### ISCO08 – Occupation ISCO 2008

Please give the text of the source question(s) on the respondent's occupation used in your field questionnaire. If ISCO08-codes are not coded directly from the responses, but derived from a country-specific occupation coding scheme, please provide a table of correspondence between country-specific and ISCO08 codes *attached as a separate file*. Also when you derive ISCO08 from another ISCO scheme, such as ISCO88, ISCO-COM (a variant developed for the European Union (EU)), or ISCO88-CIS developed by the Statistical Committee of the Commonwealth of Independent States, please document the source code and provide a correspondence list.

Please do **not** enter **standard** ISCO08 codes here, but report any deviations. **However, please note that country-specific codes, which are not part of the ISCO coding scheme cannot be accepted!**

Occupations should be coded on the 4-digit level of ISCO08. Occupational area 0 (Armed Forces occupations) needs some special attention. Since the ISCO variable is numeric, 4-digit codes starting with zero, such as 0110 will usually appear as 110 in the data file. It is therefore suggested that the only valid 3-digit codes in the data file are those armed forces occupations 110, 210 and 310.

In some special cases information concerning the occupation may be insufficient for 4-digit coding. Instead of coding these cases as [-8] "inadequately described" use 3-digit coding. In those very special cases where 3-digit coding is applied, fill in a zero for the missing digit. Example: code 131 is coded as 1310.

<i>Question no. and text</i>	What is/was your main occupation?
<i>Codes/ Categories deviating from ISCO08</i>	
<i>Note</i>	Asked as free text and coded manually to ISCO08, not detailed here.

**HOMPOP – How many persons in household**

<i>Question no. and text</i>	We would like to know about who is currently living with you in your household. We don't need to know names, just their ages, genders, and relationships to you. Please list all people living in the household at the moment in the grid below.
<i>Codes/ Categories</i>	
<i>Note</i>	Asked in much more detail, as “who else is living in the household with you”, and then summarised for the variables required. Also performed some correction, as we discovered that a large number of people failed to include their spouse or partner, possibly because they had just been answering questions about them separately. We are reverting to standard ISSP format for these questions from 2022.

**WEIGHT – Weighting factor**

Please report on whether you calculate any weighting variables. If you adjust for non-response bias, please enter the variable(s) on which the sample's distribution(s) is (are) adjusted to the population distribution(s). Please, also report if you apply any kind of rescaling.

<i>Post-stratification weight</i>	Yes, weights were based on logistic regression models of Responded (yes/no) by age group, Māori descent, occupation, region, deprivation quintile, and urbanicity. This was not to correct directly for the disproportionate sampling of our stratification, but it did this in the process of adjusting the sample back closer to the distributions of these variables in our initial sample from the New Zealand electoral rolls. The stratification, especially the oversampling of minority ethnic groups, was designed to account for known lower response rates among these groups – the primary aim was to achieve sufficient responses from these groups that we could conduct analyses by ethnicity.
<i>Weight to adjust for non-response bias</i>	No
<i>Are the final weights rescaled to net sample size (thus weighted sample size = unweighted sample size)?</i>	Yes
