Acknowledgements

Standard & Special Eurobarometer surveys are conducted on behalf of the Commission of the European Communities under the responsibility of the Directorate-General Communication and on occasion requested by other departments according to the policy they deal with. From the outset the European Commission is generously granting access to Eurobarometer primary data for re-use in social science research and training.

The integrated original datasets and related materials are delivered by the respective survey research institute in charge of survey implementation and fieldwork co-ordination.

Preparation and documentation of Eurobarometer primary data for long term preservation and usability happen in a cooperative arrangement between the teams at Inter-University Consortium for Political and Social Research (ICPSR) and GESIS Data Archive for the Social Sciences.

Introduction and preliminary remarks

The variable reports of the Standard & Special Eurobarometer survey series offer a comprehensive description of the data on study and variable level. For each Eurobarometer individual variable reports are provided. The reports are structured into five sections: Section one provides the description of the respective Eurobarometer Study, including bibliographic information, abstract, methodological specifications, remarks on weighting and general notes on data preparation. Section two gives an historical overview of the Eurobarometer Survey Series, including the institutional background and the development of geographical and topical coverage. A third section provides general information about the structure of Eurobarometer datasets, documentation standards and variable coding frames. Section four explains the details of the 'Variable Documentation' part in the following section five, which is the documentation of the variables with the complete question texts and answer categories of the master questionnaire and the corresponding archival remarks on data preparation or inconsistencies, if applicable. In addition, this variable report contains frequency counts, by country (sample), for almost all variables. These frequencies are based on weighted data using the adequate post-stratification weight, if applicable and as indicated in each table.

Data access

Primary data for statistical analysis and related documentation (basic bilingual questionnaires, national field questionnaire versions and variable reports) are made available online by GESIS (<http://zacat.gesis.org>), by the Inter-university Consortium for Political and Social Research through the ICPSR membership network, and through all Social Science Data Archives members of the Council of European Social Science Data Archives (CESSDA).

Usage requirement

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about related research activities, users of the data are requested to send to ICPSR or GESIS respectively bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data (surveys and respective variables) were used.

Disclaimer

The original collector of the data, ICPSR, GESIS, and the relevant funding agencies bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

1.2 Content

1.2.1 Abstract

This round of Eurobarometer surveys queried respondents on standard Eurobarometer measures such as life satisfaction, their country's goals for the next 10 or 15 years, and awareness of and attitudes toward the Common Market and the European Community (EC), as well as special topics including the recent changes in Eastern Europe, European sports and nationalism, and nuclear energy and radioactivity. The respondent's thoughts about the social dimension of the EC were explored by questions that asked whether the respondent thought the "Community Charter of Fundamental Social Rights" was a good thing and what policy areas the respondent would favor or disfavor for inclusion in the charter. On matters concerning changes in Eastern Europe, respondents were asked how much they agreed with several proposals for how the EC could best respond to the changes and which was more important--the Single European Market, the unification of the two German states, or the unification of Western and Eastern Europe.

Other questions asked how threatening fascists and communists were to the respondent's country's way of life and whether the respondent agreed with statements detailing the level of participation of fascists and communists in the political process. The topic of sports and nationalism was addressed through questions asking whether respondents felt prouder when national sports teams won or when European teams won, whether they would favor Olympic teams from EC countries wearing a European Emblem, and whether the number of foreign "football"(soccer) players on club teams in the EC countries should be limited. The final line of query dealt with nuclear energy and radioactivity and asked for the respondent's agreement with statements about the production, management, and wastes of nuclear power, how satisfied the respondent was with the information about radioactivity, and how much the respondent trusted several different sources of information about radioactivity.

Demographic and other background information was gathered on number of people residing in the home, size of locality, home ownership, trade union membership, region of residence, and occupation of the head of household, as well as the respondent's age, sex, marital status, education, occupation, work sector, religion, religiosity, subjective social class, left-right political self-placement, and opinion leadership.

1.3 Universe

The samples of Eurobarometer 33 are designed to be representative for the national population aged 15 years and over of the 12 European Community member countries, resident in and citizen of the respective country. Two separate samples have been drawn in the United Kingdom (Great Britain and Northern Ireland).

1.4 Sampling procedure

The basic sample design applied in all Member States is a multi-stage, random (probability) one. In all Member States a number of sampling points was drawn with probability proportional to populations size, for a total coverage of each Member State, and to population density.

For doing so, the points were drawn systematically from all 'administrative regional units', after stratification by individual unit and type of area. They thus represent the whole territory of the Member States according to the EUROSTAT-NUTS II and according to the distribution of the national, resident population in terms of metropolitan, urban and rural areas.

In each of the selected sampling points, a starting address was drawn, at random. That starting address formed the first of a cluster of addresses. The remainder of the cluster was selected as every Nth address by standard random route procedures from the initial address.

In Great Britain, a full random selection of respondents was applied, using electoral registers as sampling basis.

In each household the respondent was selected according to a random procedure, such as the first birthday method or the KISH-grid. At ever such address up to 2 recalls were made to achieve an interview with that respondent. The maximum number of interviews per household is one.

The regular sample size (in the sense of completed interviews) is 1000 respondents per country, except the United Kingdom with separate samples for Great Britain (1000) and Northern Ireland and Luxembourg (300).The effective number of realized interviews in this round is indicated in table 1.

1.5 Fieldwork

Between March 19 and April 16, 1990, INRA (EUROPE) carried out the 33rd wave of the STANDARD EUROBAROMETER, on request of the COMMISSION OF THE EUROPEAN COMMUNITIES, Directorate General X, INFORMATION, COMMUNICATION AND CULTURE, Unit 'Surveys, Research, Analyses'. INRA (Europe) is a European Network of Market and Public Opinion Research agencies, coordinated by the European Co-ordination Office (ECO), Avenue R. Vandendriessche 18, B - 1150 Brussels.

1.6 Mode of data collection

In all Member States, fieldwork was conducted on the basis of detailed and uniform instructions prepared by the European Co-ordination Office (ECO). All interviews were carried out face-to-face in people's homes in the respective national languages.

1.7 Weighting

In general the Eurobarometer datasets provide for two types of weighting, a post-stratification sample weighting and a population size weighting.

The **post-stratification weight**, also referred to as redressment or non-response weight, carries out comparisons between the sample composition and a proper universe description with respect to selected attributes such as sex, age or region. The availability of this weight over time and for individual countries is documented in table 2. Until Eurobarometer 31A the corresponding variable is labelled NATION WEIGHT II. Only starting with Eurobarometer 32 post-stratification weights are available continuously and for all samples.

Until Eurobarometer 6 underrepresented rural cases for FRANCE are duplicated; duplicate case indicators (weights) are only available for ECS1970, ECS1971 and Eurobarometer 2. In ECS1971 and ECS1973 a special weighting factor for the NETHERLANDS indicates the number of times that a case is duplicated in the Dutch part

The YOUTH OVERSAMPLES* in Eurobarometer 17 and 28.1 are weighted separately and across ALL samples as documented in the respective study and weight variable description.

Eurobarometer 33 provides only one (post-stratification) NATION WEIGHT which corresponds to NATION WEIGHT I (UK WEIGHT) for comparison of individual countries and adjusting the British and the Northern Irish samples to their respective proportions in the United Kingdom. The resulting samples are ADJUSTED TO THE STANDARD SIZE of 1000 (LU: 300) respondents. There is no post-stratification weighting factor which could be applied for descriptive analysis of Great Britain and Northern Ireland separately.

The three EUROPEAN WEIGHTS provide adjustments for each (national) sample in proportion to its share in the total population aged 15 and over, of the European Union, within groups of member countries representing different historical states of European integration (EU6, EU10 and EU12). All post-stratification factors are included.

For more detailed information on the individual weights please see the corresponding variable description.

1.8 Data preparation

The data received by ICPSR from INRA(Europe) were checked for missing and duplicate records, for illegal (wild) codes and for consistency of response patterns. Errors discovered by these procedures were corrected or noted in this codebook. Indices and other derived summary variables were also checked and corrected as necessary. Complete machine-readable documentation was also created for this dataset by ICPSR.

ICPSR has either added "" codes to indicate responses that had no code values in the original data (system missing values) or recoded variables to the "" value if the variable had been inappropriately coded. Users should also note that on occasion the number of responses to a particular question may exceed the maximum indicated in the interviewer instructions.

Question text and contingency text appearing in this codebook and ICPSR's machine-readable documentation is

taken from INRA(Europe)'s English language version of the questionnaire. Whenever a discrepancy occurs between INRA(Europe)'s codebook and its English language questionnaire as to the coding scheme of a variable, the former is followed in the ICPSR documentation.

2 Eurobarometer Series Description

2.1 Series name

The Standard and Special Eurobarometer (a.k.a. Euro-Barometer) Survey Series

2.2 Series information

The Standard and Special Eurobarometer surveys are the products of a unique program of cross-national and cross-temporal survey research. The effort began in early 1970, when the Commission of the European Communities sponsored simultaneous surveys of the publics of the European Community. In general they are carried out in spring and fall of each year. Three pilot studies were conducted in 1970, 1971 and 1973 under the header of European Communities Studies; "Attitudes towards Europe" (GESIS id ZA0078), the very first comparative survey across European Communities founder members in 1962, can be seen as an early forerunner. The primary data of the first explicit Eurobarometer, conducted in spring 1974, have not been preserved.

2.3 Principal investigators and institutional background

The Eurobarometer program was initially launched and managed until 1986 by Jacques-René Rabier, head of the Commission's press and information directorate and afterwards special advisor to the Commission of the European Communities. He counted with the political support of the European Parliament and the close co-operation of Ronald Inglehart. The political scientist at the University of Michigan was then developing his theory of value change in modern societies and his materialist/post-materialist items would become integral part of the Eurobarometer until the mid nineties. Between 1987 and 1996 the program was continued and considerably enlarged under the direction of Karlheinz Reif, since 1993 together with Anna Melich.

Anna Melich took over the Eurobarometer direction from 1997 to 1999, by then still within the organizational framework of the former Directorate-General X, Public Opinion Surveys and Research Unit. In 2000/2002 Eurobarometer were intermittently conducted in the framework of the DG Education and Culture, Citizens' Centre - Analysis of Public Opinion under the direction of Harald Hartung, and starting with Eurobarometer 54 under DG Press and Communication, initially directed by Thomas Christensen. Since 1999 the organisation and supervision of the surveys were consecutively executed by Rubén Mohedano-Brèthes (until 2002) and Renaud Soufflot de Magny (until 2006), with Antonis Papcostas as head of unit between 2003 and 2010.

The main survey results are regularly published on the European Commission's Public Opinion website in official standard and special topic reports.

2.4 Development of geographical and population coverage

In all European Union (formerly "European Communities") member countries Standard Eurobarometer samples were initially drawn among the national population, aged 15 and over. Starting with Eurobarometer 41.1 the target population is the population of any nationality of an European Union member country, aged 15 years and over, resident in any of the Member States. For test purposes Eurobarometer 41.0 included a non-national European Union citizens oversample.

Eurobarometer regularly include all member countries, starting with the six founder members and in accordance with the subsequent enlargement process. Norway has been in-officially included in selected waves between 1989 (EB34) and 1996 (EB46), Finland started before the actual enlargement in 1993 (EB39.0), and a few Swiss Eurobarometer were run in parallel to selected waves or topics starting in 1999 (EB51.1) in Switzerland. Candidate Countries (CC) and Accession Countries (AC) for the Eastern enlargement process were first surveyed in the Candidate Countries Eurobarometer series (2001-2004) and then all included in the standard series, even before accession as in the cases of Turkey or Macedonia.

Additional samples are drawn for Great Britain and Northern Ireland almost from the start, in Germany (East and West) after the re-unification in 1989, and in Cyprus for the Turkish Cypriote Community (Northern Cyprus) since 2004 for selected standard and topical waves.

The regular standard sample size (in the sense of completed interviews) in Eurobarometer surveys is 1000 respondents per country, except small countries like Luxembourg or Malta. The 44.2bis MEGA-survey increased the standard sample up to 6000 respondents (for the largest countries) in order to achieve more confidence for analysis on sub-national level.

Oversamples have been drawn intermittently if required by the topic, i.e. to ensure that there are enough members of the relevant population subgroup to report sufficiently reliable estimates. Intentionally more people are selected from the respective group than would typically be done if everyone in the sample had an equal chance of being selected.

Table 4: Oversamples for special topic Eurobarometer

Topic	(Over-)Sample	Eurobarometer Survey
Young Europeans	Youth aged 15-24	17, 28.1, 34.2, 47.2OVR, 55.1OVR
Elderly Europeans	Elderly aged 60+	37.2
Consumer Behaviour	Responsible for shopping	41.0
Unemployment	Unemployed	44.3OVR
Working Conditions	Professionally active	37.0+1, 39.0+1
Drug Abuse	Youth aged 15-24	43.0+1, 57.2OVR
Education Issues	Youth aged 15-24	44.0 / 44.1 (data not integrated)

2.5 Standard question program and special topics

Standard Eurobarometer surveys were designed to provide a regular monitoring of the social and political attitudes among the European publics, to obtain regular readings of support for European integration, public awareness of and attitudes toward European unification, the institutions of the European Community / European Union, and its policies in complementary fashion. Attitudes toward the organization and role of the European Parliament and electoral behavior became a major topic in pre- and post- European Elections times. The standard program was complemented by measures of general socio-political orientations, of subjective satisfaction and the perceived quality of life, or of cultural, national and European identities.

Intermittently Standard Eurobarometer have investigated SPECIAL TOPICS, such as agriculture, biotechnology, energy, environment, family planning, gender roles, health related issues, immigration, poverty and social exclusion, regional identity, science and technology, information society, working conditions, urban traffic, knowledge of languages etc. In the case of some supplementary studies, special youth and elderly samples have been drawn (see table 4).

Starting with Eurobarometer 34 (1990) additional supplementary surveys on special issues have been conducted under each main wave number, identified by dot-separated sub-numbers for each individual survey. Usually only one survey per main wave includes the standard and trend module with focus on European integration issues. The following list (table 5) identifies the surveys containing the standard module and with results reported in the corresponding official standard report, or which at least include a subset of standard indicators, or with focus on European integration in a special topic context (e.g. "The future of Europe" in Eurobarometer 65.1).

Table 5: Overview of Eurobarometer surveys with standard EU and trend question modules

Further and regularly updated information on the Eurobarometer survey series is provided through the GESIS Eurobarometer Data Service micro-site: <http://www.gesis.org/eurobarometer>

3 Dataset structure and standards

Standard and Special Eurobarometer are processed and documented by the Inter-university Consortium for Political and Social Research (ICPSR) and by the GESIS Data Archive department in accordance with agreed standards, which may in some details diverge from the usual ICPSR or GESIS archive standards. In addition and as long as reasonable it was adhered to standards once established for the Eurobarometer series in the course of the years.

