Acknowledgements

Standard & Special Eurobarometer surveys are conducted on behalf of the Commission of the European Communities, under the responsibility of the Directorate-General Communication and on occasion requested by other departments according to the policy they deal with. From the outset the European Commission is generously granting access to Eurobarometer primary data for re-use in social science research and training.

The integrated original datasets and related materials are delivered by the respective survey research institute in charge of survey implementation and fieldwork co-ordination.

Preparation and documentation of Eurobarometer primary data for long term preservation and usability happen in a cooperative arrangement between the teams at Inter-University Consortium for Political and Social Research (ICPSR) and GESIS Data Archive for the Social Sciences.

Introduction and preliminary remarks

The variable reports of the Standard & Special Eurobarometer survey series offer a comprehensive description of the data on study and variable level. For each Eurobarometer individual variable reports are provided. The reports are structured into five sections: Section one provides the description of the respective Eurobarometer Study, including bibliographic information, abstract, methodological specifications, remarks on weighting and general notes on data preparation. Section two gives an historical overview of the Eurobarometer Survey Series, including the institutional background and the development of geographical and topical coverage. A third section provides general information about the structure of Eurobarometer datasets, documentation standards and variable coding frames. Section four explains the details of the 'Variable Documentation' part in the following section five, which is the documentation of the variables with the complete question texts and answer categories of the master questionnaire and the corresponding archival remarks on data preparation or inconsistencies, if applicable. In addition, this variable report contains frequency counts, by country (sample), for almost all variables. These frequencies are based on weighted data using the adequate post-stratification weight, if applicable and as indicated in each table.

Data access

Primary data for statistical analysis and related documentation (basic bilingual questionnaires, national field questionnaire versions and variable reports) are made available online by GESIS (<http://zacat.gesis.org>), by the Inter-university Consortium for Political and Social Research through the ICPSR membership network, and through all Social Science Data Archives members of the Council of European Social Science Data Archives (CESSDA).

Usage requirement

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about related research activities, users of the data are requested to send to ICPSR or GESIS respectively bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data (surveys and respective variables) were used.

Disclaimer

The original collector of the data, ICPSR, GESIS, and the relevant funding agencies bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

1.2 Content

1.2.1 Abstract

The major focuses of this Eurobarometer survey are the environment and personal health. Opinions were sought on environmental issues such as nuclear accidents and radioactivity, pollution, and conservation of natural resources, as well as on the activities surrounding the European Year of the Environment. Health-related issues focused on cancer: smoking, knowledge and views regarding the causes of cancer, the extent of its occurrence in society, and medical recommendations for its early detection and prevention. Respondents were also asked if they had undergone medical examinations to screen for cancer. Women were questioned about specific kinds of cancer detection examinations as well. Other health-related items concerned dietary regimens and sports activities. In addition, respondents were asked about political party preferences, life satisfaction, views on national goals and national achievements, and attitudes toward the Economic Community and its policies, especially the Economic Community's Common Agricultural Policy, the European Parliament, the creation of the Single Common Market in 1992, and use of daylight savings time. The data include demographic, socioeconomic, and geographic information on respondents.

1.3 Universe

The samples of Eurobarometer 29 are designed to be representative for the national population aged 15 years and over of the 12 European Community member countries, resident in and citizen of the respective country. Two separate samples have been drawn in the United Kingdom (Great Britain and Northern Ireland).

1.4 Sampling procedure

The sampling designs were either multi-stage national probability samples or national stratified quota samples. In each country a two stage sampling method is used:

1) Geographical distribution

The survey covers the whole territory of the twelve countries, i.e. 138 regions. In each country a random selection of sampling points is made in such a way that all types of area (urban, rural, etc.) are represented in proportion of their populations. The interviews are distributed in more or less 1.350 sampling points.

2) Choice of respondents

Within these sampling points the individuals to be interviewed are chosen:

a) at random from the population or electoral lists in those countries where access to suitable lists of individuals or households is possible: Denmark, Luxembourg, Netherlands;

b) by quota sampling in Belgium, France, Italy, United Kingdom and Ireland. In these cases the quota are established by sex, age and occupation on the basis of census data.

c) by a 'random route' procedure in Germany, Greece, Spain and Portugal.

The effective number of realized interviews in this round is indicated in table 1.

1.5 Fieldwork

The institutes which carried out the surveys in each E.E.C. country are represented by THE EUROPEAN OMNIBUS SURVEYS s.c. (EOS), co-ordination and data integration were realised by FAITS ET OPINION, Paris (Hélène Riffault).

1.6 Mode of data collection

Interviewing and sampling were conducted by various research firms operating in the e.e.c. countries. All interviews were carried out face-to-face in people's homes in the respective national languages. Faits et Opinions developed equivalent French and English questionnaires for this Eurobarometer. These questionnaires were translated into other languages by the firms responsible for interviewing in each country.

1.7 Weighting

In general the Eurobarometer datasets provide for two types of weighting, a post-stratification sample weighting and a population size weighting.

