Demographic Variables in ALLBUS/GGSScompact 2012

About this Supplement to ALLBUS/GGSScompact 2012

This document contains frequency tables by sex of respondent for the data of ALLBUS/GGSScompact 2012. The data in these tables is weighted by v743 (person-related East-West weight). This weight adjusts for the oversample of respondents in the new federal states. Therefore, the numbers in the sum-columns are directly interpretable for Germany as a whole.

For more information on weighting ALLBUS/GGSS data, please refer to:

Terwey, Michael (2014):

Oversamples, Units of Analysis, and the Topic of Data Transformation. In: Terwey, Michael; Baumann, Horst (eds.): Variable Report ALLBUS / German General Social Survey Cumulation 1980-2012. Study No. 4580. GESIS - Variable Reports, No. 2014|9, Köln: GESIS, p. x-xvii.

Notes on ALLBUS/GGSScompact 2012 (Study No. 4617)

As an alternative to ALLBUS/GGSS 2012 with its relatively complex demography module, GESIS also offers an additional compact version with a reduced number of demographic variables. By providing an easily manageable selection of basic demographic descriptors, this ALLBUS/GGSScompact addresses, amongst others, the needs of newcomers to data analysis. Moreover, access conditions for ALLBUS/GGSScompact are less strict than for the more extensive ALLBUS/GGSS data, because data protection issues are less salient.

However, for reasons of data protection some of the remaining demographic data still had to be simplified. A comprehensive account of recodes can be found in the next section of this document.

Apart from demography, all other questions have been retained in full in the compact version. Moreover, variable labels and variable numbers in ALLBUS/GGSScompact are the same as in the unabridged ALLBUS/GGSS data set. In this way, users may easily move between both versions of the ALLBUS/GGSS data if necessary.

Note for Publications Using ALLBUS/GGSS Data

Usage and analysis of research data as well as any publication of research results based on such data should be connected with information on the data generator, the data source and an identification of the dataset. GESIS Data Archive for the Social Sciences therefore suggests the following minimum standard for the scientific citation of its data sets. Example for release 1.0.0:

The known literature using ALLBUS-Data is documented in the ALLBUS-Bibliography. This bibliography can be searched online at the [GESIS web presence](#).

Example Data Illustration:

ALLBUS/GGSS 2012: "Generally speaking, how much do you support the building of Mosques here in Germany, do you completely support it, tend to support it, tend not to support it, or do not support it at all?" (V187) tabulated by region of interview (V8); own calculations (West Germany includes West Berlin).

Further Notes:

Respondents from the area of the new federal states are oversampled.

Due to a delay in processing, occupational classifications and prestige scores for ALLBUS 2012 could not be included in the regular data set (ZA4614). These variables were published in a supplementary data set (ZA4618) that can be merged with the regular data set. For the English data set, the data from ZA4618 could be included into the regular scientific use file. Thus, there is no need to merge the occupational data.

The complete version of this data set is available as ALLBUS 2012 (ZA4614: German version (752 variables); ZA4616: English version including ZA4618 (795 variables)).

A Digital Object Identifier (DOI) for use in data citations is part of the English data set. A DOI for the German data set can be found in the GESIS Data Catalogue:
