### ISCO08 - Occupation ISCO 2008

Please give the text of the source question(s) on the respondent's occupation used in your field questionnaire. If ISCO08-codes are not coded directly from the responses, but derived from a country-specific occupation coding scheme, please provide a table of correspondence between country-specific and ISCO08 codes *attached as a separate file*. Also when you derive ISCO08 from another ISCO scheme, such as ISCO88, ISCO-COM (a variant developed for the European Union (EU)), or ISCO88-CIS developed by the Statistical Committee of the Commonwealth of Independent States, please document the source code and provide a correspondence list.

Please do **not** enter **standard** ISCO08 codes here, but report any deviations. **However, please note that country-specific codes, which are not part of the ISCO coding scheme cannot be accepted!**

Occupations should be coded on the 4-digit level of ISCO08. Occupational area 0 (Armed Forces occupations) needs some special attention. Since the ISCO variable is numeric, 4-digit codes starting with zero, such as 0110 will usually appear as 110 in the data file. It is therefore suggested that the only valid 3-digit codes in the data file are those armed forces occupations 110, 210 and 310.

In some special cases information concerning the occupation may be insufficient for 4-digit coding. Instead of coding these cases as [-8] "inadequately described" use 3-digit coding. In those very special cases where 3-digit coding is applied, fill in a zero for the missing digit. Example: code 131 is coded as 1310.

	National Language	English Translation
<i>Question no. and text</i>	<p>B12 Uved'te názov vášho hlavného zamestnania. Zároveň ho čo najpodrobnejšie opíšte: aká je náplň Vašej práce, čo máte na starosti, atď. ### SPISCO08 – Spouse, partner: occupation ISCO 2008

Please give the text of the source question(s) on the respondent's spouse occupation used in your field questionnaire. If ISCO08-codes are not coded directly from the responses, but derived from a country-specific occupation coding scheme, please provide a table of correspondence between country-specific and ISCO08 codes *attached as a separate file*. Also when you derive ISCO08 from another ISCO scheme, such as ISCO88, ISCO-COM (a variant developed for the European Union (EU)), or ISCO88-CIS developed by the Statistical Committee of the Commonwealth of Independent States, please document the source code and provide a correspondence list.

Please do **not** enter **standard** ISCO08 codes here, but report any deviations. **However, please note that country-specific codes, which are not part of the ISCO coding scheme cannot be accepted!**

Occupations should be coded on the 4-digit level of ISCO08. Occupational area 0 (Armed Forces occupations) needs some special attention. Since the ISCO variable is numeric, 4-digit codes starting with zero, such as 0110 will usually appear as 110 in the data file. It is therefore suggested that the only valid 3-digit codes in the data file are those armed forces occupations 110, 210 and 310.

In some special cases information concerning the occupation may be insufficient for 4-digit coding. Instead of coding these cases as [-8] "inadequately described" use 3-digit coding. In those very special cases where 3-digit coding is applied, fill in a zero for the missing digit. Example: code 131 is coded as 1310.

	National Language	English Translation
<i>Question no. and text</i>	<p>B19 Uvedte názov hlavného zamestnania Vášho manžela(ky)/ partnera(ky). Popíšte ho čo najpodrobnejšie: aká je / bola náplň jeho/jej práce, čo má na starosti, atď. (Nestačí „robotník“, prosíme o bližšie určenie, napr. robotník pri páse vo výrobe motorov.) Použite dve aj viacero slov, nepoužívajte skratky.</p> <p><i>Ak je / bol-a podnikateľ-ka alebo živnostník-čka, uveďte, v akej oblasti podniká / podnikal-a a aká je / bola náplň jeho / jej práce?</i></p>	<p>Please, write the name of the main occupation of your spouse / partner. Include detailed description of his/hers working activity: what is his/hers principal activity, responsibility etc (Stating "worker" is not sufficient, please, specify; e.g. engine assembly line production worker). Use two or more words, exclude abbreviations.</p> <p><i>If he/she is / was self-employed or entrepreneur, please, specify the area of his/hers business.</i></p>

**WEIGHT – Weighting factor**

Please report on whether you calculate any weighting variables. If you adjust for non-response bias, please enter the variable(s) on which the sample's distribution(s) is (are) adjusted to the population distribution(s). Please, also report if you apply any kind of rescaling.

<i>Design weight to adjust for unequal selection probabilities</i>	No <input type="checkbox"/> [ ] Yes <input checked="" type="checkbox"/> [ X ]
<i>Weight to adjust for non-response bias</i>	No <input type="checkbox"/> [ ] Yes <input checked="" type="checkbox"/> [ X ] → please specify variables used for calculation of weight <b>gender, age, education, region, size of municipality</b>
<i>Are the final weights rescaled to net sample size (thus weighted sample size=unweighted sample size)?</i>	No <input type="checkbox"/> [ ] → please specify target population represented by sum of all case weights Yes <input checked="" type="checkbox"/> [ X ]
<i>Note</i>	<p>Two types of scales were used in weighing the file - design and post-stratification.</p> <p>The design scales were based on the fact that the probability of an individual becoming to be a respondent is determined by the number of adults living in a given household (the probability of choosing a household is the same for all). The design weights were given by the number of adults living in a given household (if only one person lives the weight was set equal to 1 <math>w_{diz_i}=1</math>, if two - the weight was set to 2 <math>w_{diz_i}=2, \dots</math>). The weights used in this way take on a wide range of 1 - 8, which causes imbalance in the information obtained, so they were normalized so that their mean value was 1: <math>w'_{diz_i} = w_{diz_i} / \text{mean}(w_{diz_i})</math>.</p> <p>With the design weights turned on in this way, post-stratification weights were further determined so that the characteristics of the population correspond to the population structure of the Slovak Republic as of 31.12.2020 according to the Slovak Statistical Office.</p> <p>The weighting algorithm used is based on the chi-square method so that the chi-square test values are as small as possible for the selected classes. The selected characteristics - gender, age, education, region, VMB were selected as weighting variables.</p> <p>The weights could theoretically take on arbitrary non-negative values. However, this would run the risk of greatly increasing the statistical error of the responses and would be highly problematic from a sociological point of view. It is therefore necessary to impose certain restrictions on the</p>

	<p>values of the weights. Given the number of weighting variables, the limits for the post-stratification weights were set between 0.2 and 5.0.</p> <p>In the actual calculation of the post-stratification weights, a modification of Deming's Stephan's iterative algorithm (cf. Jan Neustadt. surveys, thesis MFF UK Prague, 1997). For any weighted variable, we cannot reject the hypothesis of agreement between theoretical and empirical weights.</p> <p>From the design and post-stratification weights thus computed, final weights were computed (by multiplication), which were bounded by values between 0.3 and 3.0, as is customary in practice. In this way, 2.7% of cases with weights less than 0.3 and 2.5% of cases with weights exceeding 3 were adjusted.</p>
