Acknowledgements

Standard & Special Eurobarometer surveys are conducted on behalf of the Commission of the European Communities, under the responsibility of the Directorate-General Communication and on occasion requested by other departments according to the policy they deal with. From the outset the European Commission is generously granting access to Eurobarometer primary data for re-use in social science research and training.

The integrated original datasets and related materials are delivered by the respective survey research institute in charge of survey implementation and fieldwork co-ordination.

Ronald Inglehart (University of Michigan), collaborated in the design and analysis of the surveys and helped make the data available to the social science community through the Inter-university Consortium for Political and Social Research (ICPSR). Data cleaning and processing was supported by National Science Foundation grants.

Preparation and documentation of Eurobarometer primary data for long term preservation and usability happen in a cooperative arrangement between the teams at Inter-University Consortium for Political and Social Research (ICPSR) and GESIS Data Archive for the Social Sciences.

Introduction and preliminary remarks

The variable reports of the Standard & Special Eurobarometer survey series offer a comprehensive description of the data on study and variable level. For each Eurobarometer individual variable reports are provided. The reports are structured into five sections: Section one provides the description of the respective Eurobarometer Study, including bibliographic information, abstract, methodological specifications, remarks on weighting and general notes on data preparation. Section two gives an historical overview of the Eurobarometer Survey Series, including the institutional background and the development of geographical and topical coverage. A third section provides general information about the structure of Eurobarometer datasets, documentation standards and variable coding frames. Section four explains the details of the 'Variable Documentation' part in the following section five, which is the documentation of the variables with the complete question texts and answer categories of the master questionnaire and the corresponding archival remarks on data preparation or inconsistencies, if applicable. In addition, this variable report contains frequency counts, by country (sample), for almost all variables. These frequencies are based on weighted data using the adequate post-stratification weight, if applicable and as indicated in each table.

Data access

Primary data for statistical analysis and related documentation (basic bilingual questionnaires, national field questionnaire versions and variable reports) are made available online by GESIS (<http://zacat.gesis.org>), by the Inter-university Consortium for Political and Social Research through the ICPSR membership network, and through all Social Science Data Archives members of the Council of European Social Science Data Archives (CESSDA).

Usage requirement

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about related research activities, users of the data are requested to send to ICPSR or GESIS respectively bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data (surveys and respective variables) were used.

Disclaimer

The original collector of the data, ICPSR, GESIS, and the relevant funding agencies bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

1.1.4 Bibliographic citation

Publications based on data collections which are made available through ICPSR or GESIS, should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications. The bibliographic citation for this data collection is:

Commission of the European Communities, Brussels: Eurobarometer 26, September–November 1986.

Helene Riffault, Faits et Opinions, Paris [Producer];

GESIS, Cologne [Publisher]: ZA1544, dataset version 1.0.1, doi:10.4232/1.10883.

1.2 Content

1.2.1 Abstract

This data collection focuses on a variety of energy problems and transportation-related issues affecting citizens of the nations comprising the European Economic Community. As in previous studies in this series, respondents' attitudes toward the Community, life satisfaction, and social goals continued to be monitored. All respondents were queried on such topics as the seriousness of energy problems in their countries, future energy needs, and the risks associated with various industrial installations. Respondents were also asked about the development and use of nuclear power stations for the production of electricity and whether they had heard of the nuclear power plant accident in the Soviet Union in the spring of 1986. Respondents who held a current driver's license were questioned about the size and type of vehicle driven most often, how frequently they drove, and whether or not they used a safety belt. In addition, the respondent's political orientation, outlook for the future, and socioeconomic and demographic characteristics were recorded.

1.2.2 Topic classification

- International Institutions, Relations
- Technology, Energy
- Branches of Economy

1.3 Universe

The samples of Eurobarometer 26 are designed to be representative for the national population aged 15 years and over of the 12 European Community member countries, resident in and citizen of the respective country. Two separate samples have been drawn in the United Kingdom (Great Britain and Northern Ireland).

1.4 Sampling procedure

The sampling designs were either multi-stage national probability samples or national stratified quota samples. In each country a two stage sampling method is used:

1) Geographical distribution

The survey covers the whole territory of the twelve countries, i.e. 138 regions. In each country a random selection of sampling points is made in such a way that all types of area (urban, rural, etc.) are represented in proportion of their populations. The interviews are distributed in more or less 1.350 sampling points.

2) Choice of respondents

Within these sampling points the individuals to be interviewed are chosen:

a) at random from the population or electoral lists in those countries where access to suitable lists of individuals or households is possible: Denmark, Luxembourg, Netherlands;

b) by quota sampling in Belgium, France, Italy, United Kingdom and Ireland. In these cases the quota are established by sex, age and occupation on the basis of census data.

c) by a 'random route' procedure in Germany, Greece, Spain and Portugal.

The effective number of realized interviews in this round is indicated in table 1.

1.5 Fieldwork

The institutes which carried out the surveys in each E.E.C. country are represented by THE EUROPEAN OMNIBUS SURVEYS s.c. (EOS), co-ordination and data integration were realised by FAITS ET OPINION, Paris (Hélène Riffault).

1.6 Mode of data collection

Interviewing and sampling were conducted by various research firms operating in the e.e.c. countries. All interviews were carried out face-to-face in people's homes in the respective national languages. Faits et Opinions developed equivalent French and English questionnaires for this Eurobarometer. These questionnaires were translated into other languages by the firms responsible for interviewing in each country.

