	V280 This variable contains weights that adjust the weighted samples to make them representative for the countries from which they were drawn (according to highest level of education completed within age and to the regional distribution of the country's adult population if possible). Please use it with caution!	
	Note:	

CEEB5 1994 - ZA2577

Variable	Name	Label
	Question Text	

Where possible, the results for each country were post-weighted by a matrix of highest level of education completed within age, and also according to the regional distribution and sex of the country's adult population. Where information was not available for education within age, the results were weighted by each factor separately, and also by region. In Romania education was not weighted because actual data for this demographic did not exist. Weighting by an interlocking matrix of age and education was possible in Belarus, Estonia, Lithuania and Slovenia.