The **post-stratification weight**, also referred to as redressment or non-response weight, carries out comparisons between the sample composition and a proper universe description with respect to selected attributes such as sex, age or region. The availability of this weight over time and for individual countries is documented in table 2. Until Eurobarometer 31 the corresponding variable is labelled NATION WEIGHT II. Only starting with Eurobarometer 32 post-stratification weights are available continuously and for all samples.

Until Eurobarometer 6 underrepresented rural cases for FRANCE are duplicated; duplicate case indicators (weights) are only available for ECS1970, ECS1971 and Eurobarometer 2. In ECS1971 and ECS1973 a special weighting factor for the NETHERLANDS indicates the number of times that a case is duplicated in the Dutch part of the dataset; the duplication scheme is not documented.

The **population size weighting** factor corrects for the fact that sample sizes do not depend on how large or small the populations are from which they are drawn.

The NATION WEIGHT I (or UK weight) ensures that both samples, Great Britain and Northern Ireland, are

represented in proportion to its population size within the United Kingdom as a whole. Starting with Eurobarometer 19 the UK weight also includes the available post-stratification weighting factors for other countries.

The EUROPEAN WEIGHT adjusts each sample in proportion to its share in the total population, aged 15 and over, of the European Community as a whole in its respective composition. Only starting with Eurobarometer 7 the EUROPEAN WEIGHT includes the available post-stratification weighting factors. Starting with Eurobarometer 32 former states in the enlargement process are also considered (EU6, EU10).

The post-stratification weights are at the users' disposal for descriptive (univariate) analysis. Population size weighting is required to obtain meaningful descriptive results for the United Kingdom or the European Community as a whole. For multivariate analysis weighting is not recommended. Official Eurobarometer reports are based on weighted data.

The YOUTH OVERSAMPLES* in Eurobarometer 17 and 28.1 are weighted separately and across ALL samples as documented in the respective study and weight variable description.

Eurobarometer 29 contains both weighted and self-weighting (unweighted) national samples. Weighted samples are Denmark, Spain, Germany, France, Netherlands and United Kingdom. Self-Weighting samples are Belgium, Italy, Luxembourg, Ireland, Portugal and Greece. The weighted samples require the application of weights to make them representative of the countries from which they were drawn. The self-weighting samples do not require adjustment by weights for individual country analyses.

Three weight variables are provided in this dataset: Nation Weight I (Variable 6), Nation Weight II (Variable 8), and European Weight (Variable 9).

Nation Weight I contains weights that adjust the weighted samples to make them representative of the countries from which they were drawn. Nation Weight I equals one for all respondents who were interviewed in countries with self-weighting samples. This weight variable should be used whenever countries with weighted samples are to be analyzed separately.

Nation Weight II allows for separate analyses of Great Britain and Northern Ireland. The weights assigned to respondents in Great Britain produce a representative sample for Great Britain alone instead of the United Kingdom as a whole. No weights need be applied to separately analyze Northern Ireland, since the sample selected there was self-weighting. Thus, this weight variable equals one for all respondents in Northern Ireland. For all other countries outside the United Kingdom, Nation Weight II is identical to Nation Weight I, except for some very slight differences due to rounding.

European Weight contains weights that adjust each national sample in proportion to its nation's share in the total population of all the European Community countries. This weight variable also incorporates the within-country weighting information contained in Nation Weight I. European Weight may be used to analyze the European Community nations as a whole.

1.8 Data preparation

The data received by ICPSR from Faits et Opinions were checked for missing and duplicate records, for illegal (wild) codes and for consistency of response patterns. Errors discovered by these procedures were corrected or

noted in this codebook. Indices and other derived summary variables were also checked and corrected as necessary. Complete machine-readable documentation was also created for this dataset by ICPSR.

To facilitate analyses of the data, ICPSR consolidated into a single variable information that was originally spread out over two or more variables in the *Faits et Opinions* dataset. Seven variables containing condensed information were created by ICPSR for this Eurobarometer: Nation II, region, province and the four party preference variables: vote intention, vote probe, party last vote and ire/nire:party preference. Users should be aware that ICPSR's process of condensing information sometimes produces coding schemes that differ from those in earlier Eurobarometers.

In addition, some "inappropriate" codes were added by ICPSR to indicate intentionally skipped questions when it could be determined that the appropriate skip instruction in the *Faits et Opinions* questionnaire was adhered to for every respondent.

Users should note that *Faits et Opinions* has often represented answers to a question by a series of binary "dummy" variables (i.e. variables which take on values of one and zero only) without making provision for "don't know" or "no answer" responses. Occasionally, other residual responses, such as "none of the above," also are not represented in the data. Except for recoding with "inappropriate" codes, as described above, ICPSR has not recoded these "dummy" variables to indicate residual responses. Consequently, users will have to devise their own methods to filter them out.

Users should also note that on occasion the number of responses to a particular question may exceed the maximum indicated in the interviewer instructions.

Question text and contingency text appearing in this codebook and ICPSR's machine-readable documentation is taken from *Faits et Opinions'* English language version of the questionnaire. Coding schemes and other documentation are based on *Faits et Opinions'* English language version of the questionnaire, *Faits et Opinions'* codebook (in French) for its dataset received by ICPSR and an OSIRIS dictionary provided by Ronald Inglehart for the same *Faits et Opinions* dataset. Whenever a discrepancy occurs between *Faits et Opinions'* codebook and its English language questionnaire as to the coding scheme of a variable, the former is followed by ICPSR in its documentation.

2 Eurobarometer Series Description

2.1 Series name

The Standard and Special Eurobarometer (a.k.a. Euro-Barometer) Survey Series

2.2 Series information

The Standard and Special Eurobarometer surveys are the products of a unique program of cross-national and cross-temporal survey research. The effort began in early 1970, when the Commission of the European Communities sponsored simultaneous surveys of the publics of the European Community. In general they are carried out in spring and fall of each year. Three pilot studies were conducted in 1970, 1971 and 1973 under the header of European Communities Studies; "Attitudes towards Europe" (GESIS id ZA0078), the very first comparative survey across European Communities founder members in 1962, can be seen as an early forerunner. The primary data of the first explicit Eurobarometer, conducted in spring 1974, have not been preserved.

2.3 Principal investigators and institutional background

The Eurobarometer program was initially launched and managed until 1986 by Jacques-René Rabier, head of the Commission's press and information directorate and afterwards special advisor to the Commission of the European Communities. He counted with the political support of the European Parliament and the close co-operation of Ronald Inglehart. The political scientist at the University of Michigan was then developing his theory of value change in modern societies and his materialist/post-materialist items would become integral part of the Eurobarometer until the mid nineties. Between 1987 and 1996 the program was continued and considerably enlarged under the direction of Karlheinz Reif, since 1993 together with Anna Melich.

Anna Melich took over the Eurobarometer direction from 1997 to 1999, by then still within the organizational framework of the former Directorate-General X, Public Opinion Surveys and Research Unit. In 2000/2002 Eurobarometer were intermittently conducted in the framework of the DG Education and Culture, Citizens' Centre - Analysis of Public Opinion under the direction of Harald Hartung, and starting with Eurobarometer 54 under DG Press and Communication, initially directed by Thomas Christensen. Since 1999 the organisation and supervision of the surveys were consecutively executed by Rubén Mohedano-Brèthes (until 2002) and Renaud Soufflot de Magny (until 2006), with Antonis Papcostas as head of unit between 2003 and 2010.

The main survey results are regularly published on the European Commission's Public Opinion website in official standard and special topic reports.

2.4 Development of geographical and population coverage

In all European Union (formerly "European Communities") member countries Standard Eurobarometer samples were initially drawn among the national population, aged 15 and over. Starting with Eurobarometer 41.1 the target population is the population of any nationality of an European Union member country, aged 15 years and over, resident in any of the Member States. For test purposes Eurobarometer 41.0 included a non-national European Union citizens oversample.

Eurobarometer regularly include all member countries, starting with the six founder members and in accordance with the subsequent enlargement process. Norway has been in-officially included in selected waves between 1989 (EB34) and 1996 (EB46), Finland started before the actual enlargement in 1993 (EB39.0), and a few Swiss Eurobarometer were run in parallel to selected waves or topics starting in 1999 (EB51.1) in Switzerland. Candidate Countries (CC) and Accession Countries (AC) for the Eastern enlargement process were first surveyed in the Candidate Countries Eurobarometer series (2001-2004) and then all included in the standard series, even before accession as in the cases of Turkey or Macedonia.

Additional samples are drawn for Great Britain and Northern Ireland almost from the start, in Germany (East and West) after the re-unification in 1989, and in Cyprus for the Turkish Cypriote Community (Northern Cyprus) since 2004 for selected standard and topical waves.

The regular standard sample size (in the sense of completed interviews) in Eurobarometer surveys is 1000 respondents per country, except small countries like Luxembourg or Malta. The 44.2bis MEGA-survey increased the standard sample up to 6000 respondents (for the largest countries) in order to achieve more confidence for analysis on sub-national level.

Oversamples have been drawn intermittently if required by the topic, i.e. to ensure that there are enough members of the relevant population subgroup to report sufficiently reliable estimates. Intentionally more people are selected from the respective group than would typically be done if everyone in the sample had an equal chance of being selected.

2.5 Standard question program and special topics

Standard Eurobarometer surveys were designed to provide a regular monitoring of the social and political attitudes among the European publics, to obtain regular readings of support for European integration, public awareness of and attitudes toward European unification, the institutions of the European Community / European Union, and its policies in complementary fashion. Attitudes toward the organization and role of the European Parliament and electoral behavior became a major topic in pre- and post- European Elections times. The standard program was complemented by measures of general socio-political orientations, of subjective satisfaction and the perceived quality of life, or of cultural, national and European identities.

Intermittently Standard Eurobarometer have investigated SPECIAL TOPICS, such as agriculture, biotechnology, energy, environment, family planning, gender roles, health related issues, immigration, poverty and social exclusion, regional identity, science and technology, information society, working conditions, urban traffic, knowledge of languages etc. In the case of some supplementary studies, special youth and elderly samples have been drawn (see table 4).

Starting with Eurobarometer 34 (1990) additional supplementary surveys on special issues have been conducted under each main wave number, identified by dot-separated sub-numbers for each individual survey. Usually only one survey per main wave includes the standard and trend module with focus on European integration issues. The following list (table 5) identifies the surveys containing the standard module and with results reported in the corresponding official standard report, or which at least include a subset of standard indicators, or with focus on European integration in a special topic context (e.g. "The future of Europe" in Eurobarometer 65.1).

3 Dataset structure and standards

Standard and Special Eurobarometer are processed and documented by the Inter-university Consortium for Political and Social Research (ICPSR) and by the GESIS Data Archive department in accordance with agreed standards, which may in some details diverge from the usual ICPSR or GESIS archive standards. In addition and as long as reasonable it was adhered to standards once established for the Eurobarometer series in the course of the years.

3.1 Dataset structure

In general the variable structure of the analysis dataset is aligned to the basic bilingual questionnaire, preceded by a set of technical variables. These comprise the archive identification variables (archive study and version id), the survey identification variables (wave and unique respondent id), and several standard NATION variables identifying the different samples (countries or regions) and relevant groups of samples in the dataset with the corresponding WEIGHT variables provided by the fieldwork institutes (see 1.7). A special alphanumeric NATION variable is provided based on the ISO 3166 country code standard for the purpose of breaking down variables by sample in terms of clearly summarized cross-tabulations.

The questionnaire variables usually consist of three types, the substantial questions (Q), the Eurobarometer standard demographics (D) and the interview protocol variables (P). The dataset is concluded by constructed index variables (C), usually as provided by the fieldwork institute, by a questionnaire SPLIT variable if applicable, and by further original identification variables.

Variable names consist of the standard prefix 'V' and the consecutive variable number, except ISOCNTRY and VERSION variables if subsequently added to older datasets. Variable labels are standardized in the sense that they provide keywords based on the question text and that these keywords are applied consistently if questions or question items are repeated over time (trend variables). Variable label may include abbreviations if required, e.g. limitations regarding the length of variable labels in older versions of statistical analysis software. Starting with Eurobarometer 33 the variable labels include the respective question number as a reference to the basic bilingual questionnaire.

3.2 Coding frames

By general rule, the variables adopt the coding frame as specified in the basic bilingual questionnaire, except multiple response questions (see 1.8), questions with country specific answer categories and missing values.

3.2.1 Country specific answer categories

Eurobarometer include some questions (variables) with country specific answer categories like INCOME, SIZE OF COMMUNITY, REGION or variables related to VOTING BEHAVIOUR with reference to POLITICAL PARTIES. Until Eurobarometer 48 only one integrated variable is supplied with each category representing country specific meanings (e.g. geographic regions) which are not documented within the analysis dataset by means of value labels, but only in the extended variable description in the variable report. Starting with Eurobarometer 49 the integrated variables are retained but complemented by completely labeled country specific variables. The country specific coding schemes and categories are maintained as a standard over time as long as the category schemes

provided in the questionnaire are remain comparable.

Special attention is given to the coding of POLITICAL PARTIES in voting behavior variables such as VOTE INTENTION or LAST VOTE based on a standard coding scheme, originally developed for the Eurobarometer by Ronald Inglehart.

Starting with Euro-Barometer 2 the coding of this variable has been standardized following an approximate ordering of each country's political parties along a "left" to "right" continuum in the first digit of the codes. Parties coded 01-39 are generally considered on the "left", those coded 40-49 in the "centre", and those coded 60-89 on the "right" of the political spectrum. Parties coded 50-59 cannot be readily located in the traditional meaning of "left" and "right". The second digit of the codes is not significant to the "left-right" ordering. Codes 90-99 contain the response "other party" and various missing data responses. Major "party families" like the Social Democrats or Conservatives have been assigned identical values across countries, if possible.

From Eurobarometer 69.2 onwards, the "party family" harmonization approach has been sharpened following and updating the coding scheme developed by ZEUS for the Mannheim Eurobarometer Trend File. This ZEUS Code of Party Families is country specific, i.e. the categories have different meanings for different countries. It has three digits: The first represents the party family, the second and third identify an individual party in this family. Individual parties are coded consistently over time. The assignment of parties to families is done according to their overall ideological orientations.