3.1 Dataset structure

In general the variable structure of the analysis dataset is aligned to the basic bilingual questionnaire, preceded by a set of technical variables. These comprise the archive identification variables (archive study and version id), the survey identification variables (wave and unique respondent id), and several standard NATION variables identifying the different samples (countries or regions) and relevant groups of samples in the dataset with the corresponding WEIGHT variables provided by the fieldwork institutes (see 1.7). A special alphanumeric NATION variable is provided based on the ISO 3166 country code standard for the purpose of breaking down variables by sample in terms of clearly summarized cross-tabulations.

The questionnaire variables usually consist of three types, the substantial questions (Q), the Eurobarometer standard demographics (D) and the interview protocol variables (P). The dataset is concluded by constructed index variables (C), usually as provided by the fieldwork institute, by a questionnaire SPLIT variable if applicable, and by further original identification variables.

Variable names consist of the standard prefix 'V' and the consecutive variable number, except ISOCNTRY and VERSION variables if subsequently added to older datasets. Variable labels are standardized in the sense that they provide keywords based on the question text and that these keywords are applied consistently if questions or question items are repeated over time (trend variables). Variable label may include abbreviations if required, e.g. limitations regarding the length of variable labels in older versions of statistical analysis software. Starting with Eurobarometer 33 the variable labels include the respective question number as a reference to the basic bilingual questionnaire.

3.2 Coding frames

By general rule, the variables adopt the coding frame as specified in the basic bilingual questionnaire, except multiple response questions (see 1.8), questions with country specific answer categories and missing values.

3.2.1 Country specific answer categories

Eurobarometer include some questions (variables) with country specific answer categories like INCOME, SIZE OF COMMUNITY, REGION or variables related to VOTING BEHAVIOUR with reference to POLITICAL PARTIES. Until Eurobarometer 48 only one integrated variable is supplied with each category representing country specific meanings (e.g. geographic regions) which are not documented within the analysis dataset by means of value labels, but only in the extended variable description in the variable report. Starting with Eurobarometer 49 the integrated variables are retained but complemented by completely labeled country specific variables. The country specific coding schemes and categories are maintained as a standard over time as long as the category schemes

provided in the questionnaire are remain comparable.

Special attention is given to the coding of POLITICAL PARTIES in voting behavior variables such as VOTE INTENTION or LAST VOTE based on a standard coding scheme, originally developed for the Eurobarometer by Ronald Inglehart.

Starting with Euro-Barometer 2 the coding of this variable has been standardized following an approximate ordering of each country's political parties along a "left" to "right" continuum in the first digit of the codes. Parties coded 01-39 are generally considered on the "left", those coded 40-49 in the "centre", and those coded 60-89 on the "right" of the political spectrum. Parties coded 50-59 cannot be readily located in the traditional meaning of "left" and "right". The second digit of the codes is not significant to the "left-right" ordering. Codes 90-99 contain the response "other party" and various missing data responses. Major "party families" like the Social Democrats or Conservatives have been assigned identical values across countries, if possible.

From Eurobarometer 69.2 onwards, the "party family" harmonization approach has been sharpened following and updating the coding scheme developed by ZEUS for the Mannheim Eurobarometer Trend File. This ZEUS Code of Party Families is country specific, i.e. the categories have different meanings for different countries. It has three digits: The first represents the party family, the second and third identify an individual party in this family. Individual parties are coded consistently over time. The assignment of parties to families is done according to their overall ideological orientations.

Table 6: ZEUS Party Family Code (slightly modified)

Category	Party Family
0	(001-099) not affiliated / electoral alliances across "families"
1	(100-199) Communists
2	(200-299) Socialists
3	(300-399) Liberals
4	(400-499) Christian Democrats
5	(500-599) Conservatives
6	(600-699) Extreme Rights / Nationalists
7	(700-799) Regionalists / Ethnic
8	(800-899) Environmental parties
9	(900-949) Agricultural parties
9	(950-989) other special issue parties (e.g. Eurosceptics) and independents
	990 other (spontaneous)
	994 not voting age
	995 empty ballot (blank) or invalid vote
	996 not voted / would not vote
	997 Refused
	998 DK / DK+NA if NA not coded separately
	999 INAP (inappropriate)

If available, the former standard category used up to Eurobarometer 61 is always referenced in the variable description. Due to general changes in party systems and to the ideological development of individual political

parties, the assignment of parties to party families cannot claim general validity. Users may modify these codings or part of these codings in order to suit their specific needs.

3.2.2 Missing values

In general missing value codes are defined in accordance with the standard once established for the Eurobarometer series, in particular the default use of whatever value supplied by the basic questionnaire for DK ("don't know") responses, unless a standard coding scheme is applied for demographic or protocol variables. The value 0 is applied for NA (i.e. "not ascertained" resp. "no answer") and the value 9 (99, 999, ...) for INAP (i.e. "inappropriate" resp. "not applicable"). If one of these values falls into the valid range of codes, the missing values are shifted to the next available missing value code or "level", e.g. if 0 is used in a dichotomous variable (NOT MENTIONED), value 9 is used for NA, respectively value 8 if value 9 is already used for INAP. If necessary the corresponding two- or more digit codes are used (99, 999, 98, 998 ...). Recently separate missing values are coded for INAP depending on whether the respondent was not asked a question due to questionnaire routing (filter non-response) or whether the question was not provided for in the country's field questionnaire. Other missing values (e.g. REFUSAL) are coded with the in each case next available code (e.g. 7, 97, 997, ...). In the analysis data set these codes are by default declared and treated as USER MISSING, but may be modified by the user to suit specific needs.

3.3 International documentation standard

The variable documentation is set up in accordance with the international metadata specifications for the social and behavioural sciences, established by the Data Documentation Initiative <DDI>. The variable reports are based on the XML representation of DDI version 2. The documentation combines the exact wording and sequence of question components (question text, interviewer instruction, response categories, etc.) from the basic bilingual (master) questionnaire with the variable description (variable name, values, and labels) of the analysis dataset. General remarks and comments referring to a certain variable are defined as variable notes. Notes can be references to trend (comparability) information, standards applied for coding frames, problems in questionnaire translation, but also references to data problems or other specific characteristics.

4 Explanation of the variable documentation

The variable documentation part describes each variable in the analysis data file in terms of relevant metadata and frequency distributions. The variable documentation is set up by means of the GESIS Dataset Documentation Manager (DSDM) and in accordance with international metadata standards (DDI-Codebook/XML).

In general, the following abbreviations are used to indicate countries or (sub-national) areas. As far as applicable, the ISO 3166-1 alpha-2 country codes have been applied and coded accordingly in the alphanumeric sample identification variable (NATION - ALL SAMPLES ISO 3166).

AT	Austria	HR	Croatia
BE	Belgium	HU	Hungary
BG	Bulgaria	IE	Ireland
CY	Cyprus	IT	Italy
CY-TCC	Turkish Cypriote Community	LT	Lithuania
CZ	Czech Republic	LU	Luxembourg
DE	Germany (-1989)	LV	Latvia
DE-W	Germany West (1990 ff.)	MK	Macedonia (FYROM)
DE-E	Germany East (1990 ff.)	MT	Malta
EE	Estonia	NL	The Netherlands
ES	Spain	PL	Poland
FI	Finland	PT	Portugal
FR	France	RO	Romania
GB	United Kingdom	SE	Sweden
GB-GBN	Great Britain	SI	Slovenia
GB-NIR	Northern Ireland	SK	Slovakia
GR	Greece	TR	Turkey

The example explained below reproduces the information appearing in the variable documentation part for a typical substantive variable. Results are usually broken down by country (sample) or represented by frequency counts in the case of country specific variables. In the case of variables with long lists of coded "real" values (e.g. age), results are only presented for the corresponding categorized variable, if available. The content and construction of technical, administrative or other generated variables is described as appropriate.

The frequencies for substantive variables are calculated on the base of weighted data, as indicated with each table and in accordance with the European Commission's official Eurobarometer reports. Typically the sample specific post-stratification (redressment) weight is applied (WEIGHT RESULT FROM TARGET or NATION WEIGHT II). Due to rounding, users may find slightly different figures if using other statistical packages, especially if the number of cases is very low.

The complete question and answer texts are taken from the English language part of the respective basic bilingual questionnaire (master questionnaire) as provided by the coordinating fieldwork institute.

CROSS-TABULATION: The absolute frequencies of the occurrence of values (<i>absolute values</i>) refer to the number of cases in the weighted dataset as indicated, in this case <i>weighted by V8</i> . The relative frequencies (<i>row percent</i>) refer to the valid cases (<i>n valid sum</i>), i.e. the total number of cases (<i>n sum</i>) reduced by the number of cases defined as missing data (<i>M</i>). For display and place saving reasons excluded countries or areas may be completely dropped from the table.																																																																																																																																																																																																																																																																																																																									
FREQUENCY COUNTS: For country specific variables relative frequencies are calculated in- and excluding missing data (<i>M</i>), i.e. <i>percent</i> on the basis of all cases (<i>sum</i>) and <i>valid percent</i> on the basis of the <i>valid cases</i> .																																																																																																																																																																																																																																																																																																																									

5 Variable Documentation

Variable	Label
----------	-------

v1	ICPSR/ZA STUDY NUMBER ICPSR/ZA Study Number
----	--

v1

Value	Label	Missing	Count	Percent	Valid Percent
1753			11775	100.0	100.0
	Sum		11775	100.0	100.0
	Valid Cases		11775		

v2 ICPSR EDITION NUMBER-1

ICPSR Edition Number

The number identifying the release edition of this dataset.

1 First ICPSR edition, July 1995

Note:

Please see variable VERSION ("GESIS ARCHIVE VERSION") for further information on the version number of this data set and the corresponding release date.

v2

Value	Label	Missing	Count	Percent	Valid Percent
1	1ST CODEBOOK EDITION (RELEASE MAY 7, 2007)		11775	100.0	100.0
	Sum		11775	100.0	100.0
	Valid Cases		11775		

version GESIS ARCHIVE VERSION
VERSION AND RELEASE DATE OF THE ARCHIVE DATA SET

This variable identifies the GESIS archive version number of this data set and the corresponding release date, recorded as an alphanumeric string. The version number is composed of a sequence of three numbers. The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases), the minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels), and the third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

On occasion of the implementation of this versioning scheme (2010-04-13), the default version number 1.0.0 has been created automatically for this Eurobarometer.

