<p>This interview was conducted within the Code of Conduct of the Market Research Society. I would like to remind you that all your replies will be treated in the strictest confidence.</p>	
<p>For quality control reasons, we might need to re-contact you. Do you agree to give us your first name and phone number for this purpose? Your personal data, including your address, would be then carefully handled in compliance with the European General Data Protection Regulation (GDPR) and Kantar Privacy Policy, not shared with third parties and deleted at the completion of the quality controls.</p>

# Technical Specifications

Between 31 May 2023 and 25 June 2023, Kantar Public on behalf of Kantar Belgium carried out the wave 99.4 of the Eurobarometer survey, on request of the European Commission, Directorate-General for Communication, "Media monitoring and Eurobarometer" Unit.

The wave 99.4 includes the Standard Eurobarometer 99 survey and covers the population of the nationalities of the European Union Member States, resident in each of the 27 Member States and aged 15 years and over.

The Standard Eurobarometer 99 survey has also been conducted in 12 other countries or territories: seven candidate countries (Albania, Bosnia and Herzegovina, Moldova, Montenegro, North Macedonia, Serbia, Türkiye), the Turkish Cypriot Community in the part of the country that is not controlled by the government of the Republic of Cyprus, as well as in Kosovo<sup>27</sup>, Norway, Switzerland and in the United Kingdom.

In these countries and territories, the survey covers the national population of citizens and the population of citizens of all the European Union Member States that are residents in these countries and territories and have a sufficient command of the national languages to answer the questionnaire.

The basic sample design applied in all countries and territories is a stratified multi-stage, random (probability) one. In each country, the sample frame is first stratified by NUTS regions and within each region by a measure of urbanity (DEGURBA). The number of sample points selected in each strata reflects the stratum population 15+. At the second stage sampling points were drawn with probability proportional to their 0+ population size from within each stratum.

The samples thus represent the whole territory of the countries surveyed according to the EUROSTAT NUTS II (or equivalent) and according to the distribution of the resident population of the respective nationalities in terms of metropolitan, urban and rural areas<sup>28</sup>.

In each of the selected sampling points, a starting coordinate was drawn at random and a reverse geo-coding tool used to identify the closest address to the coordinate. This address was the starting address for the random walk. Further addresses (every Nth address) were selected by standard "random route" procedures, from the initial address. In each household, the respondent was drawn, at random. The approach to the random selection was conditional on the household size. By way of example for households with two 15+ members the script was used to select either the informant (person responding to the screener questionnaire) or the other eligible member in the household. For households with three 15+ members the script was used to select either the informant (1/3 of the time) or the two other eligible members in the household (2/3 of the time). Where the two other members were selected, the interviewer was then told to either ask for the youngest or oldest. The script would randomly assign the selection to youngest or oldest with equal probability. This process continues for four 15+ household members – randomly asking for the youngest, 2<sup>nd</sup> youngest and oldest. For households with five 15+ members we revert to the last birthday rule.

If no contact was made with anyone in the household, or if the respondent selected was not available (busy), the interviewer revisited the same household up to three additional times (four contact attempts in total). Interviewers never indicate that the survey is conducted on behalf of the European Commission beforehand; they may give this information once the survey is completed, upon request.

The recruitment phase was slightly different in the Netherlands, Finland, and Sweden. In these two latter countries, a sample of addresses within each sampling point were selected from the address or population register (in Finland, selection is not done in all sample points, but in some where response rates are expected to improve). The selection of addresses was done in a random manner. Households were then contacted by telephone and recruited to take part in the survey. In the Netherlands, a dual frame RDD sample (mobile and landline numbers) are used as there is no comprehensive population register with telephone numbers available. The selection of numbers on both frames is done in a random manner with each number getting an equal probability of selection. Unlike Sweden and Finland, the sample is un-clustered.

<sup>27</sup> This designation is without prejudice to positions on status, and is in line with UNSCR 1244/99 and the ICJ Opinion on the Kosovo declaration of independence.

<sup>28</sup> Urban Rural classification based on DEGURBA (<https://ec.europa.eu/eurostat/web/degree-of-urbanisation/background>)

## Standard Eurobarometer 99 Spring 2023

### Interviewing mode per country

Interviews were conducted through face-to-face interviews, either physically in people's homes or through remote video interaction in the appropriate national language. Interviews with remote video interaction ("online face-to-face" or CAVI, Computer Assisted Video Interviewing, were conducted in Czechia, Denmark, Finland and Malta.)

In Norway and Switzerland face-to-face interviews were not feasible at all. Therefore, all interviews were conducted online with Computer-Assisted Web Interviewing (CAWI) technique. In Norway, stratified random samples were drawn from among probability-based samples. Recruitments are done using offline modes of data collection (telephone and postal) based on a probability sample design. In Switzerland samples were randomly drawn from the non-probabilistic sample ("Demoscope"). Demoscope is a pseudo-probabilistic sample, in that the frame for selecting households is based on a probability sample. Recruitment is done via the telephone directory – which lists landline numbers only in Switzerland, where landline coverage is very high. However, the selection of individuals in the households to join the panel is not random. Demoscope was used as the primary source.

## Standard Eurobarometer 99 Spring 2023

### Response rates

For each country a comparison between the responding sample and the universe (i.e. the overall population in the country) is carried out. Weights are used to match the responding sample to the universe on gender by age, region and degree of urbanisation. For European estimates (i.e. EU average), an adjustment is made to the individual country weights, weighting them up or down to reflect their 15+ population as a proportion of the EU 15+ population.

The response rates are calculated by dividing the total number of complete interviews with the number of all the addresses visited, apart from ones that are not eligible but including those where eligibility is unknown. For wave 99.4 of the EUROBAROMETER survey, the response rates for the EU27 countries, calculated by Kantar Public, are:

	COUNTRIES	CAPI Response rates
BE	Belgium	52.8%
BG	Bulgaria	45.7%
CZ	Czechia	50.4%
DK	Denmark	40.0%
DE	Germany	23.9%
EE	Estonia	44.5%
IE	Ireland	45.2%
EL	Greece	29.7%

CAPI : Computer-Assisted Personal interviewing

## Standard Eurobarometer 99 Spring 2023

### Margins of error

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1,000 interviews, the real percentages vary within the following confidence limits:

#### Statistical Margins due to the sampling process

(at the 95% level of confidence)

*various sample sizes are in rows*

*various observed results are in columns*

	5%	10%	15%	20%	25%	30%	35%	40%	45%	50%