Table 6: ZEUS Party Family Code (slightly modified)

Category		Party Family
0	(001-099)	not affiliated / electoral alliances across "families"
1	(100-199)	Communists
2	(200-299)	Socialists
3	(300-399)	Liberals
4	(400-499)	Christian Democrats
5	(500-599)	Conservatives
6	(600-699)	Extreme Rights / Nationalists
7	(700-799)	Regionalists / Ethnic
8	(800-899)	Environmental parties
9	(900-949)	Agricultural parties
9	(950-989)	other special issue parties (e.g. Eurosceptics) and independents
	990	other (spontaneous)
	994	not voting age
	995	empty ballot (blank) or invalid vote
	996	not voted / would not vote
	997	Refused
	998	DK / DK+NA if NA not coded separately
	999	INAP (inappropriate)

If available, the former standard category used up to Eurobarometer 61 is always referenced in the variable description. Due to general changes in party systems and to the ideological development of individual political

parties, the assignment of parties to party families cannot claim general validity. Users may modify these codings or part of these codings in order to suit their specific needs.

3.2.2 Missing values

In general missing value codes are defined in accordance with the standard once established for the Eurobarometer series, in particular the default use of whatever value supplied by the basic questionnaire for DK ("don't know") responses, unless a standard coding scheme is applied for demographic or protocol variables. The value 0 is applied for NA (i.e. "not ascertained" resp. "no answer") and the value 9 (99, 999, ...) for INAP (i.e. "inappropriate" resp. "not applicable"). If one of these values falls into the valid range of codes, the missing values are shifted to the next available missing value code or "level", e.g. if 0 is used in a dichotomous variable (NOT MENTIONED), value 9 is used for NA, respectively value 8 if value 9 is already used for INAP. If necessary the corresponding two- or more digit codes are used (99, 999, 98, 998 ...). Recently separate missing values are coded for INAP depending on whether the respondent was not asked a question due to questionnaire routing (filter non-response) or whether the question was not provided for in the country's field questionnaire. Other missing values (e.g. REFUSAL) are coded with the in each case next available code (e.g. 7, 97, 997, ...). In the analysis data set these codes are by default declared and treated as USER MISSING, but may be modified by the user to suit specific needs.

3.3 International documentation standard

The variable documentation is set up in accordance with the international metadata specifications for the social and behavioural sciences, established by the Data Documentation Initiative <DDI>. The variable reports are based on the XML representation of DDI version 2. The documentation combines the exact wording and sequence of question components (question text, interviewer instruction, response categories, etc.) from the basic bilingual (master) questionnaire with the variable description (variable name, values, and labels) of the analysis dataset. General remarks and comments referring to a certain variable are defined as variable notes. Notes can be references to trend (comparability) information, standards applied for coding frames, problems in questionnaire translation, but also references to data problems or other specific characteristics.

4 Explanation of the variable documentation

The variable documentation part describes each variable in the analysis data file in terms of relevant metadata and frequency distributions. The variable documentation is set up by means of the GESIS Dataset Documentation Manager (DSDM) and in accordance with international metadata standards (DDI-Codebook/XML).

In general, the following abbreviations are used to indicate countries or (sub-national) areas. As far as applicable, the ISO 3166-1 alpha-2 country codes have been applied and coded accordingly in the alphanumeric sample identification variable (NATION – ALL SAMPLES ISO 3166).

AT	Austria	HR	Croatia
BE	Belgium	HU	Hungary
BG	Bulgaria	IE	Ireland
CY	Cyprus	IT	Italy
CY-TCC	Turkish Cypriote Community	LT	Lithuania
CZ	Czech Republic	LU	Luxembourg
DE	Germany (–1989)	LV	Latvia
DE-W	Germany West (1990 ff.)	MK	Macedonia (FYROM)
DE-E	Germany East (1990 ff.)	MT	Malta
EE	Estonia	NL	The Netherlands
ES	Spain	PL	Poland
FI	Finland	PT	Portugal
FR	France	RO	Romania
GB	United Kingdom	SE	Sweden
GB-GBN	Great Britain	SI	Slovenia
GB-NIR	Northern Ireland	SK	Slovakia
GR	Greece	TR	Turkey

The example explained below reproduces the information appearing in the variable documentation part for a typical substantive variable. Results are usually broken down by country (sample) or represented by frequency counts in the case of country specific variables. In the case of variables with long lists of coded “real” values (e.g. age), results are only presented for the corresponding categorized variable, if available. The content and construction of technical, administrative or other generated variables is described as appropriate.

The frequencies for substantive variables are calculated on the base of weighted data, as indicated with each table and in accordance with the European Commission’s official Eurobarometer reports. Typically the sample specific post-stratification (redressment) weight is applied (WEIGHT RESULT FROM TARGET or NATION WEIGHT II). Due to rounding, users may find slightly different figures if using other statistical packages, especially if the number of cases is very low.

The complete question and answer texts are taken from the English language part of the respective basic bilingual questionnaire (master questionnaire) as provided by the coordinating fieldwork institute.

CROSS-TABULATION: The absolute frequencies of the occurrence of values (<i>absolute values</i>) refer to the number of cases in the weighted dataset as indicated, in this case <i>weighted by V8</i> . The relative frequencies (<i>row percent</i>) refer to the valid cases (<i>n valid sum</i>), i.e. the total number of cases (<i>n sum</i>) reduced by the number of cases defined as missing data (<i>M</i>). For display and place saving reasons excluded countries or areas may be completely dropped from the table.																																																																																																																																																																																																																																																																																																																																																					
FREQUENCY COUNTS: For country specific variables relative frequencies are calculated in- and excluding missing data (<i>M</i>), i.e. <i>percent</i> on the basis of all cases (<i>sum</i>) and <i>valid percent</i> on the basis of the <i>valid cases</i> .																																																																																																																																																																																																																																																																																																																																																					

5 Variable Documentation

Variable, Label

Question Text (English Language)

v1 - ARCHIVE STUDY NUMBER

ARCHIVE STUDY NUMBER

THE RESPECTIVE ARCHIVE HAS ATTACHED THIS NUMBER AS A UNIQUE DATA COLLECTION IDENTIFICATION NUMBER.

v1

Value	Label	Missing	Count	Percent	Valid Percent
1714			11729	100.0	100.0
	Sum		11729	100.0	100.0

v2 - ICPSR EDITION NUMBER

ICPSR EDITION NUMBER - 1

THE NUMBER IDENTIFYING THE RELEASE EDITION OF THE DATA COLLECTION.

1 1ST ICPSR ED. / ZA RELEASE 31-10-2007

Note:

Please see variable VERSION ("GESIS ARCHIVE VERSION") for further information on the version number of this data set and the corresponding release date.

v2

Value	Label	Missing	Count	Percent	Valid Percent

	Sum		11729	100.0	100.0
	Valid Cases		11729		

version - GESIS ARCHIVE VERSION

VERSION AND RELEASE DATE OF THE ARCHIVE DATA SET

This variable identifies the GESIS archive version number of this data set and the corresponding release date, recorded as an alphanumeric string. The version number is composed of a sequence of three numbers. The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases), the minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels), and the third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

On occasion of the implementation of this versioning scheme (2010-04-13), the default version number 1.0.0 has been created automatically for this Eurobarometer.

Version 1.0.1 adds the crosstabulation variable ISOCNTRY and the VERSION variable and makes minor errata corrections which are documented on variable level, if applicable.

Former version or edition identification variables are maintained unchanged as a reference to former releases.

v4 - ICPSR SEQUENTIAL RESPONDENT ID

ICPSR SEQUENTIAL CASE IDENTIFICATION NUMBER

ICPSR HAS ATTACHED A SEQUENTIAL IDENTIFICATION NUMBER TO EVERY CASE. THIS NUMBER UNIQUELY IDENTIFIES EACH RECORD IN THE DATA COLLECTION.

isocntry - NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)

NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)

All surveyed countries and regions, i.e. including separate samples for East- / West-Germany, Great Britain / Northern Ireland, and the Turkish Cypriot Community (TCC), are coded in accordance with the ISO 3166-1-alpha-2 country code, if available. ISO 3166-2 is applied for the United Kingdom subdivisions. ISO standard codes are not available for the "historical" East / West subdivision of Germany (DE-E / DE-W) and for the Turkish Cypriot Community in northern Cyprus (CY-TCC), the internationally not recognized "Turkish Republic of Northern Cyprus".

v6 - NATION WEIGHT 1

NATION WEIGHT I (GREAT BRITAIN AND NORTHERN IRELAND TOGETHER)

THIS VARIABLE CONTAINS NATIONAL (WITHIN-COUNTRY) WEIGHTS FOR DENMARK, SPAIN, GERMANY, FRANCE, NETHERLANDS, AND THE UNITED KINGDOM. FOR RESPONDENTS IN OTHER COUNTRIES, IT EQUALS ONE. THIS WEIGHT VARIABLE SHOULD BE USED WHEN COUNTRIES ARE ANALYZED SEPARATELY. (SEE INTRODUCTION, WEIGHTING INFORMATION)

v8 - NATION WEIGHT 2

NATION WEIGHT II (GREAT BRITAIN AND NORTHERN IRELAND SEPARATE)

THIS WEIGHT VARIABLE ALLOWS FOR SEPARATE ANALYSES OF RESPONDENTS IN GREAT BRITAIN AND NORTHERN IRELAND: RESPONDENTS IN GREAT BRITAIN ARE ASSIGNED WEIGHTING FACTORS REPRESENTING GREAT BRITAIN ALONE INSTEAD OF THE UNITED KINGDOM AS A WHOLE. EACH RESPONDENT IN NORTHERN IRELAND IS ASSIGNED A WEIGHT EQUAL TO ONE. FOR COUNTRIES OTHER THAN THE UNITED KINGDOM, NATION WEIGHT II IS THE SAME AS NATION WEIGHT I EXCEPT FOR SOME SLIGHT DIFFERENCES DUE TO ROUNDING. (SEE INTRODUCTION, WEIGHTING INFORMATION)