Version 1.1.0 adds the crosstabulation variable ISOCNTRY and the VERSION variable and makes minor errata corrections which are documented on variable level, if applicable.

Former version or edition identification variables are maintained unchanged as a reference to former releases.

version					
Value	Label	Missing	Count	Percent	Valid Percent
1.1.0 (2012-07-01)			11775	100.0	100.0
	Sum		11775	100.0	100.0
	Valid Cases		11775		

v3 ICPSR PART NUMBER-1

ICPSR Part Number

The number identifying this part of a 1-part study.

1 Part one of a one-part study

v3

Value	Label	Missing	Count	Percent	Valid Percent
1	PART ONE		11775	100.0	100.0
	Sum		11775	100.0	100.0
	Valid Cases		11775		

v4

ICPSR SEQUENTIAL ID

Sequential respondent identification number assigned by ICPSR

A unique identification number is assigned to each respondent.

Note:

Actual number is coded.

isocntry NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)
NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)

All surveyed countries and regions, i.e. including separate samples for East- / West-Germany, Great Britain / Northern Ireland, and the Turkish Cypriot Community (TCC), are coded in accordance with the ISO 3166-1-alpha-2 country code, if available. ISO 3166-2 is applied for the United Kingdom subdivisions. ISO standard codes are not available for the "historical" East / West subdivision of Germany (DE-E / DE-W) and for the Turkish Cypriot Community in northern Cyprus (CY-TCC), the internationally not recognized "Turkish Republic of Northern Cyprus".

Note:

In the case of Eurobarometer 33 in the crosstabulation variable ISOCNTRY the British and Northern Irish samples are coded together as "GB" (United Kingdom) in accordance with NATION WEIGHT variable which does not distinguish between Great Britain and Northern Ireland, i.e. does not weight both samples separately.

isocntry

v5 NATION I (UNITED KINGDOM)

Nation of interview

This variable identifies the E.C. nation in which the respondent was interviewed. A unique numeric code is assigned to each of the 12 E.C. countries.

- 1 France
- 2 Belgium
- 3 Netherlands
- 4 Germany
- 5 Italy
- 6 Luxembourg
- 7 Denmark
- 8 Ireland
- 9 United Kingdom
- 10 Greece
- 11 Spain
- 12 Portugal

v6 NATION WEIGHT I (WEIGHT BASE 1000)

Normal Weight Base 1000

This weight variable adjusts the British and Northern Ireland samples to their respective proportions in the United Kingdom and should be used whenever the United Kingdom is to be analyzed as a whole. All nation weights are included and all samples are adjusted to the standard size.

v7 NATION II (GB AND NORTHERN IRELAND)

Nation of interview with two codes for the United Kingdom

This variable identifies the nation of interview and two areas of the U.K.: Great Britain and Northern Ireland.

- 1 France
- 2 Belgium
- 3 Netherlands
- 4 Germany
- 5 Italy
- 6 Luxembourg
- 7 Denmark
- 8 Ireland
- 9 Great Britain
- 10 Northern Ireland
- 11 Greece
- 12 Spain
- 13 Portugal

v7

Value	Label	Missing	Count	Percent	Valid Percent

v8 WEIGHT EURO 12

European Weight 12 (Great Britain and Northern Ireland together)

This variable contains the weight that adjusts each national sample in proportion to its nation's share in the total population of the European Community countries as categorized by Nation I (V5).

v9	WEIGHT EURO 10
	European Weight 10

This variable contains the weight that adjusts each national sample in proportion to its nation's share in the total population of the European Community countries in their historic composition.

This weight excludes Spain and Portugal. This weight includes national weighting for each sample, adjusted to the standard size.

v10	WEIGHT EURO 6
	European Weight 6

This variable contains the weight that adjusts each national sample in proportion to its nation's share in the total population of the European Community countries in their historic composition.

This weight includes the six EC founder-members and includes national weighting for each sample, adjusted to the standard size.

v11 Q1 ELECTORAL REGISTER

Q.1

Are you... (NATIONALITY)?

(IF YES)

Do you know whether your name appears in the Electoral Register (the register of people entitled to vote at the next General Election), under your present address, at another address or does not appear at all?

(IF CODE 5: CLOSE INTERVIEW)

- 1 At present address
- 2 At another address
- 3 Don't know if registered
- 4 Does not appear at all
- 5 Is not ... (nationality)

v16 Q6_1 VALUE ORIENTATION - POL GOALS 1ST

Q.6

There is a lot of talk these days about what (YOUR COUNTRY)'s goals should be for the next ten or fifteen years.

On this card are listed some of the goals that different people say should be given top priority.

Q.6_1

Would you please say which one of them you yourself consider to be most important in the long run?

(SHOW CARD - ONE ANSWER ONLY)

- 0 NA
- 1 Maintaining order in the country
- 2 Giving the people more say in important government decisions
- 3 Fighting rising prices
- 4 Protecting freedom of speech
- 5 DK

v18 Q7 SOCIAL CHANGE - BASIC ATTITUDES

Q.7

On this card are three basic kinds of attitudes towards the society we live in. Please choose the one which best describes your own opinion.

