Version 1.1.0: Released on January 26, 2021.

The following corrections have been introduced:

1. Variable "gwght": The Calibration weights were erroneously set as 1 for all cases of the German sample in the EVS part of the Joint EVS/WVS version 1.0.0. Correct weights have been included into version 1.1.0.
2. Variables "F063. Importance of God" and "F114A. Justifiable: Claiming government benefits to which you are not entitled": due to the error in the survey software, initial answer distributions to these questions contained errors in the USA national data-set in the WVS part of the Joint EVS/WVS file. As a part of the correction procedure, the full questionnaire script and answer distributions to all questions have been checked. Apart from the specified above variable, few more further questions have been mildly affected.
3. Variable "X007.Marital status": further cases on "2=Living together as married" have been incorporated in the national dataset for Germany in the WVS part of the Joint EVS/WVS file.