1.7 Weighting

In general the Eurobarometer datasets provide for two types of weighting, a post-stratification sample weighting and a population size weighting.

The **post-stratification weight**, also referred to as redressment or non-response weight, carries out comparisons between the sample composition and a proper universe description with respect to selected attributes such as sex, age or region. The availability of this weight over time and for individual countries is documented in table 2. Until Eurobarometer 31 the corresponding variable is labelled NATION WEIGHT II. Only starting with Eurobarometer 32 post-stratification weights are available continuously and for all samples.

Until Eurobarometer 6 underrepresented rural cases for FRANCE are duplicated; duplicate case indicators (weights) are only available for ECS1970, ECS1971 and Eurobarometer 2. In ECS1971 and ECS1973 a special weighting factor for the NETHERLANDS indicates the number of times that a case is duplicated in the Dutch part of the dataset; the duplication scheme is not documented.

The **population size weighting** factor corrects for the fact that sample sizes do not depend on how large or small the populations are from which they are drawn.

The **NATION WEIGHT 1** (or **UK weight**) ensures that both samples, Great Britain and Northern Ireland, are represented in proportion to its population size within the United Kingdom as a whole. Starting with Eurobarometer 19 the UK weight also includes the available post-stratification weighting factors for other countries.

The **EUROPEAN WEIGHT** adjusts each sample in proportion to its share in the total population, aged 15 and over, of the European Community as a whole in its respective composition. Only starting with Eurobarometer 7 the EUROPEAN WEIGHT includes the available post-stratification weighting factors. Starting with Eurobarometer 32 former states in the enlargement process are also considered (EU6, EU10).

The post-stratification weights are at the users' disposal for descriptive (univariate) analysis. Population size weighting is required to obtain meaningful descriptive results for the United Kingdom or the European Community as a whole. For multivariate analysis weighting is not recommended. Official Eurobarometer reports are based on weighted data.

The YOUTH OVERSAMPLES* in Eurobarometer 17 and 28.1 are weighted separately and across ALL samples as documented in the respective study and weight variable description.

The dataset for Eurobarometer 26 contains three separate weight variables.

In the administration of the Eurobarometers, samples of Great Britain and of Northern Ireland are drawn independently of each other. Thus, a weighting factor for the United Kingdom is necessary to maintain the representativeness of the United Kingdom sample. Some users, however, may prefer to treat Great Britain and Northern Ireland as separate entities in their analyses. Application of the United Kingdom Weighting Factor would not be desirable for these users, since very small n's for Northern Ireland would be produced. We have therefore provided two Nation Weights and two corresponding nation i.d. variables.

Both of the Nation Weights (Var. Nos. 6 and 8) adjust the French, Dutch, German, Danish and Spanish samples to produce representative samples for each of these countries.

Variable 6 (Nation Weight I) also adjusts the Great Britain and Northern Ireland samples to produce a representative sample of the United Kingdom. "Nation I" (Var. No. 5) is the nation i.d. variable to be used in conjunction with this weight variable, since it contains a single code for all respondents in the United Kingdom. In Var. No. 8 the data collections from Great Britain and Northern Ireland are treated as independent samples. The Great Britain sample was still weighted to produce a representative sample of Britain. The Northern Ireland sample, on the other hand, was not weighted (i.e., given a weight of '1'). Variable 7 (Nation II) should be used with this weight, since it contains separate code categories for respondents from Great Britain and Northern Ireland.

This dataset also contains a European Weight, Var. No. 9, which produces a representative sample of the European Community as a whole when used in analysis. This variable adjusts each national sample according to each nation's contribution to the population of the European Community. This variable also adjusts the French, Dutch, German, Danish, United Kingdom and Spanish samples to produce internal representative samples for these countries.

The unweighted n of the file is 11,837. Application of Nation Weight I produces a weighted n of 11,836.99. Unlike the original ICPSR version of this codebook the subsequently inserted frequencies are based on

unweighted data.

1.8 Data preparation

The data received by the ICPSR archive from *Faits et Opinions* were first sorted and checked for missing or duplicate records. The data were then checked for illegal (wild) codes and inconsistencies were recoded to appropriate values or missing data. The region, province, income, size of place, and party preference variables were then constructed from individual variables. Users should be aware that this process produced geographic and income coding schemes for some countries that are not in all cases comparable to those in earlier Eurobarometers. Machinereadable documentation was created for the dataset, including frequency tables weighted by the nation weight. Indices were included as created by the original investigators.

The English language questionnaire was used in constructing the codebook documentation.

For a small set of variables, the coding scheme in this codebook does not match the English questionnaire. These variables were constructed using the original code specifications provided to ICPSR by *Fait et Opinions*.

2 Eurobarometer Series Description

2.1 Series name

The Standard and Special Eurobarometer (a.k.a. Euro-Barometer) Survey Series

2.2 Series information

The Standard and Special Eurobarometer surveys are the products of a unique program of cross-national and cross-temporal survey research. The effort began in early 1970, when the Commission of the European Communities sponsored simultaneous surveys of the publics of the European Community. In general they are carried out in spring and fall of each year. Three pilot studies were conducted in 1970, 1971 and 1973 under the header of European Communities Studies; "Attitudes towards Europe" (GESIS id ZA0078), the very first comparative survey across European Communities founder members in 1962, can be seen as an early forerunner. The primary data of the first explicit Eurobarometer, conducted in spring 1974, have not been preserved.

2.3 Principal investigators and institutional background

The Eurobarometer program was initially launched and managed until 1986 by Jacques-René Rabier, head of the Commission's press and information directorate and afterwards special advisor to the Commission of the European Communities. He counted with the political support of the European Parliament and the close co-operation of Ronald Inglehart. The political scientist at the University of Michigan was then developing his theory of value change in modern societies and his materialist/post-materialist items would become integral part of the Eurobarometer until the mid nineties. Between 1987 and 1996 the program was continued and considerably enlarged under the direction of Karlheinz Reif, since 1993 together with Anna Melich.

Anna Melich took over the Eurobarometer direction from 1997 to 1999, by then still within the organizational framework of the former Directorate-General X, Public Opinion Surveys and Research Unit. In 2000/2002 Eurobarometer were intermittently conducted in the framework of the DG Education and Culture, Citizens' Centre - Analysis of Public Opinion under the direction of Harald Hartung, and starting with Eurobarometer 54 under DG Press and Communication, initially directed by Thomas Christensen. Since 1999 the organisation and supervision of the surveys were consecutively executed by Rubén Mohedano-Brêthes (until 2002) and Renaud Soufflot de Magny (until 2006), with Antonis Papcostas as head of unit between 2003 and 2010.

The main survey results are regularly published on the European Commission's Public Opinion website in official standard and special topic reports.

2.4 Development of geographical and population coverage

In all European Union (formerly "European Communities") member countries Standard Eurobarometer samples were initially drawn among the national population, aged 15 and over. Starting with Eurobarometer 41.1 the target population is the population of any nationality of an European Union member country, aged 15 years and over, resident in any of the Member States. For test purposes Eurobarometer 41.0 included a non-national European Union citizens oversample.

Eurobarometer regularly include all member countries, starting with the six founder members and in accordance

with the subsequent enlargement process. Norway has been in-officially included in selected waves between 1989 (EB34) and 1996 (EB46), Finland started before the actual enlargement in 1993 (EB39.0), and a view Swiss Eurobarometer were run in parallel to selected waves or topics parallel surveys were starting in 1999 (EB51.1) in Switzerland. Candidate Countries (CC) and Accession Countries (AC) for the Eastern enlargement process were first surveyed in the Candidate Countries Eurobarometer series (2001–2004) and then all included in the standard series, even before accession as in the cases of Turkey or Macedonia.

Additional samples are drawn for Great Britain and Northern Ireland almost from the start, in Germany (East and West) after the re-unification in 1989, and in Cyprus for the Turkish Cypriote Community (Northern Cyprus) since 2004 for selected standard and topical waves.

		Norway	NO	1000	

The regular standard sample size (in the sense of completed interviews) in Eurobarometer surveys is 1000 respondents per country, except small countries like Luxembourg or Malta. The 44.2bis MEGA-survey increased the standard sample up to 6000 respondents (for the largest countries) in order to achieve more confidence for analysis on sub-national level.

Oversamples have been drawn intermittently if required by the topic, i.e. to ensure that there are enough members of the relevant population subgroup to report sufficiently reliable estimates. Intentionally more people are selected from the respective group than would typically be done if everyone in the sample had an equal chance of being selected.

Table 4: Oversamples for special topic Eurobarometer

Topic	(Over-)Sample	Eurobarometer Survey
Young Europeans	Youth aged 15-24	17, 28.1, 34.2, 47.2OVR, 55.1OVR
Elderly Europeans	Elderly aged 60+	37.2
Consumer Behaviour	Responsible for shopping	41.0
Unemployment	Unemployed	44.3OVR
Working Conditions	Professionally active	37.0+1, 39.0+1
Drug Abuse	Youth aged 15-24	43.0+1, 57.2OVR
Education Issues	Youth aged 15-24	44.0 / 44.1 (data not integrated)

2.5 Standard question program and special topics

Standard Eurobarometer surveys were designed to provide a regular monitoring of the social and political attitudes among the European publics, to obtain regular readings of support for European integration, public awareness of and attitudes toward European unification, the institutions of the European Community / European Union, and its policies in complementary fashion. Attitudes toward the organization and role of the European Parliament and electoral behavior became a major topic in pre- and post- European Elections times. The standard program was complemented by measures of general socio-political orientations, of subjective satisfaction and the perceived quality of life, or of cultural, national and European identities.

Intermittently Standard Eurobarometer have investigated SPECIAL TOPICS, such as agriculture, biotechnology, energy, environment, family planning, gender roles, health related issues, immigration, poverty and social exclusion, regional identity, science and technology, information society, working conditions, urban traffic, knowledge of languages etc. In the case of some supplementary studies, special youth and elderly samples have been drawn (see table 4).

Starting with Eurobarometer 34 (1990) additional supplementary surveys on special issues have been conducted under each main wave number, identified by dot-separated sub-numbers for each individual survey. Usually only one survey per main wave includes the standard and trend module with focus on European integration issues. The following list (table 5) identifies the surveys containing the standard module and with results reported in the corresponding official standard report, or which at least include a subset of standard indicators, or with focus on European integration in a special topic context (e.g. "The future of Europe" in Eurobarometer 65.1).

Table 5: Overview of Eurobarometer surveys with standard EU and trend question modules

Standard and trend surveys	Fieldwork Dates	GESIS ID	Standard Report	Special topic	Subset
Eurobarometer 34.0	Oct–Nov 1990	ZA1960	X

Further and regularly updated information on the Eurobarometer survey series is provided through the GESIS Eurobarometer Data Service micro-site: <http://www.gesis.org/eurobarometer>

3 Dataset structure and standards

Standard and Special Eurobarometer are processed and documented by the Inter-university Consortium for Political and Social Research (ICPSR) and by the GESIS Data Archive department in accordance with agreed standards, which may in some details diverge from the usual ICPSR or GESIS archive standards. In addition and as long as reasonable it was adhered to standards once established for the Eurobarometer series in the course of the years.

3.1 Dataset structure

In general the variable structure of the analysis dataset is aligned to the basic bilingual questionnaire, preceded by a set of technical variables. These comprise the archive identification variables (archive study and version id), the survey identification variables (wave and unique respondent id), and several standard NATION variables identifying the different samples (countries or regions) and relevant groups of samples in the dataset with the corresponding WEIGHT variables provided by the fieldwork institutes (see 1.7). A special alphanumeric NATION variable is provided based on the ISO 3166 country code standard for the purpose of breaking down variables by sample in terms of clearly summarized cross-tabulations.

The questionnaire variables usually consist of three types, the substantial questions (Q), the Eurobarometer standard demographics (D) and the interview protocol variables (P). The dataset is concluded by constructed index variables (C), usually as provided by the fieldwork institute, by a questionnaire SPLIT variable if applicable, and by further original identification variables.

Variable names consist of the standard prefix 'V' and the consecutive variable number, except ISOCNTRY and VERSION variables if subsequently added to older datasets. Variable labels are standardized in the sense that they provide keywords based on the question text and that these keywords are applied consistently if questions or question items are repeated over time (trend variables). Variable label may include abbreviations if required, e.g. limitations regarding the length of variable labels in older versions of statistical analysis software. Starting with Eurobarometer 33 the variable labels include the respective question number as a reference to the basic bilingual questionnaire.

3.2 Coding frames

By general rule, the variables adopt the coding frame as specified in the basic bilingual questionnaire, except multiple response questions (see 1.8), questions with country specific answer categories and missing values.

3.2.1 Country specific answer categories

Eurobarometer include some questions (variables) with country specific answer categories like INCOME, SIZE OF COMMUNITY, REGION or variables related to VOTING BEHAVIOUR with reference to POLITICAL PARTIES. Until Eurobarometer 48 only one integrated variable is supplied with each category representing country specific meanings (e.g. geographic regions) which are not documented within the analysis dataset by means of value labels, but only in the extended variable description in the variable report. Starting with Eurobarometer 49 the integrated variables are retained but complemented by completely labeled country specific variables. The country specific coding schemes and categories are maintained as a standard over time as long as the category schemes

provided in the questionnaire are remain comparable.

Special attention is given to the coding of POLITICAL PARTIES in voting behavior variables such as VOTE INTENTION or LAST VOTE based on a standard coding scheme, originally developed for the Eurobarometer by Ronald Inglehart.

Starting with Euro-Barometer 2 the coding of this variable has been standardized following an approximate ordering of each country's political parties along a "left" to "right" continuum in the first digit of the codes. Parties coded 01-39 are generally considered on the "left", those coded 40-49 in the "centre", and those coded 60-89 on the "right" of the political spectrum. Parties coded 50-59 cannot be readily located in the traditional meaning of "left" and "right". The second digit of the codes is not significant to the "left-right" ordering. Codes 90-99 contain the response "other party" and various missing data responses. Major "party families" like the Social Democrats or Conservatives have been assigned identical values across countries, if possible.

From Eurobarometer 69.2 onwards, the "party family" harmonization approach has been sharpened following and updating the coding scheme developed by ZEUS for the Mannheim Eurobarometer Trend File. This ZEUS Code of Party Families is country specific, i.e. the categories have different meanings for different countries. It has three digits: The first represents the party family, the second and third identify an individual party in this family. Individual parties are coded consistently over time. The assignment of parties to families is done according to their overall ideological orientations.

Table 6: ZEUS Party Family Code (slightly modified)

Category		Party Family
0	(001-099)	not affiliated / electoral alliances across "families"
1	(100-199)	Communists
2	(200-299)	Socialists
3	(300-399)	Liberals
4	(400-499)	Christian Democrats
5	(500-599)	Conservatives
6	(600-699)	Extreme Rights / Nationalists
7	(700-799)	Regionalists / Ethnic
8	(800-899)	Environmental parties
9	(900-949)	Agricultural parties
9	(950-989)	other special issue parties (e.g. Eurosceptics) and independents
	990	other (spontaneous)
	994	not voting age
	995	empty ballot (blank) or invalid vote
	996	not voted / would not vote
	997	Refused
	998	DK / DK+NA if NA not coded separately
	999	INAP (inappropriate)

If available, the former standard category used up to Eurobarometer 61 is always referenced in the variable description. Due to general changes in party systems and to the ideological development of individual political

parties, the assignment of parties to party families cannot claim general validity. Users may modify these codings or part of these codings in order to suit their specific needs.