(SHOW CARD, ONE ANSWER ONLY)

- 0 NA
- 1 The entire way our society is organised must be radically changed by revolutionary action
- 2 Our society must be gradually improved by reforms
- 3 Our present society must be strongly defended against all subversive forces
- 4 DK

v23 Q12 EC PRESIDENCY IRELAND - HEARD

Q.12

ASK Q.12 - 13, IN REPUBLIC OF IRELAND ONLY

In the European Community, each member State, in turn, becomes the President of the Council of Ministers for six months. Just now, it's the turn of the REPUBLIC OF IRELAND. Have you recently read in the newspapers or heard on radio or television anything about the Irish presidency?

- 1 Yes
- 2 No
- 3 DK
- 9 INAP, only interviewed in Ireland (not coded 8 for variable 7)

v23, weighted by v6

Value	Label	Missing	Count	Percent	Valid Percent
1	YES		696	6.0	74.5
2	NO		238	2.1	25.5
3	DK	M	66	0.6	
9	INAP - ONLY IRELAND	M	10600	91.4	
	Sum		11600	100.0	100.0
	Valid Cases		934		

v24 Q13 EC PRESIDENCY IRELAND - IMPORTANCE

Q.13

ASK Q.12 - 13, IN REPUBLIC OF IRELAND ONLY

Whether you have heard about it or not, do you think it is important or not that the REPUBLIC OF IRELAND is President of the Council of Ministers of the European Community at this time? Would you say it is...?

(READ OUT)

- 1 Very important
- 2 Important
- 3 Not very important
- 4 Not at all important
- 5 DK
- 9 INAP, only interviewed in Ireland (not coded 8 for variable 7)

v50 Q21 SPORTS - EC EMBLEM AT OLYMPICS

Q.21

At the 1992 Olympic Games in Barcelona and Albertville, would you be in favour or not in favour of the athletes from our country wearing on their shirts the emblem of the European Community next to the emblem of our country? If in favour: would that be very much or to some extent? If against: would that be very much or to some extent?

- 0 NA
- 1 In favour - very much
- 2 In favour - to some extent
- 3 Against - to some extent

v51 Q22 SPORTS - FOREIGN FOOTBALL PLAYERS

Q.22

The Commission of the European Communities is of the opinion that the free movement of workers should be applied to sports. Specifically for football, would you be for or against limiting the number of foreign football players in the club teams in this country? Would you be...?

v69 Q25 SUMMERTIME - SATISFACTION

Q.25

SUMMERTIME, which means we put our clocks forward one hour from spring to autumn, has been in operation for some years in all European countries. The main reason was to save electricity. It has now been proved that there are no significant energy savings. On the other hand, the extra one hour of daylight gives the opportunity for more leisure and outdoor activities. On the whole, are you personally very satisfied, fairly satisfied, not very satisfied or not at all satisfied with this arrangement?

- 0 NA
- 1 Very satisfied
- 2 Fairly satisfied
- 3 Neither satisfied, nor dissatisfied (SPONTANEOUS)
- 4 Not very satisfied
- 5 Not at all satisfied
- 6 Indifferent (SPONTANEOUS)

v174 Q58_6 RADIATION RISK NEAR TRANSPORTS

Let's turn to another topic...

Q.58

I am going to show you a certain number of situations which expose people to radiation.

(SHOW LIST)

From this list could you tell me the two situations which in your opinion lead to the most serious consequences?

(TWO REPLIES ONLY)

Q.58_6 Living near a road along which radioactive minerals or waste are transported

v197 Q62_6 INFO RADIOACTIVITY LATE/NOT WIDELY

Q.62

IF NOT VERY SATISFIED OR NOT AT ALL SATISFIED IN Q.60

Which of the following reasons best explain why you are not satisfied with the information you get about radioactivity?

(SHOW CARD - MULTIPLE ANSWERS POSSIBLE)

Q.62_6 The information is given late and is not widely circulated

v232 D11R AGE EDUCATION RECODED

D.11(R). Age when respondent finished full-time education - collapsed categories

- 0 NA
- 1 Up to 15 years
- 2 16 - 19 years
- 3 20 + years
- 4 Still studying

Derivation:

This variable collapses answers to D.11 into four categories

Note:

See D.11 for complete question text

v241 D16 INCOME

D.16(A)

We would like to analyse the survey results according to the income of the people we interviewed.

(SHOW INCOME CARD)

Here is an income scale; we would like to know in what group your family is, counting all wages, salaries, children allowances, pensions and any other income that comes in. Just give me the letter of the group your household falls into before tax and other deductions.