Note:

ACTUAL NUMBER IS CODED

v9 - EUROPEAN WEIGHT

EUROPEAN WEIGHT

THIS IS A WEIGHT VARIABLE WHICH ADJUSTS EACH NATIONAL SAMPLE IN PROPORTION TO ITS NATION'S SHARE IN THE TOTAL POPULATION OF E.C. EUROPEAN WEIGHT ALSO INCORPORATES THE WITHIN-COUNTRY WEIGHTING INFORMATION CONTAINED IN NATION WEIGHT I. IT SHOULD BE USED WHEN ANALYZING THE E.C. AS A WHOLE. (SEE INTRODUCTION, WEIGHTING INFORMATION)

0 DID NOT GIVE AN INITIAL NEGATIVE RESPONSE

1 GAVE AN INITIAL NEGATIVE RESPONSE

Note:

QUESTION 129/134 IS AN OPEN ENDED QUESTION, THE ANSWERS TO WHICH HAVE BEEN CLASSIFIED INTO 50 CATEGORIES ACCORDING TO THEIR CONTENT AND POSITIVE OR NEGATIVE ORIENTATION. RESPONSES TO THIS QUESTION ARE REPRESENTED IN THE DATA BY TWO SERIES OF "DUMMY" VARIABLES EACH OF WHICH COMPRISES 25 VARIABLES CORRESPONDING TO THESE CATEGORIES. THE FIRST SERIES, CATEGORIES 1 TO 21 AND 43 TO 46, REPRESENTS THE "FIRST RESPONSE" TO Q.129/134. THE NEXT SERIES, CATEGORIES 22 TO 42 AND 47 TO 50, REPRESENT THE "TOTAL RESPONSES," I.E. ALL RESPONSES REGARDLESS OF THEIR ORDER OF MENTION.

THIS VARIABLE INDICATES WHETHER OR NOT THE FIRST RESPONSE HAS BEEN CATEGORIZED AS A NEGATIVE RESPONSE REGARDING THE COMMUNITY.

v342 - Q320 EUROP UNIFICATION VS NAT IDENTITY

Q.320

THERE IS A LOT OF TALK ABOUT WHAT THE COUNTRIES IN THE EUROPEAN COMMUNITY HAVE IN COMMON AND WHAT DISTINGUISHES THEM FROM ONE ANOTHER.

(SHOW CARD OF OPINIONS AND THE SEVEN POINTS)

SOME SAY (A) : IF ONE DAY THE COUNTRIES OF EUROPE WERE REALLY UNITED, THIS WOULD MARK THE END OF OUR NATIONAL HISTORIC, CULTURAL IDENTITY AND OUR OWN NATIONAL ECONOMIC INTERESTS WOULD BE SACRIFICED.

OTHERS SAY (B) : THE ONLY WAY OF PROTECTING OUR NATIONAL HISTORIC, CULTURAL IDENTITIES AND OUR NATIONAL ECONOMIC INTERESTS AGAINST A CHALLENGE POSED BY THE GREAT WORLD POWERS IS FOR THE COUNTRIES OF EUROPE TO BECOME TRULY UNITED.

DO YOU FEEL NEARER TO THE FIRST OR THE SECOND OF THESE OPINIONS? PLEASE INDICATE WHERE YOU STAND BY CHOOSING ONE OF THE BOXES ON THIS SCALE

Note:

Danish respondents who declared for political party "Venstre" (VOTE INTENTION) had been coded as falling into the missing value category during the raw data processing. The original coding has been made available by Danish Gallup via Danish Data Archives, and ZA recoded accordingly. Since April 1994, the ZA version of the ICPSR data set also contains the complete vote intention data for

Denmark. The codebook documentation has been corrected for ZA deliveries after March 15, 1999.

v442 - OPINION LEADERSHIP - COG MOB INDEX I

COGNITIVE MOBILIZATION INDEX (1)

- 1 LOW COGNITIVE MOBILIZATION
- 2 MEDIUM-LOW COGNITIVE MOBILIZATION
- 3 MEDIUM-HIGH COGNITIVE MOBILIZATION
- 4 HIGH COGNITIVE MOBILIZATION

Derivation:

THIS VARIABLE COMBINES RESPONSES TO Q.127 (THE RESPONDENT'S PROPENSITY TO PERSUADE) AND Q.128 (FREQUENCY OF POLITICAL DISCUSSIONS) TO FORM AN INDICATOR OF AN INDIVIDUAL'S POTENTIAL TO TAKE AN ACTIVE ROLE IN THE POLITICAL PROCESS.