3.2.2 Missing values

In general missing value codes are defined in accordance with the standard once established for the Eurobarometer series, in particular the default use of whatever value supplied by the basic questionnaire for DK ("don't know") responses, unless a standard coding scheme is applied for demographic or protocol variables. The value 0 is applied for NA (i.e. "not ascertained" resp. "no answer") and the value 9 (99, 999, ...) for INAP (i.e. "inappropriate" resp. "not applicable"). If one of these values falls into the valid range of codes, the missing values are shifted to the next available missing value code or "level", e.g. if 0 is used in a dichotomous variable (NOT MENTIONED), value 9 is used for NA, respectively value 8 if value 9 is already used for INAP. If necessary the corresponding two- or more digit codes are used (99, 999, 98, 998 ...). Recently separate missing values are coded for INAP depending on whether the respondent was not asked a question due to questionnaire routing (filter non-response) or whether the question was not provided for in the country's field questionnaire. Other missing values (e.g. REFUSAL) are coded with the in each case next available code (e.g. 7, 97, 997, ...). In the analysis data set these codes are by default declared and treated as USER MISSING, but may be modified by the user to suit specific needs.

3.3 International documentation standard

The variable documentation is set up in accordance with the international metadata specifications for the social and behavioural sciences, established by the Data Documentation Initiative <DDI>. The variable reports are based on the XML representation of DDI version 2. The documentation combines the exact wording and sequence of question components (question text, interviewer instruction, response categories, etc.) from the basic bilingual (master) questionnaire with the variable description (variable name, values, and labels) of the analysis dataset. General remarks and comments referring to a certain variable are defined as variable notes. Notes can be references to trend (comparability) information, standards applied for coding frames, problems in questionnaire translation, but also references to data problems or other specific characteristics.

4 Explanation of the variable documentation

The variable documentation part describes each variable in the analysis data file in terms of relevant metadata and frequency distributions. The variable documentation is set up by means of the GESIS Dataset Documentation Manager (DSDM) and in accordance with international metadata standards (DDI-Codebook/XML).

In general, the following abbreviations are used to indicate countries or (sub-national) areas. As far as applicable, the ISO 3166-1 alpha-2 country codes have been applied and coded accordingly in the alphanumeric sample identification variable (NATION – ALL SAMPLES ISO 3166).

AT	Austria	HR	Croatia
BE	Belgium	HU	Hungary
BG	Bulgaria	IE	Ireland
CY	Cyprus	IT	Italy
CY-TCC	Turkish Cypriote Community	LT	Lithuania
CZ	Czech Republic	LU	Luxembourg
DE	Germany (–1989)	LV	Latvia
DE-W	Germany West (1990 ff.)	MK	Macedonia (FYROM)
DE-E	Germany East (1990 ff.)	MT	Malta
EE	Estonia	NL	The Netherlands
ES	Spain	PL	Poland
FI	Finland	PT	Portugal
FR	France	RO	Romania
GB	United Kingdom	SE	Sweden
GB-GBN	Great Britain	SI	Slovenia
GB-NIR	Northern Ireland	SK	Slovakia
GR	Greece	TR	Turkey

The example explained below reproduces the information appearing in the variable documentation part for a typical substantive variable. Results are usually broken down by country (sample) or represented by frequency counts in the case of country specific variables. In the case of variables with long lists of coded "real" values (e.g. age), results are only presented for the corresponding categorized variable, if available. The content and construction of technical, administrative or other generated variables is described as appropriate.

The frequencies for substantive variables are calculated on the base of weighted data, as indicated with each table and in accordance with the European Commission's official Eurobarometer reports. Typically the sample specific post-stratification (redressment) weight is applied (WEIGHT RESULT FROM TARGET or NATION WEIGHT II). Due to rounding, users may find slightly different figures if using other statistical packages, especially if the number of cases is very low.

The complete question and answer texts are taken from the English language part of the respective basic bilingual questionnaire (master questionnaire) as provided by the coordinating fieldwork institute.

CROSS-TABULATION: The absolute frequencies of the occurrence of values (<i>absolute values</i>) refer to the number of cases in the weighted dataset as indicated, in this case <i>weighted by V8</i> . The relative frequencies (<i>row percent</i>) refer to the valid cases (<i>n valid sum</i>), i.e. the total number of cases (<i>n sum</i>) reduced by the number of cases defined as missing data (<i>M</i>). For display and place saving reasons excluded countries or areas may be completely dropped from the table.																																																																																																																																																																																																																																																																																																																																																					
FREQUENCY COUNTS: For country specific variables relative frequencies are calculated in- and excluding missing data (<i>M</i>), i.e. <i>percent</i> on the basis of all cases (<i>sum</i>) and <i>valid percent</i> on the basis of the <i>valid cases</i> .																																																																																																																																																																																																																																																																																																																																																					

5 Variable Documentation

Variable, Label

Question Text (English Language)

v1 - ARCHIVE STUDY NUMBER

ARCHIVE STUDY NUMBER

v1

Value	Label	Missing	Count	Percent	Valid Percent
1544			11837	100.0	100.0
	Sum		11837	100.0	100.0
	Valid Cases		11837		

v2 - ICPSR EDITION NUMBER

ICPSR EDITION NUMBER

THE NUMBER IDENTIFYING THE RELEASE EDITION OF THIS DATASET.

1 WINTER, 1989 RELEASE

Note:

Please see variable VERSION ("GESIS ARCHIVE VERSION") for further information on the version number of this data set and the corresponding release date.

v2

Value	Label	Missing	Count	Percent	Valid Percent
1	1st ICPSR ed; GESIS-ZA release 05-11-2007		11837	100.0	100.0
	Sum		11837	100.0	100.0
	Valid Cases		11837		

version - GESIS ARCHIVE VERSION

VERSION AND RELEASE DATE OF THE ARCHIVE DATA SET

This variable identifies the GESIS archive version number of this data set and the corresponding release date, recorded as an alphanumeric string. The version number is composed of a sequence of three numbers. The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases), the minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels), and the third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

On occasion of the implementation of this versioning scheme (2010-04-13), the default version number 1.0.0 has been created automatically for this Eurobarometer.

