDED THAT THERE WAS NO COMPLETELY SATISFACTORY RESOLUTION OF THE REMAINING INCONSISTENCIES. SO AS TO ALLOW ANALYSTS MAXIMUM FLEXIBILITY, THE REMAINING INCONSISTENT RESPONSES HAVE NOT BEEN CODED AS MISSING DATA.

## v123 - MARITAL STATUS

Q.260

ARE YOU:

- 0 NA
- 1 SINGLE
- 2 MARRIED
- 3 LIVING AS MARRIED (ALTERNATIVE NOT GIVEN IN BELGIUM, LUXEMBOURG)
- 4 DIVORCED
- 5 SEPARATED
- 6 WIDOWED

Note:

VARIABLE 68 (AN INTERVIEWER CHECKPOINT TO ASCERTAIN RESPONDENT'S MARITAL STATUS) AND VARIABLE 123 (A SEPARATE AND MORE DETAILED CODING OF MARITAL STATUS) ARE NOT COMPLETELY CONSISTENT WITH ONE ANOTHER IN THE CATEGORIES SINGLE VS. MARRIED. SOME CASES HAVE BEEN RECODED ON THE BASIS OF INFORMATION GIVEN IN VARIABLES 34, 61, AND 69, WHICH WERE ASKED OF MARRIED RESPONDENTS. IN BELGIUM, DISCREPANCIES MAY BE RELATED TO THE FACT THAT THE CODE CATEGORY "LIVING AS MARRIED" WAS NOT ASKED. IN OTHER INSTANCES HOWEVER, IT WAS DECIDED THAT THERE WAS NO COMPLETELY SATISFACTORY RESOLUTION OF THE REMAINING INCONSISTENCIES. SO AS TO ALLOW ANALYSTS MAXIMUM FLEXIBILITY, THE REMAINING INCONSISTENT RESPONSES HAVE NOT BEEN CODED AS MISSING DATA.

v132 - INCOME

Q.272

WE WOULD LIKE TO ANALYSE THE SURVEY RESULTS ACCORDING TO THE INCOME OF PERSONS INTERVIEWED.

(SHOW RESPONDENT INCOME CARD.)

HERE IS A SCALE OF INCOMES AND WE WOULD LIKE TO KNOW IN WHAT GROUP YOUR FAMILY IS, COUNTING ALL WAGES, SALARIES, PENSIONS (BRITAIN: PERSONS) AND ANY OTHER INCOME THAT COMES IN. JUST GIVE ME THE NUMBER OF THE GROUP YOUR HOUSEHOLD FALLS INTO BEFORE TAX AND OTHER DEDUCTIONS.

- 8 320-399 POUNDS
- 9 400-479 POUNDS
- 10 480-599 POUNDS
- 11 600 POUNDS AND OVER

in Northern Ireland (GB\_NIR):

- 0 DK; NA
- 1 UNDER 40 POUNDS
- 2 40-79 POUNDS
- 3 80-119 POUNDS

- 4 120-159 POUNDS
- 5 160-199 POUNDS
- 6 200-239 POUNDS
- 7 240-319 POUNDS
- 8 320-399 POUNDS
- 9 400-479 POUNDS
- 10 480-599 POUNDS
- 11 600 POUNDS AND OVER

## Note:

IN DENMARK, THE QUESTION IS SIMPLY "TOTAL HOUSEHOLD INCOME." IN FRANCE AND ITALY, INCOME "BEFORE TAXES AND OTHER DEDUCTIONS" IS NOT ASKED FOR.

## v140 - VALUE ORIENTATION - POST-MAT INDEX

## MATERIALIST/POST-MATERIALIST VALUES INDEX

- 0 NA; INAP.
- 1 MATERIALIST
- 2 MIXED
- 3 POST-MATERIALIST

## Derivation:

THIS INDEX WAS CONSTRUCTED FROM RESPONSES GIVEN TO Q.114 AND Q.115.

CODE 1: CODED 1 OR 3 IN BOTH Q.114 AND Q.115

CODE 2: CODED 1 OR 3 IN Q.114 AND 2 OR 4 IN Q.115 OR 2 OR 4 IN Q.114 AND 1 OR 3 IN Q.115

CODE 3: CODED 2 OR 4 IN BOTH Q.114 AND Q.115

CODE 0: CODED 0 IN Q.114 OR 0 IN Q.115

## Note:

FOR A COMPLETE DISCUSSION OF THIS VARIABLE, SEE RONALD INGLEHART, THE SILENT REVOLUTION: CHANGING VALUES AND POLITICAL STYLES AMONG WESTERN PUBLICS, (PRINCETON: PRINCETON UNIVERSITY PRESS, 1977), CHAPTER 11.

## v141 - LEFT-RIGHT VOTE INTENTION SUMMARY

## LEFT-RIGHT PARTISAN VOTE SUMMARY

- 0 DK; NA
- 1 LEFT PARTY
- 2 CENTER, OTHER
- 3 RIGHT PARTY

## Derivation:

THIS VARIABLE RECODES PARTISAN PREFERENCE (Q.262) ACCORDING TO WHETHER RESPONDENTS SUPPORT A LEFTIST OR RIGHTIST PARTY. THE IDENTIFICATION OF PARTY "TENDANCE" IS INCORPORATED INTO THE ORIGINAL VARIABLES. PARTIES CODED FROM 5 TO 39 ARE DESIGNATED AS "LEFT"; PARTIES CODED FROM 40 TO 59 ARE CODED "CENTER"; AND PARTIES CODED FROM 60 TO 89 ARE CODED "RIGHT". "OTHER PARTIES," CODED 90, ARE ALSO PUT IN THE CENTER. THE IDENTIFICATION OF LEFT/RIGHT PARTIES HAS BEEN PROPOSED BY THE PRINCIPAL INVESTIGATORS. OTHER ANALYSTS MAY WISH TO ALTER THIS CLASSIFICATION TO CONFORM MORE CLOSELY TO THEIR OWN RESEARCH INTERESTS.

## v142 - LEFT RIGHT SECOND PARTY SUMMARY

## LEFT-RIGHT PARTISAN VOTE SUMMARY-SECOND PARTY

- 0 DK; NA
- 1 LEFT
- 2 CENTER, OTHER
- 3 RIGHT

## Derivation:

THIS VARIABLE RECODES THE SECOND MENTIONED PARTISAN PREFERENCE (Q.264) ACCORDING TO WHETHER RESPONDENTS SUPPORT A LEFTIST OR RIGHTIST PARTY. THE IDENTIFICATION OF PARTY "TENDANCE" IS INCORPORATED INTO THE ORIGINAL VARIABLES. PARTIES CODED FROM 5 TO 39 ARE DESIGNATED AS "LEFT"; PARTIES CODED FROM 40 TO 59 ARE CODED "CENTER"; AND PARTIES CODED FROM 60 TO 89 ARE CODED "RIGHT". "OTHER PARTIES," CODED 90, ARE ALSO PUT IN THE CENTER. THE IDENTIFICATION OF LEFT/RIGHT PARTIES HAS BEEN PROPOSED BY THE PRINCIPAL INVESTIGATORS. OTHER ANALYSTS MAY WISH TO ALTER THIS CLASSIFICATION TO CONFORM MORE CLOSELY TO THEIR OWN RESEARCH INTERESTS.

## v143 - COGNITIVE MOBILIZATION INDEX

## COGNITIVE MOBILIZATION INDEX

- 1 LOW COGNITIVE MOBILIZATION
- 2 MEDIUM - LOW COGNITIVE MOBILIZATION
- 3 MEDIUM - HIGH COGNITIVE MOBILIZATION
- 4 HIGH COGNITIVE MOBILIZATION

## Derivation:

THIS VARIABLE COMBINES RESPONSES TO Q.175 AND Q.133 TO FORM AN INDICATOR OF AN INDIVIDUAL'S POTENTIAL TO TAKE AN ACTIVE ROLE IN THE POLITICAL PROCESS.

CODE 1: CODED 3, 4 OR 0 IN Q.175 AND CODED 3 OR 0 IN Q.133

CODE 2: CODED 3, 4 OR 0 IN Q.175 AND CODED 2 IN Q.133; OR CODED 1 OR 2 IN 604 Q.175 AND CODED 3 OR 0 IN Q.133

CODE 3: CODED 3, 4 OR 0 IN Q.175 AND CODED 1 IN Q.133; OR CODED 1 OR 2 IN Q.175 AND CODED 2 IN Q.133

CODE 4: CODED 1 OR 2 IN Q.175 AND CODED 1 IN Q.133

## Note:

FOR A COMPLETE DISCUSSION OF THIS VARIABLE AND ITS CORRELATES, SEE RONALD INGLEHART, THE SILENT REVOLUTION: CHANGING VALUES AND POLITICAL STYLES AMONG WESTERN PUBLICS, (PRINCETON: PRINCETON UNIVERSITY PRESS, 1977), CHAPTER 11. THIS VARIABLE IS LABELED THE OPINION LEADERSHIP INDEX IN THE CODEBOOKS FOR BAROMETERS 3, 4, 5 AND 6.