CODE 1: CODED 3, 4 OR 0 FOR Q.127 AND 3 OR 0 FOR Q.128

CODE 2: CODED 3, 4 OR 0 FOR Q.127 AND 2 FOR Q.128; OR CODED 1 OR 2 FOR Q.127 AND 3 OR 0 FOR Q.128

CODE 3: CODED 3, 4 OR 0 FOR Q.127 AND 1 FOR Q.128; OR CODED 1 OR 2 FOR Q.127 AND 2 FOR Q.128

CODE 4: CODED 1 OR 2 FOR Q.127 AND 1 FOR Q.128

FOR A COMPLETE DISCUSSION OF THIS VARIABLE AND ITS CORRELATES, SEE RONALD INGLEHART, THE SILENT REVOLUTION: CHANGING VALUES AND POLITICAL STYLES AMONG WESTERN PUBLICS (PRINCETON UNIVERSITY PRESS, 1977), CHAPTER 11. THIS VARIABLE IS LABELLED THE OPINION LEADERSHIP INDEX IN THE CODEBOOKS FOR EURO-BAROMETERS 3, 4, 5, AND 6.

v451 - VALUE ORIENTATION POST-MAT GLOBAL
IN DEPTH POST-MATERIALISM INDEX

0 MATERIALIST

1

2

3

4

5

6 POST-MATERIALIST

Derivation:

ICPSR HAS RECREATED THIS VARIABLE THROUGH USE OF DOCUMENTATION RECEIVED FROM FAITS ET OPINION. ITEMS USED TO CONSTRUCT THIS VARIABLE WERE Q.136 TO Q.144 (VARIABLES 61 TO 69). RESPONSES TO THESE QUESTIONS WERE FIRST ARRANGED BASED ON A POST/MAT RANKING.

POST-MATERIALIST ITEMS

3 - MORE SAY IN HOW THINGS ARE DONE

6 - MORE SAY IN GOVERNMENT DECISIONS

8 - FREEDOM OF SPEECH

11 - HUMANE SOCIETY

12 - IDEAS COUNT

MATERIALIST ITEMS

1 - ECONOMIC GROWTH

2 - STRONG DEFENSE

5 - MAINTAINING ORDER

7 - FIGHTING RISING PRICES

9 - STABLE ECONOMY

10 - FIGHTING CRIME

NEUTRAL ITEM

4 - MORE BEAUTIFUL CITIES AND COUNTRYSIDE

ICPSR'S INTERPRETATION OF THE CONSTRUCTION PROCESS FOLLOWS:

FIRST STAGE

VARIABLE USED: Q.142-144

EACH RESPONDENT WAS GIVEN A BASIC SCORE OF 0.

IF TWO POST-MATERIALIST ITEMS WERE CHOSEN IN THE FIRST AND SECOND PLACE (Q.142/143) THE RESPONDENT RECEIVED AN ADDITIONAL SCORE OF +2.

IF ONLY ONE OF THE TWO ITEMS CHOSEN IN THE FIRST AND SECOND PLACE (Q.142/143) WERE POST-MATERIALIST THE RESPONDENT RECEIVED AN ADDITIONAL SCORE OF +1.

IF THE LEAST IMPORTANT ITEM (Q.144) CHOSEN WAS A MATERIALIST ITEM THE RESPONDENT RECEIVED AN

ADDITIONAL SCORE OF +1.

SECOND STAGE

THE CLASSIFICATION OF THESE ITEMS (MATERIALIST OR POST-MATERIALIST) WAS THE SAME AS IN THE FIRST STAGE WITH THE EXCEPTION THAT RESPONSE 4 BECAME A POST-MATERIALIST ITEM.

VARIABLE USED: Q.136/137

POST-MATERIALIST ITEMS (RESPONSES 3 AND 4 ABOVE)

MATERIALIST ITEMS (RESPONSES 1 AND 2 ABOVE)

VARIABLE USED: Q.138/139

POST-MATERIALIST ITEMS (RESPONSES 6 AND 8 ABOVE)

MATERIALIST ITEMS (RESPONSES 5 AND 7 ABOVE)

VARIABLE USED: Q.140/141

POST-MATERIALIST ITEMS (RESPONSES 11 AND 12 ABOVE)

MATERIALIST ITEMS (RESPONSES 9 AND 10 ABOVE)

IF TWO POST-MATERIALIST ITEMS WERE CHOSEN IN THE SECONDSTAGE BY THE RESPONDENT, AN ADDITIONAL SCOREOF +1 WAS ADDED TO THAT PERSON'S STAGE 1 TOTAL SCORE.

IF TWO MATERIALIST ITEMS WERE CHOSEN IN THE SECOND STAGE BY A RESPONDENT, AN ADDITIONAL SCORE OF-1 WAS ADDED TO THAT PERSON'S STAGE 1 TOTAL SCORE.

CONSTRUCTION OF THE FINAL SCORE

THE ITEMS WERE THEN SUMMED AND ALL NEGATIVE SCORES AT THIS POINT WERE SET TO THE BASE SCORE OF 0, GIVING THE FOLLOWING RANGE ON THE INDEX.