Version 1.0.1 adds the crosstabulation variable ISOCNTRY and the VERSION variable to the otherwise unchanged data set.

Former version or edition identification variables are maintained unchanged as a reference to former releases.

version

Value	Label	Missing	Count	Percent	Valid Percent
1.0.1 (2012-07-01)			11837	100.0	100.0
	Sum		11837	100.0	100.0
	Valid Cases		11837		

v3 - ICPSR PART NUMBER

ICPSR PART NUMBER

THE NUMBER IDENTIFYING THIS PART OF A 1-PART STUDY.

v3

Value	Label	Missing	Count	Percent	Valid Percent
1			11837	100.0	100.0
	Sum		11837	100.0	100.0
	Valid Cases		11837		

v4 - RESPONDENT ID - APPOINTED BY ICPSR
RESPONDENT IDENTIFICATION NUMBER

isocntry - NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)

NATION - ALL SAMPLES ISO 3166 (CROSSTABULATION VARIABLE)

All surveyed countries and regions, i.e. including separate samples for East- / West-Germany, Great Britain / Northern Ireland, and the Turkish Cypriot Community (TCC), are coded in accordance with the ISO 3166-1-alpha-2 country code, if available. ISO 3166-2 is applied for the United Kingdom subdivisions. ISO standard codes are not available for the "historical" East / West subdivision of Germany (DE-E / DE-W) and for the Turkish Cypriot Community in northern Cyprus (CY-TCC), the internationally not recognized "Turkish Republic of Northern Cyprus".

v5 - NATION I (UNITED KINGDOM)

NATION (OF INTERVIEW, WITH A SINGLE CODE FOR U.K.)

THIS IS A TWELVE CATEGORY VARIABLE WHICH CONTAINS ONE CODE FOR EACH MEMBER NATION OF THE EUROPEAN COMMUNITY. THIS NATION I.D. VARIABLE SHOULD BE USED IN CONJUNCTION WITH NATION WEIGHT I (VAR. NO. 6). FOR A THIRTEEN CATEGORY VARIABLE WHICH SEPARATES RESPONDENTS IN NORTHERN IRELAND FROM THOSE IN GREAT BRITAIN, SEE VAR. NO. 7.

- 1 FRANCE
- 2 BELGIUM
- 3 NETHERLANDS
- 4 GERMANY
- 5 ITALY
- 6 LUXEMBOURG
- 7 DENMARK
- 8 IRELAND
- 9 UNITED KINGDOM
- 10 GREECE

v6 - NATION WEIGHT I (INCL UK WEIGHT)

NATION WEIGHT I, INCORPORATING THE U.K. WEIGHT FACTOR

THIS WEIGHT ADJUSTS THE FRENCH, DUTCH, GERMAN, DANISH, UNITED KINGDOM, AND SPANISH SAMPLES TO PRODUCE REPRESENTATIVE SAMPLES FOR EACH OF THESE COUNTRIES. THIS WEIGHT SHOULD BE USED IN CONJUNCTION WITH VAR. NO. 5 (NATION I). (SEE INTRODUCTION, WEIGHTING INFORMATION).

Note:

ACTUAL NUMBER IS CODED

v7 - NATION II (GB AND NORTHERN IRELAND)

NATION (OF INTERVIEW, WITH TWO CODES FOR U.K.)

THIS IS A THIRTEEN CATEGORY NATION VARIABLE WHICH ASSIGNS SEPARATE CODES TO RESPONDENTS IN GREAT BRITAIN AND NORTHERN IRELAND. THIS VARIABLE SHOULD BE USED IN CONJUNCTION WITH NATION WEIGHT II (VAR. NO. 8). FOR A TWELVE CATEGORY VARIABLE CORRESPONDING TO THE MEMBER NATIONS OF THE EUROPEAN COMMUNITY, SEE VAR. NO. 5.

- 1 FRANCE
- 2 BELGIUM
- 3 NETHERLANDS
- 4 GERMANY
- 5 ITALY
- 6 LUXEMBOURG
- 7 DENMARK
- 8 IRELAND
- 9 GREAT BRITAIN
- 10 NORTHERN IRELAND
- 11 GREECE

	Valid Cases		11837		

v8 - NATION WEIGHT II (F NL D DK GB E)

NATION WEIGHT II, WITHOUT THE U.K. WEIGHT FACTOR

THIS WEIGHT ADJUSTS THE FRENCH, DUTCH, GERMAN, DANISH, BRITISH AND SPANISH SAMPLES TO PRODUCE REPRESENTATIVE SAMPLES FOR EACH OF THESE COUNTRIES. NORTHERN IRISH RESPONDENTS ARE SEPARATED FROM BRITISH RESPONDENTS AND ARE NOT WEIGHTED. THEREFORE, THIS WEIGHT SHOULD BE USED IN CONJUNCTION WITH VAR. NO. 7 (NATION II). (SEE INTRODUCTION, WEIGHTING INFORMATION).