0 NA

97 Refusal

98 DK

in France (FR):

French francs per month

1 Less than 3000

2 3000 to 3999

3 4000 to 4999

4 5000 to 5499

5 5500 to 5999

6 6000 to 6999

7 7000 to 7999

8 8000 to 8999

9 9000 to 9999

10 10000 to 12499

11 12500 to 14999

12 15000 or more

in Belgium (BE):

Belgian francs per month

0 NA

1 Less than 20.000

2 20.000 to 29.999

3 30.000 to 39.999

4 40.000 to 49.999

5 50.000 to 59.999

6 60.000 to 69.999

7 70.000 to 79.999

8 80.000 to 89.999

9 90.000 to 99.999

10 100.000 to 109.999

11 110.000 to 119.999

12 120.000 OR MORE

in Netherlands (NL):

Dutch guilders per month

- 1 Less than f 1.250
- 2 f 1.250 to f 1.499
- 3 f 1.500 to f 1.749
- 4 f 1.750 to f 1.999
- 5 f 2.000 to f 2.249
- 6 f 2.250 to f 2.499
- 7 f 2.500 to f 2.749
- 8 f 2.750 to f 3.249
- 9 f 3.250 to f 3.749

v242 D16_1 INCOME QUARTILES - HARMONISED

D.16(B) (HARMONISED) - Here is an income scale; we would like to know in what group your family is, counting all wages, salaries, children allowances, pensions and any other income that comes in. Just give me the letter of the group your household falls into before tax and other deductions.

- 1 - - (Lowest income "quartile")
- 2 - (Next to lowest income "quartile")
- 3 + (Next to highest income "quartile")
- 4 + + (Highest income quartile)
- 5 NA/DK/refusal

v252 D25R SOCIAL CLASS SUBJECTIVE - RECODED
D.25(R) Subjective social class - collapsed categories

- 0 NA
- 1 Working
- 2 Lower middle
- 3 Middle
- 4 Upper middle
- 5 Upper
- 6 Refusal/other/DK

Derivation:

This variable collapses responses to D.25 into 6 categories

Note:

See D.25 for complete question text

v255 D28 RELIGION DENOMINATION

D.28

Do you consider yourself as belonging to a particular religion?

(IF YES)

Which one?

(IF CODE 1-4: GO TO D.29

IF CODE 5-10: GO TO D.30)

- 0 NA
- 1 Roman Catholic
- 2 Protestant
- 3 Orthodox (NL: Gereformeerd)
- 4 Jewish
- 5 Muslim
- 6 Buddhist
- 7 Hindu
- 8 Other
- 9 None
- 10 DK

Note:

RELIGIOUS DENOMINATION is documented as "Orthodox" for code '3' in the original Eurobarometer codebooks and basic questionnaires starting with survey number 32. This is not correct in the case of the Netherlands. Dutch respondents have been asked for the Protestant section "Gereformeerd" in the place of "Orthodox". Corrected in the ZA codebooks for deliveries after March 16, 1999.

v262 P2_2 INTERVIEW TIME - MINUTES

P.2(MINUTE) Time of the beginning of the interview: MINUTES

0 On the hour

1 One minute after the hour

60 Wild code

98 NA

v263 P2 INTERVIEW TIME

P.2(R) Time of the beginning of the interview

- 1 < 8 h
- 2 8 - 12 h
- 3 13 - 16 h
- 4 17 - 19 h
- 5 20 - 22 h

Derivation:

This variables collapses the responses to P.2(HOUR) into five categories

Note:

There were no interviews begun prior to 8 a.m.

v270 C1 OPINION LEADERSHIP - COG MOB INDEX

C.1 Opinion Leadership

Cognitive Mobilization Index (1)

- 0 NA
- 1 Low cognitive mobilization
- 2 Medium-low cognitive mobilization
- 3 Medium-high cognitive mobilization
- 4 High cognitive mobilization

Derivation:

This variable combines responses to Q.4 and Q.5 to form an indicator of an individual's potential to take an active role in the political process.

CODE 1: coded 3, 4 or 5 for Q.4 and 3 or 5 for Q.5

CODE 2: coded 3, 4 or 5 for Q.4 and 2 for Q.5; or coded 1 or 2 for Q.4 and 3 or 5 for Q.5

CODE 3: coded 3, 4 or 5 for Q.4 and 1 for Q.5; or coded 1 or 2 for Q.4 and 2 for Q.5

CODE 4: coded 1 or 2 for Q.4 and 1 for Q.5

For a complete discussion of this variable and its correlates, see Ronald Inglehart, THE SILENT REVOLUTION: CHANGING VALUES AND POLITICAL STYLES AMONG WESTERN PUBLICS (Princeton University Press, 1977), Chapter 11. This variable is labeled the Opinion Leadership Index in the codebooks for Euro-Barometers 3, 4, 5 and 6.

v271 C2 VALUE ORIENTATION POST-MATERIALISM

C.2 Value Orientation

Materialist/Post-materialist values index

- 1 Materialist
- 2 Mixed
- 3 Post materialist

Derivation:

This index was constructed from responses to Q.6_1 and Q.6_2.

CODE 1: coded 1 for Q.6_1 and 3 for Q.6_2; or coded 3 for Q.6_1 and 1 for Q.6_2

CODE 2: coded 1 or 3 for Q.6_1 and 2 or 4 for Q.6_2; or coded 2 or 4 for Q.6_1 and 1 or 3 for Q.6_2

CODE 3: coded 2 for Q.6_1 and 4 for Q.6_2; or coded 4 for Q.6_1 and 2 for Q.6_2

For a complete discussion of this variable, see Ronald Inglehart, THE SILENT REVOLUTION: CHANGING VALUES AND POLITICAL STYLES AMONG WESTERN PUBLICS (Princeton University Press, 1977).
