

European *Values* Study

EVS 2017 – Variable Report

Appendix B1: Mapping of income deciles into income terciles

European Values Study (EVS)

Acknowledgement

This work was undertaken under supervision of the EVS Methodology Group (Ruud Luijkx, Alice Ramos, Bart Meuleman, Ivan Rimac, Frédéric Gonthier, Markus Quandt, Michael Braun, Dominique Joye).

The fieldwork of the 2017 European Values Study (EVS) was financially supported by universities and research institutes, national science foundations, charitable trusts and foundations, companies, and church organizations in the EVS member countries.

The project would not have been possible without the National Program Directors in the EVS member countries and their local teams.

Special thanks also go to the following members of the EVS teams at Tilburg University and GESIS-DAS for their contribution in preparing and distributing this document:

Laura Babonetti (EVS, Tilburg), Giovanni Borghesan (EVS, Tilburg), Evelyn Brislinger (GESIS-DAS), Claudia Brunori (EVS, Tilburg), Yasemin Celik (EVS, Tilburg), Viktor Decker (GESIS-DAS), Margarita Gutjar (GESIS-DAS), Andrea Kuczora (GESIS-DAS), Lucilla Losi (EVS, Tilburg), Angelica Maineri (EVS, Tilburg), Sandra Michaelis (GESIS-DAS), Elisa Mori (EVS, Tilburg), Chiara De Siena (EVS, Tilburg), and Ivet Solanes (GESIS-DAS). In addition, we would like to thank Kerstin Beck for helping to finalise and publish the documentation on the EVS 2017 data.

Appendix B1: Mapping of income deciles into income terciles - EVS 2017

Source variable: households total net income, standardized (Q98) **v261**

New variable: income three categories **v261_r**

This document outlines the procedure used to create the reduced version of the EVS income variable in three categories (v261_r) and presents the mapping for each EVS17 country.

Because of consistency with previous waves and the imbalanced distribution of deciles in many countries, the original deciles are aggregated into terciles on a country-by-country basis. This means that respondents are aggregated into three categories of income, each containing *around* 33% of the respondents. This is not a strict rule, as the aggregation is computed manually and the percentages of respondents in each category can be slightly higher or lower than 33%. The aggregation is made so that the deviance from the target 33% is minimized.