Note:

ACTUAL NUMBER IS CODED

v9 - EUROPEAN WEIGHT

EUROPEAN WEIGHT

THIS WEIGHT PRODUCES A REPRESENTATIVE SAMPLE OF THE EUROPEAN COMMUNITY AS A WHOLE BY ADJUSTING EACH NATIONAL SAMPLE ACCORDING TO EACH NATION'S CONTRIBUTION TO THE POPULATION OF THE EUROPEAN COMMUNITY. THIS VARIABLE ALSO ADJUSTS THE FRENCH, DUTCH, GERMAN, DANISH, UNITED KINGDOM AND SPANISH SAMPLES TO PRODUCE INTERNAL REPRESENTATIVE SAMPLES FOR THESE COUNTRIES. (SEE INTRODUCTION, WEIGHTING INFORMATION).

Note:

ACTUAL NUMBER IS CODED

v10 - ELECTORAL REGISTER

Q.138

ARE YOU...(NATIONALITY)? IF YES, DO YOU KNOW WHETHER YOUR NAME APPEARS IN THE ELECTORAL REGISTER (THE REGISTER OF PEOPLE ENTITLED TO VOTE AT THE NEXT GENERAL ELECTION), UNDER YOUR PRESENT ADDRESS, AT ANOTHER ADDRESS OR DOES NOT APPEAR AT ALL?

- 0 DK/NA
- 1 AT PRESENT ADDRESS
- 2 AT ANOTHER ADDRESS
- 3 DON'T KNOW IF REGISTERED
- 4 DOES NOT APPEAR AT ALL
- 5 NO ANSWER

v126 - ENERGY PROBLEM - POLICY PREFERENCE

Q.258

THINKING OF (YOUR COUNTRY) FUTURE ENERGY NEEDS, THERE ARE DIFFERENT WAYS OF HANDLING THE PROBLEM OF GETTING THE FUELS WE WANT, AND A CHOICE HAS TO BE MADE. AMONG THE FOLLOWING, WHICH IS THE BEST POLICY?

(READ OUT)

0 DK/NA

1 THE CHEAPEST PRICE EVEN IF IT MAKES US MORE DEPENDENT ON FOREIGN SUPPLIES

2 BE AS INDEPENDENT AS POSSIBLE OF FOREIGN SUPPLIES EVEN IF IT COSTS MORE

3 MINIMIZE POLLUTION, EVEN IF IT COSTS MORE OR MAKES US MORE DEPENDENT ON FOREIGN SUPPLIES

v152 - NUCLEAR RISKS: EXPLOSION OF PLANT

Q.275

AGAIN, ABOUT DANGERS, I AM GOING TO MENTION CERTAIN DANGERS WHICH PEOPLE SOMETIMES MENTION WHEN TALKING ABOUT NUCLEAR POWER STATIONS. WHICH OF THESE DANGERS DO YOU BELIEVE ONE MAY HAVE REASON TO SERIOUSLY WORRY ABOUT?

(READ OUT)

Q.275_A ... THE EXPLOSION OF THE NUCLEAR POWER STATION

0 NOT MENTIONED

v214 - INCOME HH

WE WOULD LIKE TO ANALYZE THE SURVEY RESULTS ACCORDING TO THE INCOME OF PERSONS INTERVIEWED. SHOW INCOME CARD: HERE IS A SCALE OF INCOMES AND WE WOULD LIKE TO KNOW IN WHAT GROUP YOUR FAMILY IS, COUNTING ALL WAGES, SALARIES, PENSIONS AND ANY OTHER INCOME THAT COMES IN. JUST GIVE ME THE NUMBER OF THE GROUP YOUR HOUSEHOLD FALLS INTO BEFORE TAX AND OTHER DEDUCTIONS.

in France (FR):

- 0 DK/NA
- 1 LESS THAN 3,000 FRANCS PER MONTH
- 2 3,000-3,999 FRANCS

v227 - COGNITIVE MOBILIZATION INDEX 1

COGNITIVE MOBILIZATION INDEX (1)

- 1 LOW COGNITIVE MOBILIZATION
- 2 MEDIUM-LOW COGNITIVE MOBILIZATION
- 3 MEDIUM-HIGH COGNITIVE MOBILIZATION
- 4 HIGH COGNITIVE MOBILIZATION

Derivation:

THIS VARIABLE COMBINES RESPONSES TO Q.147 AND Q.148 TO FORM AN INDICATOR OF AN INDIVIDUAL'S POTENTIAL TO TAKE AN ACTIVE ROLE IN THE POLITICAL PROCESS.

CODE 1: CODED 3, 4 OR 0 IN Q.147 AND CODED 3 OR 0 IN Q.148

CODE 2: CODED 3, 4 OR 0 IN Q.147 AND CODED 2 IN Q.148 OR CODED 1 OR 2 IN Q.147 AND CODED 3 OR 0 IN Q.148

CODE 3: CODED 3, 4 OR 0 IN Q.147 AND CODED 1 IN Q.148 OR CODED 1 OR 2 IN Q.147 AND CODED 2 IN Q.148

CODE 4: CODED 1 OR 2 IN Q.147 AND CODED 1 IN Q.148

FOR A COMPLETE DISCUSSION OF THIS VARIABLE AND ITS CORRELATES, SEE RONALD INGLEHART, THE SILENT REVOLUTION: CHANGING VALUES AND POLITICAL STYLES AMONG WESTERN PUBLICS (PRINCETON UNIVERSITY PRESS, 1977), CHAPTER 11. THIS VARIABLE IS LABELLED THE OPINION LEADERSHIP INDEX IN BAROMETERS 3, 4, 5, AND 6.

v228 - VALUE ORIENTATION (POST-MATERIALISMUS)

MATERIALIST/POST-MATERIALIST VALUES INDEX

- 1 MATERIALIST
- 2 MIXED
- 3 POST-MATERIALIST
- 4 DK/NA

Derivation:

THIS INDEX WAS CONSTRUCTED FROM RESPONSES TO QUESTIONS 154 AND 155.

CODE 1: CODED 1 IN Q.154 AND 3 IN Q.155 OR 3 IN Q.154 AND 1 IN Q.155

CODE 2: CODED 1 OR 3 IN Q.154 AND 2 OR 4 IN Q.155 OR 2 OR 4 IN Q.154 AND 1 OR 3 IN Q.155

CODE 3: CODED 2 IN Q.154 AND 4 IN Q.155 OR 4 IN Q.154 AND 2 IN Q.155

CODE 4: CODED 0 IN EITHER Q.154 OR Q.155

FOR A COMPLETE DISCUSSION OF THIS VARIABLE, SEE RONALD INGLEHART, THE SILENT REVOLUTION: CHANGING VALUES AND POLITICAL STYLES AMONG WESTERN PUBLICS (PRINCETON UNIVERSITY PRESS, 1977).

v229 - POLITICAL ORIENTATION 7-POINT TYPOLOGY

POLITICAL ORIENTATION TYPOLOGY - SEVEN POINT SCALE

- 1 UNMOBILIZED MATERIALIST
- 2 UNMOBILIZED MIXED
- 3 UNMOBILIZED POST-MATERIALIST
- 4 MOBILIZED MATERIALIST
- 5 MOBILIZED MIXED
- 6 MOBILIZED POST-MATERIALIST
- 7 REVOLUTIONARY

Derivation:

THIS TYPOLOGY WAS CONSTRUCTED FROM RESPONDENT'S SCORES ON THE COGNITIVE MOBILIZATION INDEX 1(V227), THE MATERIALIST/POST-MATERIALIST VALUE INDEX (V228) AND RESPONSES TO V191.

CODE 1: CODED 1 OR 2 IN V227, 1 IN V228 AND 0, 2, OR 3 IN V191

CODE 2: CODED 1 OR 2 IN V227, 2 OR 4 IN V228 AND 0, 2 OR 3 IN V191

CODE 3: CODED 1 OR 2 IN V227, 3 IN V228 AND 0, 2 OR 3 IN V191

CODE 4: CODED 3 OR 4 IN V227, 1 IN V228 AND 0, 2 OR 3 IN V191

CODE 5: CODED 3 OR 4 IN V227, 2 OR 4 IN V228 AND 0, 2 OR 3 IN V191

CODE 6: CODED 3 OR 4 IN V227, 3 IN V228 AND 0, 2 OR 3 IN V191

CODE 7: CODED 1 IN V191

FOR DETAILS ON THE CONSTRUCTION OF THIS TYPOLOGY AND ITS CORRELATES, SEE RONALD INGLEHART AND JACQUES-RENE RABIER "ECONOMIC UNCERTAINTY AND EUROPEAN SOLIDARITY" ANNALS OF THE AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE (VOL. 440, 1978).

v231 - COGNITIVE MOBILIZATION INDEX 2

COGNITIVE MOBILIZATION INDEX (2)

- 1 (LOW)
- 2 (NEXT TO LOW)
- 3 (MIDDLE)
- 4 (NEXT TO HIGH)
- 5 (HIGH)

Derivation:

THIS VARIABLE COMBINES RESPONSES TO Q.148 AND V203. RESPONDENTS CODED 4, "STILL STUDYING," IN V203 WERE TREATED AS IF THEY FELL INTO THE CATEGORY FROM 1 THROUGH 3 IN V203 CORRESPONDING TO THEIR CURRENT AGE AS REPORTED IN V209.

CODE 1: CODED 0 OR 3 IN Q.148 AND 1 IN V203

CODE 2: CODED 2 IN Q.148 AND 1 IN V203; OR CODED 3 OR 0 IN Q.148 AND 2 IN V203

CODE 3: CODED 1 IN Q.148 AND 1 IN V203; OR CODED 2 IN Q.148 AND 2 IN V203; CODED 3 OR 0 IN Q.148 AND 3 IN V203

CODE 4: CODED 1 IN Q.148 AND 2 IN V203; OR CODED 2 IN Q.148 AND 3 IN V203

CODE 5: CODED 1 IN Q.148 AND 3 IN V203

v232 - POLITICAL MOBILIZATION INDEX

POLITICAL MOBILIZATION INDEX

- 1 (LOW)
- 2 (NEXT TO LOW)
- 3 (NEXT TO HIGH)
- 4 (HIGH)

Derivation:

THIS INDEX WAS CONSTRUCTED FROM RESPONSES RECORDED IN COGNITIVE MOBILIZATION INDEX 2 (V231) AND Q.356 (V196).

CODE 1: CODED 1 OR 2 IN V231 AND 4 OR 0 IN V196

CODE 2: CODED 1 OR 2 IN V231 AND 1-3 IN V196

CODE 3: CODED 3-5 IN V231 AND 4 OR 0 IN V196

CODE 4: CODED 3-5 IN V231 AND 1-3 IN V196
